Loose Ends Russell Reising, 1996 In this study of American cultural production from the colonial era to the present Russell Reising takes up the loose ends of popular American narratives to craft a new theory of narrative closure In the range of works examined here from Phillis Wheatley's poetry to Herman Melville's *Israel Potter* from Henry James's *The Jolly Corner* to the Disney Studio's *Dumbo* Reising finds endings that violate all existing theories of closure and narratives that expose the often unarticulated issues that inspired these texts Reising suggests that these non endings entirely refocus the narrative structures they appear to conclude accentuate the narrative stresses and ideological fissures that the texts seem to suppress and reveal shadow narratives that trail alongside the dominant story line He argues that unless the reader notices the ruptures in the closing moments of these works the social and historical moments in which the narrative and the reader are embedded will be missed This reading not only offers new interpretive possibilities but also uncovers startling affinities between the poetry of Phillis Wheatley and the fiction of Henry James between Charles Brockden Brown's *Wieland* and Melville's least studied novel and between Emily Dickinson's poem *I Started Early Took My Dog* and Disney's animated classic *Pursuing* the implications of these failed moments of closure Reising elaborates on topics ranging from the roots of domestic violence and mass murder in early American religious texts to the pornographic imperative of mid century nature writing and from James's descent into naturalist and feminist fiction to *Dumbo*'s explosive projection of commercial racial and political agendas for postwar U S culture

The Discipline of Subjectivity Ermanno Bencivenga, 2014-07-14 Through an interpretation of Montaigne s philosophical vision as expressed in his Essays Ermanno Bencivenga contributes to the current debate about the death of the subject by developing a view of the self as a project of continuous construction rather than the source and foundation of knowledge This latter Cartesian conception of self consciousness as a logical and epistemological starting point is Bencivenga contends delusive the certainty it provides is more akin to faith than to a cognitive state How then do we acquire knowledge of the self Montaigne makes for a productive case study in this regard he declares that he himself is the matter of his book and that nothing but the

constitution of his own self is his business A study of Montaigne reveals that the fundamental category missing in the Cartesian conception of the self is that of practical effort The self is not a ready made entity available for inspection and analysis but something whose generation requires exercise training and discipline It is the result of an operation that must be performed not just once but as in all training over and over again until it becomes second nature Bencivenga characterizes the particular training required by the project of constituting a subject as a revolutionary transgressive critical one which shares with philosophical activity a profoundly playful irrelevance to the ready to hand Originally published in 1990 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Some Novel Types of Fractal Geometry Stephen Semmes,2001 The present book deals with fractal geometries which have features similar to ones of ordinary Euclidean spaces while at the same time being quite different from Euclidean spaces in other ways A basic type of feature being considered is the presence of Sobolev or Poincaré inequalities concerning the relationship between the average behaviour of a function and the average behaviour of its small scale oscillations Remarkable results in the last few years of Bourdon Pajot and Laakso have shown that there is much more in the way of geometries like this than has been realized Examples related to nilpotent Lie groups and Carnot metrics were known previously On the other hand typical fractals that might be seen in pictures do not have these same kinds of features *Some Novel Types of Fractal Geometry* will be of interest to graduate students and researchers in mathematics working in various aspects of geometry and analysis
