Carmen Venegas,Anastasia Bougea,Yildiz Degirmenci,2025-08-19 Parkinson s disease PD is the fastest growing neurodegenerative disorder being prevalent in 1% of people aged above 65 years PD is characterized by dopaminergic neurons and the accumulation of alpha synuclein syn rich protein in Lewy bodies Although aging is the highest risk factor for developing PD the genetic predisposition and exposure to environmental factors such as herbicides or pesticides can induce oxidative stress DNA damage and neuronal death contributing to PD pathogenesis To date there is not a therapy to halt the disease Many studies have shown multiple altered pathways offering different approaches for developing an effective therapy however the current therapies are merely symptomatic and they include a substitution of dopamine by the administration of Levodopa the use of catechol O O methyltransferase inhibitors monoamine oxidase inhibitors or Dopamine agonist among others However these treatments can only relieve some of the symptoms they do not slow the progression of the disease and they have limited long term efficacy

Handbook of Computational Neurodegeneration Panagiotis Vlamos,Ilias S. Kotsireas,Ioannis Tarnanas,2023-07-25 The Handbook of Computational Neurodegeneration provides a comprehensive overview of the field and thus bridges the gap between standard textbooks of research on neurodegeneration and dispersed publications for specialists that have a narrowed focus on computational methods to study this complicated process The handbook reviews the central issues and methodological approaches related to the field for which the reader pursues a thorough overview It also conveys more advanced knowledge thus serving both as an introductory text and as a starting point for an in depth study of a specific area

as well as a quick reference source for the expert by reflecting the state of the art and future prospects The book includes topics that are usually missing in standard textbooks and that are only marginally represented in the specific literature The broad scope of this handbook is reflected by five major parts that facilitate an integration of computational concepts methods and applications in the study of neurodegeneration Each part is intended to stand on its own giving an overview of the topic and the most important problems and approaches which are supported by examples practical applications and proposed methodologies The basic concepts and knowledge standard procedures and methods are presented as well as recent advances and new perspectives

Molecular Medicine and Biomedical Research in the Era of Precision Medicine New Technologies and Personalized Drug Therapies for Patient Care provides researchers with an extensive overview of recent advances in molecular biology impacting the development of targeted therapies The book delivers insights into the pathobiological and pathogenetic mechanisms of various diseases providing a detailed study of the latest personalized interventions to be implemented across such conditions It covers a range of technologies including RNA sequencing AI Machine Learning gene therapy omics and nanotechnology delving into their clinical applications across various diseases The book also tackles targeted treatments of different disease types including acute chronic infectious and noncommunicable diseases Future perspectives are also covered providing an in depth study across molecular medicine drug discovery and delivery disease diagnosis and prevention and therapeutic interventions and acting as an invaluable interdisciplinary reference for researchers across the biomedical sciences Investigates the molecular basis and mechanisms of diseases including cardiovascular infectious and neurological diseases Presents molecular based therapeutics for personalized treatment and the diagnosis of various conditions Considers a range of technologies in the field of biomedicine and molecular medicine including artificial intelligence and nanotechnology

SPECT in Dementia Klaus P. Ebmeier,2003-01-01

Single photon emission computerized tomography SPECT is a relatively cheap and widely available instrument for the examination of brain perfusion cerebral blood flow and activity of neurotransmitter systems The European project SPECT in dementia sets out to overcome some of the factors holding back the development of clinical neuroimaging It has developed a methodology for combining results from different imaging centres at the same time making scan assessment more objective and powerful Moreover using objective voxel based methods of image analysis improves the diagnostic performance of less experienced clinicians and contributes to their training This publication gives an excellent general overview of the new methods of image analysis and sharing It is complemented by a systematic review of the diagnostic utility of SPECT in dementia and a cost effectiveness model of diagnostic improvements in Alzheimers disease This book is

essential reading for all scientists economists and clinicians in geriatric medicine neurology and psychiatry neuro radiology and nuclear medicine working with patients suffering from dementia and Alzheimer s disease who want to stay ahead in this rapid developing field

