Renal Eicosanoids Michael Dunn,2013-11-22 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1990 *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 □□□□□□□□□□□□□□□□□□ ,1992 New Books in the Veterinary Medicine Library Ohio State University Libraries. Veterinary Medicine Library,1992 Analgesic and NSAID-induced Kidney Disease J. H. Stewart,1993 Analgesic nephropathy first recognized in 1950 was for two decades the most common cause of both acute and chronic renal failure in Australia and parts of Europe This comprehensive text traces the story of the disease from its early description to its ultimately successful prevention The etiology pathology diagnosis and treatment are described by those who have played leading roles in elucidating the nature of the disease and in persuading society to take effective measures to prevent its occurrence The second section describes those renal disorders resulting from the use of newer non steroidal anti inflammatory drugs and paracetamol disorders which are rising in frequency and may prove more difficult to prevent Finally the book considers the urothelial cancers caused by phenacitin containing headache powders a late outcome of analgesic abuse With contributions from a distinguished international group of authors this is a unique book on a challenging problem Throughout the text theory and practice are integrated and attention is drawn to the valuable lessons gained from the study of the analgesic nephropathies Copper Bioavailability and Metabolism C Kies,2012-12-06 Nutrition is truly a science of the 20th century That physiological disabilities could be caused by a lack of exogenous substances which could be supplied by foods is a concept of relatively recent origins It is not surprising therefore that until the last few years much of nutritional science research was tied to 1 establishing a cause and effect relationship between a physiological problem and its cure prevention by a chemical substance in food 2 quantifying the amount of the substance nutrient needed to prevent deficiency symptoms and 3 quantifying the amounts of nutrients found in various food substances That a nutrient might be present in apparently adequate amounts in foods consumed by an individual but could not be fully utilized because of the concurrent consumption of anti nutrients has been recognized as being an important problem as for example iodine deficiency goiters resulting from consumption of gOitrigenes That less specific less dramatic interactions among nutrients and among nutrients and other food components might enhance or inhibit the absorption of nutrients from the intestines or of the metabolism of nutrients within the body is an area of current concern Molecular Aspects of Development and Aging of the Nervous System Jean Lauder,2013-11-21 The rapidly expanding fields of molecular and cellular neurobiology are the newest frontiers of neuroscience This book represents the continuing efforts of the Institute of Developmental Neuroscience and Aging IDNA to disseminate the most recent advances on the developing and aging nervous system at the molecular and cellular levels A group of neuroscientists presented and discussed their findings at a recent IDNA conference held in Athens Greece June 15 18 1988 This meeting was sponsored by the National Hellenic Research Foundation FIDIA the Ministry of Research and

Technology the Tourism Organization of Greece and the National Institute of Child Health and Human Development NIH The Directors of the IDNA are grateful to the local committee Drs Eleni Fleischer Costas Sekeris Michael Alexis Theony Valcana and Elias Kouvelas for their efforts in organizing this meeting and for their successful integration of science and culture for the participants This volume provides a comprehensive overview of the information presented at this conference including in depth discussions of each topic by the participants The chapters are grouped into five general categories which correspond to the subject areas covered during the meeting These include Gene and Phenotypic Expression Growth Factors and Oncogenes Cytoskeletal and Extracellular Molecules Neurotransmitters and Hormones and Molecular Aspects of Aging and Alzheimer s Disease The section on Gene and Phenotypic Expression includes discussions of transient gene expression in the nervous system Herschman developmental regulation of myelin associated genes Gordon et al

Rapid Methods in Clinical Microbiology Bruce Kleger, Donald Jungkind, 2012-12-06 The papers published herein comprise the presentations given at the eighteenth of an annual series of clinical symposia arranged under the auspices of the Eastern Pennsylvania Branch of the American Society for Microbiology This symposium allowed approximately 200 persons to gather and exchange ideas on the rapid laboratory diagnosis of infectious diseases The institution of the Diagnosis Related Group DRG method for reimbursement by both government agencies and private insurance carriers has provided a financial aspect to the established clinical reasons for rapid laboratory diagnosis Now the health of the institution as well as the patient is dependent on a timely diagnosis and hopefully cure Accordingly the goal of this symposium was to present the latest developments in same day microbiology In the face of stable or diminishing resources the laboratory director is presented with many choices Do nucleic acid probes non instrumental ELISA techniques or time resolved fluorometry have a place in his or her laboratory Should the laboratory test for newly described human pathogens such as human immunodeficiency virus or human papilloma virus Can rapid techniques supplant conventional methods Or are they merely adjunctive This symposium attempted to assist in the formulation of informed decisions Bruce Kleger Donald Jungkind Eileen Rinks Linda A Miller vii ACKNOWLEDGEMENTS We would like to thank the Eastern Pennsylvania Branch of the American Society for Microbiology for sponsoring this symposium and for making this publication possible We especially thank the Symposium Committee for their diligent work in organizing an informative and successful symposium

Antioxidant Nutrients and Immune Functions Adrienne Bendich, Marshall Phillips, Robert P. Tengerdy, 2012-12-06 The determination of optimal nutritional status has traditionally been based upon generalized parameters such as weight gain and body fat levels Vitamin and mineral requirements were often related to the intakes needed to prevent overt signs of deficiency diseases such as beriberi or scurvy However in the past decade or so there have been intensive investigations to determine the subtle changes in physiological functions associated with marginal micronutrient intakes There is a growing consensus that immune system activities are very sensitive indicators of micronutrient status During this decade there has also been a rapid expansion of research in the role of free radicals and antioxidants in the major chronic diseases which afflict mankind i e cancer cardiovascular disease and autoimmune disease The main function of antioxidant nutrients in an appropriate diet is the prevention of oxidative damage to cells and their physiological functions Antioxidant nutrients counteract free radicals and damaging oxidative actions on cell membranes Since the cells of the immune system are rapidly differentiating and proliferating such dividing and transforming cells are particularly susceptible to damage by oxidation The interactions of antioxidant nutrition and immune system activities and disease resistance are therefore logical areas for research Thus the objective of this symposium was to bring together the leading investigators who have examined the immunological effects of dietary essential nutrients which share the capacity to act as antioxidants

Antioxidants in Therapy and Preventive Medicine Ingrid Emerit, Lester Packer, Christian Auclair, 2012-12-06 Twenty years ago the enzyme superoxide dismutase which uses the superoxide radical anion as its specific substrate was reported With this discovery was born a new scientific field in which oxygen necessary for aerobic life on this planet had to be considered also in terms of its toxicity and stresses This stimulated the search for knowledge of active oxygen species in biology and medicine Superoxide and other reactive oxygen species are now implicated in many disease processes Major advances have been achieved during these past years with respect to free radical generation and

mechanisms of free radical action in causing tissue injury In parallel the possibility of influencing free radical related disease processes by antioxidant treatment was studied in various in vitro and in vivo systems This was the unique theme of a conference organized in Paris by the Society for Free Radical Research December 9-10 1988 which brought together experts from basic sciences and clinicians in order to evaluate the current status of antioxidant therapy The conference emphasized fundamental processes in antioxidant action Among the major topics were superoxide dismutase SOD and low molecular weight substances with such activity called SOD mimics Other antioxidant enzymes were also considered Antioxidant vitamins in particular vitamins E and C other naturally occurring antioxidants and various synthetic antioxidants were included in the presentations as there is now a rapidly developing series of compounds with potentially interesting clinical applications
