Applied Longitudinal Data Analysis Judith D. Singer, John B. Willett, 2003-03-27 Change is constant in everyday life Infants crawl and then walk children learn to read and write teenagers mature in myriad ways the elderly become frail and forgetful Beyond these natural processes and events external forces and interventions instigate and disrupt change test scores may rise after a coaching course drug abusers may remain abstinent after residential treatment By charting changes over time and investigating whether and when events occur researchers reveal the temporal rhythms of our lives Applied Longitudinal Data Analysis is a much needed professional book for empirical researchers and graduate students in the behavioral social and biomedical sciences It offers the first accessible in depth presentation of two of today s most popular statistical methods multilevel models for individual change and hazard survival models for event occurrence in both discrete and continuous time Using clear concise prose and real data sets from published studies the authors take you step by step through complete analyses from simple exploratory displays that reveal underlying patterns through sophisticated specifications of complex statistical models Applied Longitudinal Data Analysis offers readers a private consultation session with internationally recognized experts and represents a unique contribution to the literature on quantitative empirical methods Visit <http://www.ats.ucla.edu/stat/examples/alda.htm> for Downloadable data sets Library of computer programs in SAS SPSS Stata HLM MLwiN and more Additional material for data analysis

What is Quantitative Longitudinal Data Analysis? Vernon Gayle, Paul Lambert (Lecturer), 2017 Across the social sciences there is widespread agreement that quantitative longitudinal research designs offer analysts powerful scientific data resources But to date most texts on social survey analysis have been written from a statistical rather than a social science data analysis perspective and they lack adequate coverage of common practical challenges This book aims to provide a practical and up to date introduction to influential approaches to quantitative longitudinal data analysis in the social sciences The book will discuss definitions and terms explain the relative attractions of such a design and enumerate in an accessible way the main techniques of analysis explaining their requirements statistical properties and their substantive contribution The book is designed for postgraduates and researchers across the social sciences considering the use of quantitative longitudinal data resources in their research It will also be an excellent text for undergraduate and postgraduate courses on advanced quantitative methods Bloomsbury Publishing

Longitudinal Data Analysis for the Behavioral Sciences Using R Jeffrey D. Long, 2012 This book is a practical guide for the analysis of longitudinal behavioural data Longitudinal data consist of repeated measures collected on the same subjects over time

Longitudinal Categorical Data Analysis Brajendra C. Sutradhar, 2014-10-30 This is the first book in longitudinal categorical data analysis with parametric correlation models developed based on dynamic relationships among repeated categorical responses This book is

a natural generalization of the longitudinal binary data analysis to the multinomial data setup with more than two categories. Thus unlike the existing books on cross sectional categorical data analysis using log linear models this book uses multinomial probability models both in cross sectional and longitudinal setups. A theoretical foundation is provided for the analysis of univariate multinomial responses by developing models systematically for the cases with no covariates as well as categorical covariates both in cross sectional and longitudinal setups. In the longitudinal setup both stationary and non stationary covariates are considered. These models have also been extended to the bivariate multinomial setup along with suitable covariates. For the inferences the book uses the generalized quasi likelihood as well as the exact likelihood approaches. The book is technically rigorous and it also presents illustrations of the statistical analysis of various real life data involving univariate multinomial responses both in cross sectional and longitudinal setups. This book is written mainly for the graduate students and researchers in statistics and social sciences among other applied statistics research areas. However the rest of the book specifically the chapters from 1 to 3 may also be used for a senior undergraduate course in statistics.

Longitudinal Data Analysis Ikuko Funatogawa, Takashi Funatogawa, 2019-02-04. This book provides a new analytical approach for dynamic data repeatedly measured from multiple subjects over time. Random effects account for differences across subjects. Auto regression in response itself is often used in time series analysis. In longitudinal data analysis a static mixed effects model is changed into a dynamic one by the introduction of the auto regression term. Response levels in this model gradually move toward an asymptote or equilibrium which depends on covariates and random effects. The book provides relationships of the autoregressive linear mixed effects models with linear mixed effects models, marginal models, transition models, nonlinear mixed effects models, growth curves, differential equations and state space representation. State space representation with a modified Kalman filter provides log likelihoods for maximum likelihood estimation and this representation is suitable for unequally spaced longitudinal data. The extension to multivariate longitudinal data analysis is also provided. Topics in medical fields such as response dependent dose modifications, response dependent dropouts and randomized controlled trials are discussed. The text is written in plain terms understandable for researchers in other disciplines such as econometrics, sociology and ecology for the progress of interdisciplinary research.
