Stock Assessment Vincent F. Gallucci,Saul B. Saila,Daniel J. Gustafson,Brian J. Rothschild,2023-05-31 *Stock Assessment*
Quantitative Methods and Applications for Small Scale Fisheries is a book about stock assessment as it is practiced It focuses
 on applications for small scale or artisanal fisheries in developing countries however it is not limited in applicability to
 tropical waters and should also be considered a resource for students of temperate fishery management problems It
 incorporates a careful sample design various mathematical models as a basis for predicting consequences for stock
 exploitation and discusses the impact of exploitation on non targeted species This was a unique concept involving a
 collaborative effort between U S and host country scientists to address issues of regional and global concern through
 innovative research Unlike other books on stock assessment that show mathematical models this is the only book of its kind
 that discusses how an assessment is carried out It looks at the field as a whole and includes sampling age determination and
 acoustics The book represents the culmination of a nine year program financed by the United States Agency for International
 Development to provide new or improved methods of stock assessment for artisanal fisheries *Stock Assessment* ,1996

Investigation of Uncertainty in Stock Assessment and Prediction Alexey Russkikh,2012-06 Currently under intense

fishing is important to keep the population of commercial fish within safe biological limits To check the status of the stock dynamics scientists estimate its size Assessment of fish stocks is an essential tool in the study of marine ecosystems However the observations always contain errors and uncertainty in the measurements The book is an attempt to investigate part of the uncertainty in stock assessment and prediction of target species The research results can be used as additional information for the main stock assessment This uncertainty analysis using bootstrap is only the first step in the construction of full analysis of uncertainty in stock assessment Additional work to more fully characterize all important sources of uncertainty in the assessment process including modeling errors should be used to estimate the applicability of the current biological reference points as well as any harvest control rules
