

The background of the slide is a photograph of a desk. On the left, there is a stack of several old, thick books with worn spines. In the foreground, slightly to the right, is a black and white photograph of a landscape, possibly a field or a body of water, with a white border. The overall lighting is soft and warm, suggesting an indoor setting with natural light.

**The Coming of Materials Science** R.W. Cahn, 2001-03-16 The Coming of Materials Science both covers the discipline of materials science and draws an impressionistic map of the present state of the subject The first chapter examines the emergence of the materials science concept in both academe and industry The second and third chapters delve back into the prehistory of materials science examining the growth of such concepts as atoms crystals and thermodynamics and also examine the evolution of a number of neighbouring disciplines to see what helpful parallels might emerge The book contains numerous literature references Many refer to the earliest key papers and books while others are to sources often books offering a view of the present state of a topic Early references are to the past but as the book continues it brings the reader up to date with more recent sources The author Professor Robert Cahn FRS has striven to be critical about the history of the discipline of materials science and to draw general conclusions about scientific practice from what he has discovered about the evolution of materials science Further issues that the book highlights include What is a scientific discipline How do

disciplines merge and differentiate Can a discipline also be interdisciplinary Is materials science a real discipline A large range of themes is presented in the book and readers are invited to interact with the author if they reach alternative conclusions This book is not just for reading and reference but exists to stimulate thought and provoke discussion as well

**Thinking Physics This Way** Kapur Mal Jain, 2015-01-13 The book gives an account of the inspirations that initiated the enquiry into the physical world and its evolution as a discipline Simultaneously it motivates the reader to step ahead with a little dismay to undertake a journey in the astonishing world of physics It starts with the observation of nature and posits the questions which kept perplexing the mind of great physicists of our time In finding answers it verily explores the relationship of the observer with the object And while so doing it catapults the readers into the bizarre world of natural laws equations hypothesis and theorems The presentation reserves its difference unlike books published these days in the treatment of the subject without involving mathematics or without making tall claims of seeking wishful comparison between science and religion On the other hand it paves way to a systematic shift from traditional approach to newer and broader similarities between physical and the mental realities This effort gleans out a humane paradigm from where we see our known world in new light Therefore it asks for a limpid mind to welcome one into the world of physics This book presents physics not only as technology booster but also as life builder
