Quantitative Methods For Assessing The Effects Of Non-tariff Measures And Trade Facilitation Michael J Ferrantino, Philippa Dee, 2005-04-26 As tariffs have fallen worldwide the increasing importance of non tariff policies for further trade liberalization has become widely recognized The methods for assessing the potential effects of such liberalization have lagged significantly behind those available for analyzing tariffs This book is the first volume that comprehensively addresses this gap It has been designed to be useful for both economists and policymakers especially for those involved in communicating ideas and results between economists and policymakers This indispensable book contains cutting edge discussions of the full range of methodologies used in this area including business surveys summary statistics such as effective rates of protection and price gaps time series and panel econometrics and simulation methods such as computable general equilibrium It covers the entire spectrum of policies under discussion in current trade negotiations including trade facilitation services policies quantitative measures customs procedures standards movement of natural persons and anti dumping Some prominent contributors to this book are Bijit Bora World Trade Organization John Wilson Tsunehiro Otsuki and Vlad Manole World Bank Catherine Mann Institute of International Economics Alan Deardorff and Robert Stern University of Michigan Joe Francois Erasmus University Dean Spinanger University of Kiel Antoni Estevadeordal and Kati Suominen Inter American Development Bank Thomas Prusa Rutgers University Thomas Hertel and Terrie Walmsley Purdue University Scott Bradford Brigham Young University Judith Dean Robert Feinberg Soamiely Andriamananjara and Marinos Tsigas US International Trade Commission

Quantitative Methods for Trade-Barrier Analysis Sam Laird, Alexander Yeats, 1990-06-18 Providing an evaluation of procedures for quantifying the effects of non tariff barriers this book examines the theoretical bases for alternative procedures for measuring NTBs effects and also presents a critical survey of previous studies that utilized these empirical studies

Nontariff Measures and International Trade John Christopher Beghin, 2016-11-28 Nontariff Measures and International Trade includes 20 chapters authored by John Beghin and co authors over the last 20 years on the economics of quality standard like nontariff measures in the context of international trade This book provides a coherent and comprehensive treatment of these nontariff measures from their measurement to their effects on trade and welfare In Part I the authors use different perspectives to make the case that unlike tariffs quality standard like nontariff measures are complex to measure and analyze and do not easily lead to general policy prescriptions Then Part II contains contributions on measurements of welfare and trade effects of nontariff measures accounting for potential market imperfections Part III presents chapters on the potential protectionism of nontariff measures when they are used to favor some economic agents over society The last part presents cases studies of nontariff measures in different industries markets and countries

Streamlining Non-Tariff Measures Olivier Cadot, Mariem Malouche, Sebastian Saez, 2012-05-14 This toolkit provides a novel approach and a set of tools for policymakers and analysts to identify non tariff measures NTMs assess their trade restrictiveness and impact on prices and welfare and to strengthen the institutional coordination mechanism transparency and regulatory governance on NTMs

Reforming Non-Tariff Measures Olivier Cadot, Michael J. Ferrantino, Julien Gourdon, José-Daniel Reyes, 2018-06-26 Non tariff measures NTMs in international trade continues to cause trade costs to be high and to impede the further growth of trade and the gains that can be derived from trade This book discusses some of the analytical methods that can be used to estimate the impact of NTMs on international trade and the possible gains from their reform

Measuring Nontariff Trade Policies Robert E. Baldwin, 1989 This paper surveys and critiques various methods of measuring nontariff trade measures NTMs for the purpose of determining which seem most promising for facilitating the process of reducing the trade distorting effects of such policies through multilateral negotiations Four measurement methods are analyzed price impact measures quantity impact measures frequency type measures and welfare measures The general conclusion is that despite a host of difficulties theoretical and empirical analysis has progressed sufficiently far to enable reasonable measures of nontariff policies to be made that are useful for assessing relative sectoral protection across countries and monitoring changes in protection and subsidization levels over time Tariff and subsidy equivalents preferably determined by directly comparing distorted and non distorted prices are the most useful forms of measurement since they focus on the price distorting effects of NTMs and are also concepts with which public and private officials are already familiar However the various other types of measures can be valuable in supplementing the information obtained from tariff and subsidy equivalents

