Long-term Effects of Sewage Sludge and Farm Slurries Applications J.H. Williams,G. Guidi,P. L'Hermite,1985-10-31 Anaerobic digestion has no effect on the quantity of the waste treated but it affects its quality and its usefulness as fertilizer This conference proceedings collection of twenty papers delves into the issue **Long-term Effects of Sewage Sludge and Farm Slurries Applications** J.H. Williams,G. Guidi,P. L'Hermite,1985-10-31 Anaerobic digestion has no effect on the quantity of the waste treated but it affects its quality and its usefulness as fertilizer This conference proceedings collection of twenty papers delves into the issue **Selected Water Resources Abstracts** ,1991 **Long-term Effects of Sewage Sludge and Farm Slurries Applications** ,1985 Processing and Use of Organic Sludge and Liquid Agricultural Wastes P. L'Hermite,2013-06-29 Disposal of organic sludge and liquid agricultural wastes is a universal problem Their production cannot be halted and as steps are taken to maintain or improve the quality of rivers and lakes it grows in quantity The Commission's early awareness of the need for action to prepare for substantial growth in the Community's sludge disposal problem led to the setting up of the COST 68 project to coordinate and guide European research and development work with particular emphasis on recycling sludge to agricultural land Two years ago the field of research activities was extended to liquid agricultural wastes This Symposium is the latest opportunity to provide a comprehensive review of the results of the project to define current trends in practice and to establish by discussion the priorities for research over the next few years The development of instrumentation and of analytical techniques during the period has extended our knowledge of the organic and inorganic constituents of sewage sludge and agricultural wastes and enabled us more readily to identify and measure the risks to which our general environment may be exposed when disposing of it This evolution of understanding is a continuing process and an essential guide to the modification of disposal practices to achieve safer and more efficient operations However it is important to take a broad view of the application of research findings in the light of the considerable contrast in conditions in different parts of the world **Soil Amendments and Environmental Quality** Jack E. Rechcigl,1995-09-25 This book presents a comprehensive and balanced overview of soil amendments and their effect on the environment It encompasses both positive and negative aspects of chemical fertilizers that supply nitrogen phosphorous sulfur lime micronutrients and trace metals Pros and cons are discussed with respect to the optimal and the most environmentally sound use of soil amendments and guidance is provided on how to minimize the environmental effects of amendments Natural fertilizers including manure sludge fly ash phosphogypsum and byproduct gypsum are also discussed Alternative agronomic practices and biotechnology that ameliorate or minimize potential adverse effects of fertilizer use are examined in detail This authoritative and up to date treatise is multidisciplinary in nature and international in scope a powerful reference tool for researchers a thorough guide for practitioners and policy makers and an excellent text book for academic courses Physical Methods in Agriculture Jirí Blahovec,Miroslav Kutílek,2012-12-06 The first attempts to use

physical methods in agriculture can be found in nineteenth century as a necessary component of farm and food machinery. There were mechanics, electricity and physical chemistry that were the first physical disciplines used in agriculture and food industry. In the same time period the studies on physical properties of soils started to be one of main topics of soil science. The twentieth century was a century of research on physical properties of agromaterials. The physical properties of agromaterials have been studied e.g. in the USA where a big role has been played by ASAE 1907 and in the Soviet Union where the special Institute of Agrophysics was founded 1932 by Academician Ioffe. The ASAE's activity was enlarged in 1960s and 1970s especially with the role playing by the Mohsenin's group and its followers. At that time the Institute of Agrophysics of Polish Academy of Sciences was founded in Lublin and conferences on physical methods in agriculture began to be organised. The participants of the last conference Physical Methods in Agriculture Approach to Precision and Quality held on August 27-30 2001 have prepared the basis for this book. Part of the conference participants decided to enlarge their conference papers to be more general and more instructive in relation to further development of the science. New papers prepared under this decision were reviewed, discussed and revised repeatedly to be presented in this book.

Handbook of Soil Conditioners

Wallace, 2020-10-28. This work features scientific, technical and practical information on mineral, organic and synthetic conditioners as well as their beneficial effects on the soil's physical properties that promote optimal plant growth, maximize soil fertility and enhance biomediation processes. It promotes the synergistic use of various agricultural technologies to manage global concerns of decreasing arable land.

Animal Manure on Grassland and Fodder Crops. Fertilizer or Waste?

H.G. van der Meer, R.J. Unwin, T.A. van Dijk, G.C. Ennik, 2012-12-06. On the occasion of its twenty-fifth anniversary in 1985 the Netherlands Society for Grassland and Fodder Crops NVWV agreed to organize an International Symposium on a topic related to intensive grass and fodder production systems. The theme selected was Animal manure on grassland and fodder crops. Fertilizer or waste. This Symposium was organized under the auspices of the European Grassland Federation and held at the International Agricultural Centre in Wageningen from 31 August to 3 September 1987. The problems connected with the disposal of animal waste have received much attention in recent years, especially in regions with intensive animal husbandry. Whereas the production of agricultural land increased strongly, the need for it decreased because of the introduction of cheap inorganic fertilizers which are easier to handle and have a more reliable effect on crop growth. As a consequence many farmers dispose of animal manure as cheaply as possible whilst avoiding damage to grassland and crops and paying little attention to effective use of the plants' nutrients contained in the manure. Present practices of manure handling and application often lead to environmental problems. The rise in awareness of these problems renewed interest in possibilities to improve the utilization of nutrients from animal manure in crop production. Research on this topic has been stimulated in many countries during the last decade and the aim of this Symposium was to review and assess present-day knowledge.

Piccolo,1996-06-07 This book highlights the increasing importance of humic substances in the different scientific fields related to terrestrial ecology soil quality conservation and environmental chemistry It shows that modern humic substances research is not only directed to unravel their yet ill defined chemical structure but is successfully exploring the interconnected chemical biological and physical processes that maintain the ecological equilibrium of soil and ensure a sustainable agricultural production The book will primarily be of interest to soil scientists and to ecological and environmental scientists People in the fields of forest science agronomy analytical and environmental chemistry water science environmental engineering and coal science will also find this publication worthy of their attention

The Science of Composting Marco de Bertoldi,2013-11-11 The European Union initially demonstrated its interest in waste in the late 70s with the programme on Waste Recycling Research and Development At that time composting was only present as a coordination activity and it was only later that specific research programmes in the area were within Europe which was largely instrumental in setting up a series of European conferences seminars and work shops Some of these have resulted in publications which have made significant contributions to developments in the understanding of composting and the use of composts In particular the outputs from meetings in Oxford 1984 Udine 1986 Neresheim 1988 and Angers 1991 are worthy of note Composting has seen significant changes since the 70s when the major thrust in Europe was using mixed municipal solid waste as a feed material Many composting plants which were built to use this material were closed due to the poor quality of the compost which made it very difficult to market As a result the main areas of interest as far as the municipalities are concerned are now with biowaste and source separated organics This interest is apparent from the many new plants which are being constructed across Europe and the ready market which exists for the products In parallel with the renewed interest of the municipalities other areas such as agriculture and the wastewater treatment industries are also developing their own schemes
