Carlson, 2017-06-26 *Quantitative Methods in Archaeology Using R* is the first hands-on guide to using the R statistical computing system written specifically for archaeologists. It shows how to use the system to analyze many types of archaeological data. Part I includes tutorials on R with applications to real archaeological data showing how to compute descriptive statistics, create tables, and produce a wide variety of charts and graphs. Part II addresses the major multivariate approaches used by archaeologists, including multiple regression and the generalized linear model, multiple analysis of variance, and discriminant analysis, principal components analysis, correspondence analysis, distances, and scaling, and cluster analysis. Part III covers specialized topics in archaeology, including intra-site spatial analysis, seriation, and assemblage diversity. **A Quantitative Method for Deriving Cultural Chronology** James Alfred Ford, 1972 **Method and Theory in Historical Archaeology** Stanley South, 2002-12-31 Described by Lewis Binford in his new foreword as a solid foundation on which to build a vital and growing historical archaeology, Stanley South's famous book on historical archaeology includes a new introduction by the author that discusses how the book came to be written and the evolution of the field. Widely regarded as one of the most influential books in historical archaeology, the book was originally published by Academic Press in 1977. **Retrieving the Past** Joe D. Seger, 1996 *Practices of Archaeological Stratigraphy* Edward C. Harris, 2014-06-28 *Practices of Archaeological Stratigraphy* brings together a number of examples which illustrate the development and use of the Harris Matrix in describing and interpreting archaeological sites. This matrix, the theory of which is described in two editions of the previous book by Harris, *Principles of Archaeological Stratigraphy*, made possible for the first time a simple diagrammatic representation of the stratigraphic sequence of a site, no matter how complex. The Harris Matrix, by showing in one diagram all three linear dimensions plus time, represents a quantum leap over the older methods which relied on sample sections only. In this book, 17 essays present a sample of new work demonstrating the strengths and uses of the Harris Matrix, the first ever published collection of papers devoted solely to stratigraphy in archaeology. The

crucial relationships between the Harris methods open area excavation techniques the interpretation of interfaces and the use of single context plans and recording sheets is clarified by reference to specific sites These sites range from medieval Europe through Mayan civilizations to Colonial Williamsburg Virginia This book will be of great value to all those involved in excavating and recording archaeological sites and should help to ensure that the maximum amount of stratigraphic information can be gathered from future investigations Presents case studies which illuminate the Harris matrix method invented by Edward C Harris Senior editor is the inventor of this method and principle in the field Serves as a companion volume to Harris s Principles of Archaeological Stratigraphy **Archaeological Research** Peter Peregrine, 2016-12 This updated edition of Archaeological Research introduces the basic methods of archaeological research including data collection analysis interpretation as well as a consideration of the state of archaeology today New to the Second Edition is updated information on geographic information systems and remote sensing strategies and a greatly expanded discussion of practices in cultural resource management archaeology This popular concise textbook explores various research methods analytical techniques legal and ethical issues facing archaeologists includes discussions of the archaeological process and record sampling and research design survey and excavation methods and strategies recordkeeping analysis archaeological dating presenting results and research opportunities is an excellent text for undergraduate students in basic archaeology courses field methods courses and field schools **Studia Meroitica 1984** Sergio Donadoni, Steffen Wenig, 1989-12-31 No detailed description available for Studia Meroitica 1984 **Lithic Technological Systems and Evolutionary Theory** Nathan Goodale, William Andrefsky, Jr, 2015-01-22 Stone tool analysis relies on a strong background in analytical and methodological techniques However lithic technological analysis has not been well integrated with a theoretically informed approach to understanding how humans procured made and used stone tools Evolutionary theory has great potential to fill this gap This collection of essays brings together several different evolutionary perspectives to demonstrate how lithic technological systems are a by product of human behavior The essays cover a range of topics including human behavioral ecology cultural transmission phylogenetic analysis risk management macroevolution dual inheritance theory cladistics central place foraging costly signaling selection drift and various applications of evolutionary ecology **The Rise and Fall of Culture History** R. Lee Lyman, Michael J. O'Brien, Robert C. Dunnell, 2007-07-27 This volume presents an insightful critical analysis of the culture history approach to Americanist anthropology Reasons for the acceptance and incorporation of important concepts as well as the paradigm s strengths and weaknesses are discussed in detail The framework for this analysis is founded on the contrast between two metaphysics used by evolutionary biologists in discussing their own discipline materialistic populational thinking and essentialistic typological thinking Employing this framework the authors show not only why the culture history paradigm lost favor in the 1960s but also which of its aspects need to be retained if archaeology is ever to produce a viable theory of culture change *Measuring the Flow of Time* James A. Ford, 1999 This collection of Ford s works focuses on the

