Robert Lazzarini:

Robert Lazzarini Robert Lazzarini, John B. Ravenal, 2003 Already familiar to viewers of the 2002 Whitney Museum Biennial Robert Lazzarini is an American sculptor whose work combines extreme realism with extreme distortion Combining advanced digital technology with traditional sculpting methods Lazzarini recreates familiar objects to scale out of their original materials while deforming them in seemingly impossible ways Appearing to expand and contract as viewers shift vantage points the works seem to collapse upon themselves or in the artist's words slip toward their own demise His beautiful yet unsettling works address the physical psychological and emotional implications of this distortion This first publication devoted to Lazzarini's work coincides with his first solo museum exhibition organized by the Virginia Museum of Fine Arts and scheduled to open in November 2003 The book surveys his major work from 1997 to the present including his two most widely recognized pieces the installation of four skewed skulls in BitStreams 2001 at New York's Whitney Museum of American Art and the warped payphone from the 2002 Whitney Biennial Designed by the artist Robert Lazzarini is envisioned as an exhibition in book format including spreads that create unique visual spaces in which to present the work With an essay by John B. Ravenal describing Lazzarini's creative process and how his objects relate to the histories of perception and distortion in art this publication will fascinate all who appreciate and study contemporary art

Reimagining the City Linda Matthews, 2022-06-24 Design Strategies for Reimagining the City is situated between projective geometry optical science and architectural design It draws together seemingly unrelated fields in a series of new digital design tools and techniques underpinned by tested prototypes The book reveals how the relationship between architectural design and the ubiquitous urban camera can be used to question established structures of control and ownership inherent within the visual model of the Western canon Using key moments from the broad trajectory of historical and contemporary representational mechanisms and techniques it describes the image's impact on city form from the inception of linear perspective geometry to the digital turn The discussion draws upon combined fields of digital geometry the pictorial adaptation of human optical cues of colour brightness and shape and modern image capture technology webcams mobile phones and UAVs to demonstrate how the permeation of contemporary urban space by digital networks calls for new architectural design tools and techniques A series of speculative drawings and architectural interventions that apply the new design tools and techniques complete the book Aimed at researchers academics and upper level students in digital design and theory it makes a timely contribution to the ongoing and broadly debated relationship between representation and architecture *Digital Baroque* Timothy Murray, In this intellectually groundbreaking work Timothy Murray investigates a paradox embodied in the book's title What is the relationship between digital in the form of new media art and baroque a highly developed early modern philosophy of art Making an exquisite and unexpected connection between the old and the new Digital Baroque analyzes the philosophical paradigms that inform contemporary screen arts Examining a wide range of art forms Murray reflects on the rhetorical emotive and social forces inherent in the screen arts dialog with early modern concepts Among the works discussed are digitally oriented films by Peter Greenaway Jean Luc Godard and Chris Marker video installations by Thierry Kuntzel Keith Piper and Renate Ferro and interactive media works by Toni Dove David Rokeby and Jill Scott Sophisticated readings reveal the electronic psychosocial webs and digital representations that link text film and computer Murray puts forth an innovative Deleuzian psychophilosophical approach one that argues that

understanding new media art requires a fundamental conceptual shift from linear visual projection to nonlinear temporal fields intrinsic to the digital form

Geosonics Joshua Dittrich, 2024-08-08 How do we listen to the earth That is the central question posed in Geosonics Listening Through Earth's Soundscapes Working across sound studies media theory and environmental media studies Joshua Dittrich explores the material and metaphorical geology of the sonic environment In an epoch of climate crisis environment is no longer a neutral background site or simple surrounding environment is immanently implicated in the chains of mediation that make up the material and imaginative infrastructure of our lives The analytical task of Geosonics is to tune into that infrastructure through sound Drawing on influential work in sound studies around the concept of transduction this book explores how listening does not take place in a pre-existing soundscape but rather makes place by etching out a mediated mutually constitutive set of relations between listeners media and environments
