Quality, Evidence, & Effectiveness in Health Promotion ,1998 **Using Research for Effective Health Promotion**

Sandy Oliver, Greet Peersman, 2001-08-16 Well before evidence based practice became fashionable beyond clinical medicine the team at SSRU was telling us what we ought to already know that some interventions work better than others and that that some well meaning attempts at health promotion just like medicine and surgery may do harm This book is a must for policy makers and practitioners who want to make a real difference and understand how research evidence can inform their practice The book will also be an important tool for researchers who will increasingly be using the tools of systematic review if they want to inform and influence those who deliver services Helen Roberts Professor of Child Health City University This book bridges the gap between research and practice in health promotion It advances evidence based health promotion by illustrating how service providers and researchers can change their working practices to benefit the public It addresses the need for health promotion services to be grounded in empirical research and for research to focus on issues important to those delivering as well as those receiving the services Using Research for Effective Health Promotion advances the debate about the relative values of qualitative and experimental research in health promotion and encourages an increased participation of service users in the development and evaluation of services It provides health promotion specialists with time saving tools to draw upon research quickly and critically and is an important resource for students and professionals in fields such as public health nursing education social work and voluntary services **Health Promotion** Keith Tones, Jackie

Green, 2004-05-24 Written for all professionals who strive to improve the health of others **Evaluating Health Promotion**

complex and powerful computer generated statistical models has greatly eroded the former prominence of social theory in data analysis replacing it with an emphasis on statistical technique To correct this trend Carol S Aneshensel presents a method for bringing data analysis and statistical technique into line with theory She approaches this task by first providing an overview that explains the connection between data analysis statistical technique and theory This section includes a description of the elaboration model for analyzing the empirical association between two variables by adding a third variable to the analysis Aneshensel then introduces a new concept into this model the focal relationship This concept is the one cause and effect type of relationship of primary significance that is indispensable to the entire theory Building upon the focal

relationship as the cornerstone for all subsequent analysis two analytic strategies are developed to establish its internal validity An exclusionary strategy to eliminate alternative explanations for the focal relationship using control and other independent variables to rule out spuriousness and redundancy
