**Protected Areas of the World: Nearctic and neotropical**, 1991 Ecosystem Management Mark S. Boyce, Alan W. Haney, 1997-01-01 Until recently natural resource management of such commodities as timber and wildlife was driven largely by the desire to exploit these resources During the past three decades however ecologists have warned that this approach to natural resource management could have unforeseen consequences because it ignored how ecosystems function within the landscape Federal agencies that oversee forest and wildlife resources have begun to implement different schemes of ecosystem management schemes that vary enormously among agencies Contributors to this volume leading experts who are agency personnel as well as researchers now clarify the key elements of sound ecosystem management and offer prescriptions for implementing them The authors discuss definitions of ecosystem management sustainability of ecological systems landscape ecology resource management at different scales and in an ecosystem context new advances in computer technology that facilitate classification schemes for ecosystems ecosystem restoration biological diversity and public concerns Throughout the experts agree that management practices must be sustainable that production of commodities such as amenities as recreation and aesthetics and biodiversity must not be allowed to decline over time

**Biodiversity** Takuya Abe, Simon A. Levin, Masahiko Higashi, 2012-12-06 Despite acknowledgment that loss of living diversity is an international biological crisis the ecological causes and consequences of extinction have not yet been widely addressed In honor of Edward O Wilson winner of the 1993 International Prize for Biology an international group of

distinguished biologists bring ecological evolutionary and management perspectives to the issue of biodiversity The roles of ecosystem processes community structure and population dynamics are considered in this book The goal as Wilson writes in his introduction is to assemble concepts that unite the disciplines of systematics and ecology and in so doing to create a sound scientific basis for the future management of biodiversity

economic stagnation This book will be of interest to researchers NGOs and development organizations Section 1 focuses on climate risk management in tropical Africa Section 2 addresses the water ecosystem agriculture nexus and identifies the best strategies for sustainable water use Section 3 introduces Information Communication Technology ICT and how it can be used for ecosystem and human resilience to improve quality of life in communities Section 4 discusses the science and policies of transformative agriculture including challenges facing crop production and management Section 5 addresses landscape processes human security and governance of agro ecosystems Section 6 concludes the book with chapters uniquely covering the gender dynamics of agricultural ecosystem and livelihood resilience

**High Altitude Primates** Nanda B. Grow, Sharon Gursky-Doyen, Alicia Krzton, 2013-11-19 The basic goal of the volume is to compile the most up to date research on how high altitude affects the behavior ecology evolution and conservation status of primates especially in comparison to lowland populations Historically the majority of primate studies have focused on lowland populations However as the lowlands have been disappearing more and more primatologists have begun studying populations located in higher altitudes High altitude populations are important not only because of their uniqueness but also because they highlight the range of primate adaptability and the complex variables that are involved in primate evolution These populations are good examples of how geographic scales result in diversification and or speciation Yet there have been very few papers addressing how this high altitude environment affects the behavior ecology and conservation status of these primates

Endangered Species  
Threatened Convention Barnabas Dickson, 2013-11-05 The Convention on International Trade in Endangered Species CITES is the best known and most controversial of international conservation treaties Since it came into force 25 years ago debate has raged over its most basic assumptions CITES treats the international trade in wildlife as the most important threat to the continued existence of wild species It offers a prescription of trade bans and restrictions for endangered species However it is now generally acknowledged that for most species habitat loss is a much more significant threat Some argue that the CITES remedy actually exacerbates the problem by removing the incentive to conserve wildlife habitat This collection of essays the first of its kind charts the controversies and changes within CITES It provides case studies of the way CITES has dealt with particular species and notes the growing role of the South in shaping the direction of the treaty It considers the role of sustainable use the precautionary principle and unilateralism within CITES Finally it examines options for the future of CITES Implicit within a number of the contributions is the recognition that questions of wildlife conservation cannot be divorced from wider issues of land use development and social justice This book provides an essential resource for policy makers practitioners academics and students concerned with conservation development and trade