Parkinson's Disease, Second Edition Ronald F. Pfeiffer, Zbigniew K. Wszolek, Manuchair Ebadi, 2012-10-09 In recent years considerable advances have been made in our knowledge and understanding of Parkinson s disease PD In particular there has been an explosion of information regarding genetic contributions to the etiology of PD and an increased awareness of the importance of the non motor features of the disease Theories regarding the pathogenesis and pathophysiology of PD have also been refined and new treatment modalities and advances implemented Reflecting these changes this second edition features new chapters devoted to genetic aspects of PD non motor features of the disease and aspects of the pathophysiology pathogenesis and treatment of PD

Mild Cognitive Impairment: Influencing Factors and Intervention Effects Ying Wang, Jin-Tai Yu, Xinyi Cao, Guillermo Felipe, López Sánchez, 2024-07-16 As the aging population degree is deepened cognitive impairment has become a globally recognized public health problem As an intermediate state from normal cognition NC to Alzheimer s disease AD mild cognitive impairment MCI has a highly variable cognitive trajectory which contains three outcomes 1 progression to AD and other types of dementia 2 Maintaining stability 3 Reversal to NC Reversal of cognitive function can be achieved by taking positive and effective measures Current studies mostly focus on factors affecting MCI to AD World Health Organization and Alzheimer s Disease International have also proposed relatively mature guidelines for risk factors However there are still some influencing factors that have not yet formed a unified conclusion In addition there are fewer studies and no consensus on the influencing factors for MCI to NC Current forms of intervention for MCI are mainly non pharmacological interventions and there is a lack of randomized controlled trials with larger sample sizes and longer intervention periods to confirm the effect of pharmacological and non pharmacological interventions The purpose of this study is to explore the factors that influence the transition from MCI to AD or NC in aging adults and to examine how the influencing factors make the cognitive function of aging adults with MCI deteriorate improve or even reverse to NC and how are their reversal rates This includes effective measures proven through pharmacological and non pharmacological intervention studies and their impact on reversal Influence factors include but are not limited to demographic factors age socioeconomic status education lifestyle smoking alcohol consumption physical activity nutrition social participation mental health depression loneliness diseases hypertension diabetes sleep disorders biological markers amyloid tau protein and pharmacological factors cholinesterase inhibitor A monoclonal antibodies drugs to rebalance the gut flora etc and submission of research results based on

intervention trials is encouraged

Viral Impact on CNS: Mechanisms of Immune Dysfunction and Cognitive Decline, 2nd edition Thomas A. Angelovich, Sonia Mediouni, Bruce James Brew, Melissa Jayne Churchill, Jacob D. Estes, Robyn Klein, 2025-09-25 Viral infections pose significant threats to human health with many viruses capable of infiltrating the central nervous system CNS and causing severe consequences such as immune activation encephalitis and cognitive impairment Notable viruses like HIV EBV HCV JC virus CMV and the recent SARS CoV 2 have been linked to neurodegeneration and cognitive decline These viruses can impact the CNS through direct infection of CNS cells such as microglia astrocytes oligodendrocytes and neurons leading to altered cell homeostasis blood brain barrier damage and leukocyte recruitment Additionally systemic inflammation from viral infections outside the CNS can exacerbate or independently cause immune dysfunction in the brain Despite these insights the specific mechanisms and effects of many pathogens on the brain remain unclear This research topic seeks to consolidate current evidence on how viruses affect CNS homeostasis and cell function contributing to pathological outcomes It aims to identify potential similarities and differences in the mechanisms and effects of various viruses on the CNS with a focus on the long term impact on resident brain cells This research topic aims to elucidate the immunological consequences of viral infections on brain homeostasis and cognitive function By examining the effects of different viruses on the CNS the research seeks to uncover the mechanisms driving immune dysfunction and cognitive impairment The ultimate goal is to inform strategies for targeting

and eradicating viruses from the CNS thereby improving brain health for millions affected by viral infections annually To gather further insights into the immunological consequences of viral infections on brain homeostasis and cognitive impairment we welcome articles addressing but not limited to the following themes Studies assessing the effects of viruses including but not limited to HIV SARS CoV 2 Epstein Barr Virus and Zika virus on the central nervous system Basic mechanistic studies in vitro in vivo ex vivo exploring the effects of viral infection exposure or immune activation on CNS cell homeostasis and function Investigations into viral persistence in the CNS including mechanisms and consequences Clinical trials and case reports examining the effects of viral infection on immune activation in the brain
