Seismology Of The Sun And The Distant Stars:

Seismology of the Sun and the Distant Stars D.O. Gough, 2012-12-06 The history of modern helioseismology is only ten years old In 1975 F L Deubner separated for the first time the spatial and temporal properties of the solar five minute oscillations and was thus able to measure the dispersion relation for high degree acoustic modes p modes The diagnostic value of these observations was appreciated immediately Indeed by comparing the observed relation with computations that had already been carried out by R K Ulrich and subsequently by H Ando and Y Osaki it was recognised that contemporary solar models that had been constructed with the low observed neutrino flux in mind were too hot in their outer layers Moreover their convection zones were too shallow Since that time the observations have improved There is now good reason to suppose that a sufficiently careful analysis will lead to a direct determination of the helium abundance in the solar convection zone especially when foreseeable further improvements in the observations have been achieved The data will also provide useful diagnostics of the uncertain equation of state of partially ionized plasmas and they might also enable us to measure the large scale structure of the convective flow Seismology of the Sun and the Distant Stars D O

Hefele, Inge Heinrich, W. Hofmann, D. Krahn, V. R. Matas, Dr. Lutz D. Schmädel, G. Zech, 2013-04-17 **Energy Research Abstracts**, 1986 Solar Neutrinos Raymond Davis, Jr., 2018-05-11 A variety of evolutionary sequences of models for the solar interior has been computed corresponding to variations in input data to obtain some idea of the uncertainties involved in predicting a solar neutrino flux It is concluded that the neutrino flux can be estimated to within a factor of 2 the primary uncertainty being the initial homogeneous solar composition detailed results are given With a preferred value of the heavy element to hydrogen ratio $Z/X = 0.028$ the helium content necessary to fit a model to the observed solar luminosity is found to be $Y = 0.27$ **Solar Interior and Atmosphere** Arthur N.

Cox, 2018-01-30 Observational data derived from the world's largest solar telescopes are correlated with theoretical discussions in nuclear and atomic physics by contributors representing a wide range of interests in solar research *The Sun in Time* Charles Philip Sonett, Mark S. Giampapa, Mildred Shapley Matthews, 1991 An interdisciplinary approach to solar physics as eighty nine contributors trace the evolution of the Sun and provide a review of our current understanding of both its structure and its role in the origin and evolution of the solar system **The Sun** Michael Stix, 2012-12-06 A wealth of new experimental and theoretical results has been obtained in solar physics since the first edition of this textbook appeared in 1989 Thus all nine chapters have been thoroughly revised and about 100 pages and many new illustrations have been added to the text The additions include element diffusion in the solar interior the recent neutrino experiments methods of image restoration observational devices used for spectroscopy and polarimetry and new developments in helioseismology and numerical simulation The book takes particular advantage of the results of several recent space missions which lead to

substantial progress in our understanding of the Sun from the deep interior to the corona and solar wind *The Equation of State in Astrophysics* G. CHABRIER (Ed), Evry L. Schatzman, 1994-08-11 A unique review of our understanding of dense ionised matter in astrophysical contexts essential reading for graduate students and researchers *Advances in Helio- and Asteroseismology* Jørgen Christensen-Dalsgaard, Søren Frandsen, 2012-12-06 Helio and asteroseismology study the interior of the Sun and other stars by means of observations of oscillations on their surfaces The last 10 years in the study of the solar interior to a has witnessed a very rapid evolution point where we can now contemplate investigating the physical state of matter or the details of rotation and other large scale motion in the Sun The stellar studies are in some respects at the point of the solar studies 10 years ago but appear poised to take off Thus the time was deemed ripe for IAO Symposium No 123 to assess the present status of this work and plan for its future development Apart from the seismic data few observations are available to provide information about stellar interiors Detailed studies by spectral analysis can be made of stellar surface properties including atmospheric temperature and chemical composition However the stellar radiative spectrum is almost entirely fixed by the mass luminosity radius and surface rotation of the star and contains essentially no other information about the interior An important test of stellar evolution theory is provided by observations of stellar clusters whose members can reasonably be assumed to have the same age and chemical composition The location of such stars in a HR diagram where luminosity is plotted against the effective temperature can roughly be understood in terms of stellar evolution calculations

The Internal Solar Angular Velocity B.R. Durney, Sofia Sabatino, 2012-12-06 It is clear that the discovery of solar eigenmodes and the resulting possibility of probing the solar interior is an event of primary importance for solar physics in general and for theories of the inner solar angular velocity in particular While these theories are basic for the understanding of the solar spin down differential rotation dynamo and activity they are however extremely complex and in all likelihood only limited further progress could have been achieved without the guidance of observations Until recently and in spite of the scant observational basis the theoretical work has moved forward as the perusal of this book shows There cannot be any doubt however that the present rapidly expanding worldwide observational program will lead ultimately to a vigorous theoretical development of the field It appeared to the organizers that a meeting centered on theories of the inner solar angular velocity comprising presentations of the main research areas by the involved scientists would significantly foster this development since it would help to clarify the basic ideas of the subject The meeting held at the National Solar Observatory Sacramento Peak from August 11 to August 14 was the eighth in a series of summer symposia at Sacramento Peak The unqualified success of the meeting could not have been possible without the unlimited devotion of the staff at Sacramento Peak Ray Smartt Frank and Pat Hegwer Ramona Elrod in particular
