Gregory Wojtkowski,Stanislaw Wrycza,Joze Zupancic,2012-12-06 This book is a result of the ISD 99 Eight International Conference on Information Systems Development Methods and Tools Theory and Practice held August 11 13 1999 in Boise Idaho USA The purpose of this conference was to address the issues facing academia and industry when specifying developing managing and improving information systems ISD 99 consisted not only of the technical program represented in these Proceedings but also of plenary sessions on product support and content management systems for the Internet environment workshop on a new paradigm for successful acquisition of information systems and a panel discussion on current pedagogical issues in systems analysis and design The selection of papers for ISD 99 was carried out by the International Program Committee Papers presented during the conference and printed in this volume have been selected from submissions after formal double blind reviewing process and have been revised by their authors based on the recommendations of reviewers Papers were judged according to their originality relevance and presentation quality All papers were judged purely on their own merits independently of other submissions We would like to thank the authors of papers accepted for ISD 99 who all made gallant efforts to provide us with electronic copies of their manuscripts conforming to common guidelines We thank them for thoughtfully responding to reviewers comments and carefully preparing their final contributions We thank Daryl Jones provost of Boise State University and William Lathen dean College of Business and Economics for their support and encouragement

Advancing Federal Sector Health Care Peter Ramsaroop,Marion J. Ball,David Beaulieu,Judith V. Douglas,2013-11-11 As a result of severe wounds received in World War II I have spent many months in military hospitals including 20 months in an Army hospital immediately after the war I continue to use the Military Health System as do many of my colleagues in Congress because I firmly believe the quality of health care delivered in military and veterans hospitals is second to none The largest system of its type in the world the U S military healthcare system is undergoing changes as dramatic as those experienced by the entire country During Desert Storm we saw new technologies such as telemedicine at work in the field Since then military medicine has continued to improve and develop innovations that often focus on healthcare issues of concern to society as a whole We already have seen technology transfer at work Things we use in our everyday lives from sunscreen to the Internet have come to us directly from innovations developed by federal researchers The private sector working with the public agencies has creatively adapted federal research For example the hemopump is used successfully by heart surgeons world wide to save heart patients This device developed by Richard Wampler was based on satellite technology information that was declassified in the early 1980s The

chapters in this book focus on current federal sector efforts to shape health care and technology transfer Many of the initiatives described involve some degree of partnering between the public and private sectors

Evaluation Methods in Biomedical Informatics Charles P. Friedman,Jeremy Wyatt,2005-10-20 Heavily updated and revised from the successful first edition Appeals to a wide range of informatics professionals from students to on site medical information system administrators Includes case studies and real world system evaluations References and self tests for feedback and motivation after each chapter Great for teaching purposes the book is recommended for courses offered at universities such as Columbia University Precise definition and use of terms

Teaching Mental Health Theo

Stickley,Thurstine Basset,2007-04-30 Mental health service users and carers are increasingly involved in the planning and delivery of a mental health education that gives a real life perspective to the practice of mental health care Teaching and Learning about Mental Health is designed to teach and train new mental health workers using an interdisciplinary approach Divided into three parts the first discusses learning from service users the second looks at innovative practices in teaching and learning and the final part examines several approaches in teaching and learning all illustrated with examples

Trauma Informatics Kimball I. Maull,Jeffrey S. Augenstein,1998-03-16 Information and the technology to rapidly transmit analyze document and disperse this information are increasing arithmetically if not logarithmically Arguably no discipline better exemplifies this trend than medicine It can be further argued that care of the trauma patient is one of the better examples of informatics and the potential benefit to the health professionals who care for these patients Maull and Augenstein have provided us with a primer on informatics and its use in trauma care The subject matter is timely and covers the gamut of trauma care from prehospital to rehabilitation Who will benefit from trauma informatics A simple answer would be anyone who takes care of trauma patients From a broader perspective however at least three examples illustrate how trauma informatics can be used today to exert a positive effect on patient outcome The first example is care of combat casualties including battlefield resuscitation evacuation acute care and ultimate return to the continental United States Current technology is such that via global positioning satellite a corpsman could transmit to a remote area the vital signs and pertinent physical findings of a combat casualty Furthermore the location of the corpsman and the casualty would be precisely known and consultation and destination disposition would be possible The injured person when admitted to a combat support hospital could be continuously monitored and additional remote consultation obtained

Organizational Aspects of Health Informatics Nancy M. Lorenzi,Robert T. Riley,2013-06-29 It has become obvious in recent years that successfully introducing major new systems into complex medical organizations requires an effective blend of good technical and organizational skills The technically best system may be woefully inadequate if its implementation is resisted by people who have low psychological ownership in that system On the other hand people with high ownership can make a technically mediocre system function fairly well ORGANIZATIONAL ASPECTS OF HEALTH INFORMATICS focuses on both the successful strategies for implementation of information systems with medical organizations and also on effective management strategies for the altered organization once the new systems are in place
