Stratigraphy Wang Naiwen, Remane, 2020-12-17 This volume presents the proceedings of Symposium I Stratigraphy of the 30th International Geological Congress at Beijing The proceedings aim to present a view of contemporary geology and should be of interest to researchers in the geological sciences **Geologic Modeling and Simulation** Daniel F.

Merriam, John C. Davis, 2012-12-06 Modeling and simulation were introduced to the earth sciences about four decades ago Modeling has proven its worth and now it is an accepted procedure for analyzing and solving geological problems The papers in this collection are focused on modeling sediment deposition and sedimentary sequences and have a decidedly practical flavor Some of the leading simulation packages such as CORRELATOR SEDFLUX SEDpak SEDSIM STRATA and STRATSIM are applied to problems in hydrocarbon exploration oil production groundwater development coal bed appraisal geothermics and environmental diagnosis All of these subjects fall under the broad heading of sedimentary basin analysis The fifteen papers in this volume are written by internationally recognized experts from academia and industry The contributions represent the status of geologic modeling and simulation at the start of the 21st century and will give the reader an insight into current research problems and their possible solutions From Depositional Systems to Sedimentary Successions on

the Norwegian Continental Margin Allard W. Martinius, R. Ravnås, J. A. Howell, R. J. Steel, J. P. Wonham, 2014-07-18 The Norwegian Continental Shelf NCS focus of this special publication is a prolific hydrocarbon region and both exploration and production activity remains high to this day with a positive production outlook A key element today and in the future is to couple technological developments to improving our understanding of specific geological situations The theme of the publication reflects the immense efforts made by all industry operators and their academic partners on the NCS to understand in detail the structural setting sedimentology and stratigraphy of the hydrocarbon bearing units and their source and seal The papers cover a wide spectrum of depositional environments ranging from alluvial fans to deepwater fans in almost every climate type from arid through humid to glacial and in a variety of tectonic settings Special attention is given to the integration of both analogue studies and process based models with the insights gained from extensive subsurface datasets **Computerized Modeling of Sedimentary Systems** Jan Harff, Wolfram Lemke, Karl Stattegger, 2013-03-14

Computerized modeling is a powerful tool to describe the complex interrelations between measured data and the dynamics of sedimentary systems Complex interaction of environmental factors with natural variations and increasing anthropogenic intervention is reflected in the sedimentary record at varying scales The understanding of these processes gives way to the reconstruction of the past and is a key to the prediction of future trends Especially in cases where observations are limited and or expensive computer simulations may substitute for the lack of data State of the art research work requires a thorough

knowledge of processes at the interfaces between atmosphere hydrosphere biosphere and lithosphere and is therefore an interdisciplinary approach

Ancient Sedimentary Environments Selley, Richard C., 2013-05-13 This edition retains the case history approach to emphasize the subsurface diagnosis of environments using seismic and geophysical well logs and their application to petroleum exploration and production This book should be of interest to undergraduates in sedimentology and petroleum geology

Advances in Geophysics, 1999-06-18 Advances in Geophysics Vol 40 systematically compares many of the currently used statistical approaches to time series analysis and modeling to evaluate each method's robustness and application to geophysical datasets This volume tackles the age old problem of how to evaluate the relative roles of deterministic versus stochastic processes signal vs noise in their observations The book introduces the fundamentals in sections titled 1 2 What is a Time Series and 1 3 How is a Time Series Quantified before diving into Spectral Analysis Semivariograms Rescaled Range Analysis and Wavelet Analysis The second half of the book applies their self affine analysis to a number of geophysical time series historical temperature records drought hazard assessment sedimentation in the context of hydrocarbon bearing strata variability of the Earth's magnetic field This volume explores in detail one of the main components of noise that of long range persistence or memory The first chapter is a broad summary of theory and techniques of long range persistence in time series the second chapter is the application of long range persistence to a variety of geophysical time series

