methods most notably LR The LR parsing algorithm first precompiles a grammar into an LR parsing table and at the actual parsing time it performs shift reduce parsing guided deterministically by the parsing table So the key to the LR efficiency is the grammar precompilation something that had never been tried for natural languages in 1985 Of course there was a good reason why LR had never been applied for natural languages it was simply impossible If your context free grammar is sufficiently more complex than programming languages its LR parsing table will have multiple actions and deterministic parsing will be no longer possible *The New Goals in Spelling* May B. Lambader, William Kottmeyer, 1955 *Macmillan Dictionary for Children* Robert B. Costello, 2001 Provides valuable information on usage in the English language and helps build vocabulary
