

and requires an air-conditioning system with value of \$125,000 or less; and when a 15-ton-per-system or less is designed for a singular space of a building and each 15-ton system or less has an independent duct system. Systems not complying with the above require design documents that are to be sealed by an Engineer.

Example 1: When a space has two 10-ton systems with each having an independent duct system, the contractor may design these two systems since each system is less than 15 tons.

Example 2: Consider a small single-story office building, which consists of 6 individual offices where each office has a single three-ton package air conditioning heat pump. The six heat pumps are connected to a single water cooling tower. The cost of the entire heating, ventilation and air conditioning work is \$47,000 and the office building accommodates fewer than 100 persons. Because the six mechanical units are connected to a common water tower this is considered to be an 18-ton system. It therefore could not be designed by a
