Maple and Mathematica Inna K. Shingareva, Carlos Lizárraga-Celaya, 2010-04-29 In the history of mathematics there are many situations in which calculations were performed incorrectly for important practical applications Let us look at some examples the history of computing the number began in Egypt and Babylon about 2000 years BC since then many mathematicians have calculated e g Archimedes Ptolemy Vi ete etc The first formula for computing decimal digits of π was discovered by J Machin in 1706 who was the first to correctly compute 100 digits of π Then many people used his method e g W Shanks calculated with 707 digits within 15 years although due to mistakes only the first 527 were correct For the next examples we can mention the history of computing the ne structure constant that was first discovered by A Sommerfeld and the mathematical tables exact lutions and formulas published in many mathematical textbooks were not verified rigorously 25 These errors could have a large effect on results obtained by engineers But sometimes the solution of such problems required such technology that was not available at that time In modern mathematics there exist computers that can perform various mathematical operations for which humans are incapable Therefore the computers can be used to verify the results obtained by humans to discovery new results to provetheresultsthatahumancanobtainwithoutanytechnology With respect to our example of computing we can mention that recently in 2002 Y Kanada Y Ushiro H Kuroda and M

Differential Geometry and Its Applications John Oprea, 2024-07-01 Differential Geometry and Its Applications studies the differential geometry of surfaces with the goal of helping students make the transition from the compartmentalized courses in a standard university curriculum to a type of mathematics that is a unified whole It mixes geometry calculus linear algebra differential equations complex variables the calculus of variations and notions from the sciences That mix of ideas offers students the opportunity to visualize concepts through the use of computer algebra systems such as Maple Differential Geometry and Its Applications emphasizes that this visualization goes hand in hand with understanding the mathematics behind the computer construction The book is rich in results and exercises that form a continuous spectrum from those that depend on calculation to proofs that are quite abstract
