Partial Differential Equations in Several Complex Variables So-chin Chen, Mei-Chi Shaw, 2001 This book is intended as both an introductory text and a reference book for those interested in studying several complex variables in the context of partial differential equations In the last few decades significant progress has been made in the study of Cauchy Riemann and tangential Cauchy Riemann operators this progress greatly influenced the development of PDEs and several complex variables After the background material in complex analysis is developed in Chapters 1 to 3 thenext three chapters are devoted to the solvability and regularity of the Cauchy Riemann equations using Hilbert space techniques The authors provide a systematic study of the Cauchy Riemann equations and the bar partial Neumann problem including H rmander s L2 existence progress on the globalregularity and irregularity of the bar partial Neumann operators The second part of the book gives a comprehensive study of the tangential Cauchy Riemann equations another important class of equations in several complex variables first studied by Lewy An up to date account of the L2 theory for bar partial b operator is given Explicit integral solution representations are constructed both on the Heisenberg groups and on strictly convex boundaries with estimates in H lder and L2spaces Embeddability of abstract CR structures is discussed in detail here for the first time Titles in this series are co published with International Press Cambridge MA

hypersurfaces holomorphic vector bundles spaces of harmonic forms and Gysin sequences Szego Kernel Asymptotics for High Power of CR Line Bundles and Kodaira Embedding Theorems on CR Manifolds Chin-Yu Hsiao, 2018-08-09 Let X be an abstract not necessarily compact orientable CR manifold of dimension $2n-1$ and let L_k be the k th tensor power of a CR complex line bundle L over X . Given $q \in \mathbb{N}$, let q_k be the Gaffney extension of Kohn Laplacian for q forms with values in L_k . For $0 \leq q \leq n$, let E_q denote the spectral measure of q_k . In this work the author proves that q_k admits asymptotic expansions with respect to k on the non degenerate part of the characteristic manifold of q_k where F_k is some kind of microlocal cut off function. Moreover we show that $F_k q_k$ admits a full asymptotic expansion with respect to k if q_k has small spectral gap property with respect to F_k and q_k is negligible away the diagonal with respect to F_k . By using these asymptotics the authors establish almost Kodaira embedding theorems on CR manifolds and Kodaira embedding theorems on CR manifolds with transversal CR S^1 action. **Geometric Analysis, Mathematical**
