Selbourne Year The Naturalists Journal For 1784:

A Selborne Year Gilbert White, 1986 *The Selborne Pioneer* Ted Dadswell, 2017-03-02 Gilbert White's name is known universally but as Ted Dadswell insists in this book important aspects of his work have frequently been overlooked even by scholarly editors. The Selborne naturalist 1720-1793 has been described as a prince of personal observers but a shrewd analytical questioning and comparing was also typical of his natural knowledge. Exceptional even in his general aims White studied the behaviour, the manners and conversation of his animals and plants. He saw moreover that an animal or plant and indeed a parish such as his own was unitary in operation again and again a cause had numerous effects and an effect numerous causes. Observation could go forward in circumstances such as these if one was both sharp-eyed and patient but how could true investigation be managed? How could a particular cause or effect be isolated or tested? Here what Dadswell calls White's comparative habit was put to good use. Gilbert White was a careful keeper of records and using these comparatively he appealed to controls while examining his living creatures. Questioning and testing even the entirely usual White was brought back repeatedly to the notion of adaptability. His zoological findings often concerned changed or changing animals or birds and their social and inter-personal relationships. Today we can seem particularly well placed to appreciate his methods and factual claims: our ethologists and ecologists have seemingly corroborated much of what he did. And yet just this corroboration renders him the more mysterious. To properly assess White as naturalist we must be able to approach him not only scientifically but also historically. He hoped for the emergence of teams of behavioural workers but did not try to preempt what would be achieved only by such teams and while he saw with his own eyes as his friend John Mulso says he was substantially affected by certain of his contemporaries and predecessors. His journals and notebooks show us the naturalist at work. When a perhaps unexpected combination of influences is allowed for his unique activities can be at least partially explained.

Connection Katrin Kleemann, 2023-06-06 In the summer of 1783 an unusual dry fog descended upon large parts of the northern hemisphere. The fog brought with it bloodred sunsets, a foul sulfuric odor and a host of other peculiar weather events. Inspired by the Enlightenment many naturalists attempted to find reasonable explanations for these occurrences. Between 8 June 1783 and 7 February 1784 a 27 kilometer long fissure volcano erupted in the Icelandic highlands. It produced the largest volume of lava released by any volcanic eruption on planet Earth in the last millennium. In Iceland the eruption led to the death of one fifth of the population. The jetstream carried its volcanic gases further afield to Europe and beyond where they settled as a fog the origin of which puzzled naturalists and laypersons. *A Mist Connection* is an environmental history that documents the Laki eruption and its consequences for Iceland and the wider world. The book combines methods of
