Remediation Understanding New Media:

Remediation J. David Bolter, Richard Grusin, 1999 Remediation emphasises how all forms of media constantly borrow from and refashion other types of media The authors argue that the new media of the 90s pay homage to earlier forms and thereby achieve their own cultural significance Remediation Jay David Bolter, Richard Grusin, 2000-01-06 A new framework for considering how all media constantly borrow from and refashion other media Media critics remain captivated by the modernist myth of the new they assume that digital technologies such as the World Wide Web virtual reality and computer graphics must divorce themselves from earlier media for a new set of aesthetic and cultural principles In this richly illustrated study Jay David Bolter and Richard Grusin offer a theory of mediation for our digital age that challenges this assumption They argue that new visual media achieve their cultural significance precisely by paying homage to rivaling and refashioning such earlier media as perspective painting photography film and television They call this process of refashioning remediation and they note that earlier media have also refashioned one another photography remediated painting film remediated stage production and photography and television remediated film vaudeville and radio New Media Leah A. Interactive Media: The Semiotics of Embodied Interaction Shaleph O'Neill, 2008-09-18 The author discusses the existing theoretical approaches of semiotically informed research in HCI what is useful and the limitations He proposes a radical rethink to this approach through a re evaluation of important semiotic concepts and applied semiotic methods Using a semiotic model of interaction he explores this concept through several studies that help to develop his argument He concludes that this semiotics of interaction is more appropriate than other versions because it focuses on the characteristics of interactive media as they are experienced and the way in which users make sense of them rather than thinking about interface design or usability issues

The New Visibility of Religion Graham Ward, Michael Hoelzl, 2008-10-09 Since the late 1980s sociologists have been drawing our attention to an international surge in the public visibility of religion This has increasingly challenged two central aspects of modern western European culture first the assumption that as we became more modern we would become more secularised and religion would disappear and secondly that religion and politics should occupy radically differentiated spheres in which private conviction did not exert itself within the public realm The new visibility of religion is not simply a matter of what Keppel famously called *The Revenge of God* that is the resurgence of Christian Islamic and Jewish fundamentalism Religion is permeating western culture in many different forms from contemporary continental philosophy

the arts and the media to the rhetoric of international politicians This collection of essays brings together a unique collection of voices from theology aesthetics social and political science philosophy and cultural theory in an exploration of four major aspects of this new visibility of religion the revision of the secularisation thesis the relationship between religion and violence the new re enchantment of reality and the return of metaphysics The exploration is conducted through essays by and interviews with figures at the forefront of reflecting upon this major cultural shift and its implications It is distinctively multidisciplinary examining the phenomenon of the rise of religion in Western Europe from a number of interrelated perspectives

International Handbook of Internet Research Jeremy Hunsinger, Lisbeth Klastorp, Matthew Allen, 2010-06-17 Internet research spans many disciplines From the computer or information sciences through engineering and to social sciences humanities and the arts almost all of our disciplines have made contributions to internet research whether in the effort to understand the effect of the internet on their area of study or to investigate the social and political changes related to the internet or to design and develop software and hardware for the network The possibility and extent of contributions of internet research vary across disciplines as do the purposes methods and outcomes Even the epistemological underpinnings differ widely The internet then does not have a discipline of study for itself It is a field for research Baym 2005 an open environment that simultaneously supports many approaches and techniques not otherwise commensurable with each other There are of course some inhibitions that limit explorations in this field research ethics disciplinary conventions local and national norms customs laws borders and so on Yet these limits on the internet as a field for research have not prevented the rapid expansion and exploration of the internet After nearly two decades of research and scholarship the limits are a positive contribution providing bases for discussion and interrogation of the contexts of our research making internet research better for all These limits challenges that constrain the theoretically limitless space for internet research create boundaries that give definition to the field and provide us with a particular topography that enables research and investigation