development of ceramic chronology a key tool in Americanist archaeology **Seriation, Stratigraphy, and Index Fossils** Michael J. O'Brien, R. Lee Lyman, 2007-05-08 It is difficult for today's students of archaeology to imagine an era when chronometric dating methods were unavailable. However, even a casual perusal of the large body of literature that arose during the first half of the twentieth century reveals a battery of clever methods used to determine the relative ages of archaeological phenomena, often with considerable precision. Stratigraphic excavation is perhaps the best known of the various relative dating methods used by prehistorians. Although there are several techniques of using artifacts from superposed strata to measure time, these are rarely if ever differentiated. Rather, common practice is to categorize them under the heading stratigraphic excavation. This text distinguishes among the several techniques and argues that stratigraphic excavation tends to result in discontinuous measures of time, a point little appreciated by modern archaeologists. Although not as well known as stratigraphic excavation, two other methods of relative dating have figured important in Americanist archaeology: seriation and the use of index fossils. The latter, like stratigraphic excavation, measures time discontinuously, while the former, in various guises, measures time continuously. Perhaps no other method used in archaeology is as misunderstood as seriation, and the authors provide detailed descriptions and examples of each of its three different techniques. Each method and technique of relative dating is placed in historical perspective, with particular focus on developments in North America, an approach that allows a more complete understanding of the methods described, both in terms of analytical technique and disciplinary history. This text will appeal to all archaeologists, from graduate students to seasoned professionals who want to learn more about the backbone of archaeological dating. Seriation in Combinatorial and Statistical Data Analysis Israël César Lerman, Henri Leredde, 2022-03-04 This monograph offers an original, broad, and very diverse exploration of the seriation domain in data analysis, together with building a specific relation to clustering. Relative to a data table crossing a set of objects and a set of descriptive attributes, the search for orders which correspond respectively to these two sets is formalized mathematically and statistically. State-of-the-art methods are created and compared with classical methods, and a thorough understanding of the mutual relationships between these methods is clearly expressed. The authors distinguish two families of methods: Geometric representation methods, Algorithmic and Combinatorial methods. Original and accurate methods are provided in the framework for both families. Their basis and comparison is made on both theoretical and experimental levels. The experimental analysis is very varied and very comprehensive. Seriation in Combinatorial and Statistical Data Analysis has a unique character in the literature, falling within the fields of Data Analysis, Data Mining, and Knowledge Discovery. It will be a valuable resource for students and researchers in the latter fields.

Debating Archaeology Lewis R. Binford, 2016-09-16 In this volume, the founder of processual archaeology, Lewis R. Binford, collects and comments on the twenty-eight substantive papers published in the 1980s, the third in his set of collected papers also including *Working at Archaeology* and *An Archaeological Perspective*. This ongoing collection of self-edited papers, together

with the extensive and very candid interstitial commentaries provides an invaluable record of the development of The New Archaeology and a challenging view into the mind of the man who is certainly the most creative archaeological theorist of our time A new 2009 foreword allows further reflections on his work *The Prehistoric Sinagua* Warren R. DeBoer,1980

Mathematics and Computers in Archaeology J. E. Doran,F. R. Hodson,1975 This book is for students and practitioners of archaeology It offers an introductory survey of all the applications of mathematical and statistical techniques to their work These applications are increasingly concerned with computerized data classification and quantification and their effect is to reduce the level of uncertainty in the interpretation of the evidence that time and chance have left Any archaeologist wanting to find out what these new methods have to offer has hitherto been forced to search for information in the specialist handbooks conference proceedings and review articles of his own and very often of other disciplines This book brings the information conveniently together so far as it pertains to archaeology and permits an assessment of its relevance and quality Those who have been daunted by the specialist knowledge apparently demanded will now be able to acquire a thorough grasp of principles and practices Only an elementary knowledge of mathematics is presumed throughout Part 1 provides a brief introduction to basic concepts in archaeology and mathematics Part 2 relates the standard archaeological techniques and procedures to mathematics it concentrates on numerical approaches best suited to archaeological practices Part 3 examines various automatic seriation techniques and discusses further work that is coming to play an essential part in the development of archaeology *Unit Issues in Archaeology* Ann Felice Ramenofsky,Anastasia Steffen,1998 This volume emphasizes one aspect of scientific method units of measure and their construction as applied to archaeology Attributes artifact classes locational designations temporal periods sampling universes culture stages and geographic regions are all examples of constructed units *Archaeology of the Rivas Region, Nicaragua* Paul Healy,2006-01-01 Central America before the Spanish Conquest has often been considered by North American archaeologists as a backwater of peripheral importance located between the advanced ancient civilizations of South America and Mesoamerica Mexican Maya country Recent archaeological research has revealed that this area played a much more significant role in New World cultural history than was previously thought Healy s study examines the archaeological record of one subarea of Southern Central America the Rivas region of Pacific Nicaragua The work gives a detailed analysis of excavations and of artifacts recovered at seven significant prehistoric sites A critical pioneering effort the monograph documents cultural changes occurring over a 2 000 year time period changes in technology material culture settlement subsistence and socio political organization *Graphing Culture Change in North American Archaeology* R. Lee Lyman,2021-06-10 Documentation analysis and explanation of culture change have long been goals of archaeology Scientific graphs facilitate the visual thinking that allow archaeologists to determine the relationship between variables and if well designed comprehend the processes implied by the relationship Different graph types suggest different ontologies and theories of change and particular techniques of parsing temporally

continuous morphological variation of artefacts into types influence graph form North American archaeologists have grappled with finding a graph that effectively and efficiently displays culture change over time Line graphs bar graphs and numerous one off graph types were used between 1910 and 1950 after which spindle graphs displaying temporal frequency distributions of specimens within each of multiple artefact types emerged as the most readily deciphered diagram The variety of graph types used over the twentieth century indicate archaeologists often mixed elements of both Darwinian variational evolutionary change and Midas touch like transformational change Today there is minimal discussion of graph theory or graph grammar in introductory archaeology textbooks or advanced texts and elements of the two theories of evolution are still mixed Culture has changed and archaeology provides unique access to the totality of humankind s cultural past It is therefore crucial that graph theory construction and decipherment are revived in archaeological discussion