The Scientific Ideas of G.K. Gilbert Ellis Leon Yochelson, 1980-01-01

New Perspectives in Basin Analysis Karen L. Kleinspehn, Chris Paola, 2012-12-06 In the extensive field of earth sciences with its many subdisciplines the transfer of knowledge is primarily established via personal communication during meetings by reading journal articles or by consulting books Because more information is available than can be assimilated it is necessary for the individual to search selectively Books take more time from the inception of an idea until publication than any of the other means of communication mentioned As a consequence their function is somewhat different Many good books are a compilation of up to date knowledge and serve as reference or instruction manuals Some books are a collection of previously published papers dealing with a certain topic while others may basically provide large sets of data or examples The Frontiers in Sedimentary Geology series was established both for students and practicing earth scientists who wish to either stay abreast of the most recent ideas or developments or to become familiar with an important topic in the field of sedimentary geology The series attempts to deal with subjects that are in the forefront of both scientific and economic interest The treatment of a subject in an individual volume should be a combination of topical regional and interdisciplinary approaches Although these three terms can be defined separately in reality they should flow into each other A topical treatment should relate to a major category of sedimentary geology

Clay Minerals B. Velde, 2000-04-01 This book follows another by the same author published in 1977 which the author considered as a first attempt to put some order in the house of clay petrology That book was described as an excellent first

attack on clay mineral petrology informative and stimulating because of the method of presentation and the open door treatment of the subject Not only clay mineral scientists but petrologists in general must read this first book on clay mineral petrology Earth Science Reviews This book describes clay mineral occurrence in terms of the physical and chemical forces which influence it It includes a geological description of mineral occurrence a definition of the major features of clay mineral chemical composition and an indication of the physical chemical boundaries of these occurrences It also presents general patterns for the geological environments of weathering sedimentation burial diagenesis deep sea basalt alteration hydrothermal alteration of acidic rocks and chemical precipitation in acidic and basic environments The major clay groups are related to one another as they occur in geological systems through the use of graphical analysis The author has thoroughly reviewed the relevant literature for the last 25 years The data and analyses obtained and presented in this book will not only make interesting reading but will also prove extremely useful to those involved with studies in deep sea research mining geology petroleum geology agronomy and civil engineering

Correlation in Hydrocarbon Exploration John Collinson, 2012-12-06 This book is the published record of the papers presented at a conference of the Norwegian Petroleum Society NPF held in Bergen Norway on 3-5 October 1988 The conference was initially proposed and promoted by the Geology and Geophysics Advisory Committee of the Norwegian Petroleum Society consisting of A M Spencer Chairman M Brink J D Collinson S Hanslien D M D James T B Lund K Messel E Ormaasen and G Saeland The programme and more detailed planning of the conference was carried out by a programme committee consisting of J D Collinson Chairman O Eldholm E Holter D M D James H Tykoezinski D Worsley and S M Aasheim There were 245 participants at the meeting and 36 papers were presented as talks with a further 9 presented as posters These proceedings are representative of the range of topics covered The meeting was characterized by a high level of discussion which has influenced several authors in the final preparation of their written papers These proceedings have been edited on behalf of the Norwegian Petroleum Society by J D Collinson with help from H Tykoezinski The editor and the organizing committee wish to thank all the referees who reviewed papers and all the authors who responded so fully and promptly to their comments The NPF is most grateful to the University of Bergen for making available their facilities for the conference

Deciphering Earth's History: the Practice of Stratigraphy Angela Coe, 2022-11-08 Stratigraphy allows us to establish and communicate the timings for the course of Earth history and provides the means to determine the duration and rates of Earth processes Deciphering Earth's History the Practice of Stratigraphy focuses on how to apply the wide spectrum of stratigraphical techniques It also explains how these techniques can be integrated and details their individual strengths and limitations Chapters are laid out in a step by step style guiding the reader through a recommended approach and explaining the factors to be considered The methods are illustrated with flow charts marginal top tips checklists worked examples and over 200 figures Authors from academia research centres and industry have contributed to ensure a wide range of perspectives are included In addition to chapters

on each of the stratigraphical techniques there is also material on accounting for stratigraphical incompleteness constructing geological timescales handling and archiving stratigraphical data and the application of stratigraphy to space exploration and other disciplines This book is designed for a wide audience ranging from advanced level undergraduates to professional practitioners wishing to use other stratigraphical techniques or understand the advantages and weaknesses of particular techniques **Sedimentary dynamics of continental shelves** ,1981-01-01 Sedimentary dynamics of continental shelves