Non Tariff Measures with Market Imperfections John C. Beghin, 2013-06-25 This volume provides a fresh and non dogmatic examination of the emergence on nontariff measures NTMs and their impact on international trade and welfare questioning the traditional premise that most NTMs are protectionist and reduce trade and welfare

Reforming Non-Tariff Measures Olivier Cadot, Michael J. Ferrantino, Julien Gourdon, José-Daniel Reyes, 2018 High levels of trade costs persist in the world trading system despite recent progress in tariff reduction trade facilitation and logistics At least some of these costs can be attributed to non tariff measures NTMs policies imposed by governments other than ordinary customs duties which have an impact on the price at which exports and imports are traded

the quantities traded or both. Such costs are particularly worrisome if they have a discriminatory or protectionist effect or violate countries' international commitments. However, even NTMs designed to carry out domestic regulatory objectives for example protection of human, animal or plant health, consumer or workplace safety or the environment can have substantial effects on international trade which should be considered when such policies are developed. This book discusses some of the analytical methods that can be used to accompany the process of policy development for NTMs. It discusses the broad economic rationale for improving the design of NTMs, illustrates the main forms of quantification of NTMs and their effects including inventory approaches, price based approaches and quantity based approaches, proposes a new analytical and measurable concept of regulatory distance to help guide deep integration efforts at the regional level, provides a discussion of the effects of NTMs on household expenditures, poverty and firm competitiveness and shows how empirical analysis of NTMs can be used to inform policy advice. As such, it should provide a valuable addition to the arsenal of tools available for applied analysis of international trade policy.

Estimating the Bilateral Impact of Nontariff Measures on Trade Michael Bratt, 2017 This paper seeks to estimate how the impact of nontariff measures (NTMs) on trade can vary across exporter-importer pairs. Covering data for the early 2000s, regressions are run at a disaggregate tariff line level and the estimated results are converted into ad valorem equivalents (AVEs). The results underline the importance of conditioning conclusions on trading partners and products and demonstrate that the same NTM can have different even opposite effects across exporting countries. One general pattern that emerges is that low income importers impose more restrictive NTMs but that the capacity for exporting countries to address NTMs increases with GDP per capita.

Exploring Alternative Approaches to Estimate the Impact of Non-tariff Measures and Further Implementation in Simulation Models, 2019 This report generates estimates for the effect of non tariff measures (NTMs) on trade unit values. Adding to the latest development of the NTM analysis, we account for different types of NTMs for pairs of countries/regions. Our estimates thus provide new insights about the bilaterally distinct effect of specific NTMs. This is particularly interesting for policy makers that like to know which types of measures are relevant for trade from or to specific countries/regions and whether they are trade hampering or trade facilitating. We elaborate on the estimation of the price effect measured in trade unit values vis-à-vis the standard gravity on trade quantities measured in trade value. A panel dataset 2012-2015 using the last releases of trade unit values (Berthou, Emlinger 2011) and UNCTAD NTMs global database is built and alternative approaches to account for the distinct bilateral impact are tested on beef, white meat, poultry and pork and milk. The focus is on trade between the EU member states and relevant regions with which the EU is negotiating or has just completed trade agreements (MERCOSUR, ASEAN, Japan and New Zealand). In this report we do not implement the

specific Ad valorem equivalents AVE estimates for NTMs in a simulation model but rather provide a literature review that elaborates on the different approaches to depict NTMs in simulation models The next step would be the application of the AVEs estimated in a simulation model in order to gauge the economy wide effects of the respective NTMs under review

Heterogeneous Effects of Tariff and Non-tariff Trade-policy Barriers in Quantitative General Equilibrium Peter Egger,Katharina Erhardt,2019 Structural quantitative work in international economics typically treats trade policy as log linearly related to trade costs and as exogenous This paper proposes a structural approach that allows for a non parametric relationship and treats tariff and non tariff trade policy variables as potentially endogenous in log linear estimation We document that the data reject the assumption of log linearity of trade costs in both the tariff and the non tariff policy domains Specifically the partial impact of a change in tariffs is strongest for low policy barriers and medium levels of tariffs but generally decreases in the level of both non tariff barriers and tariff barriers To give a relevant illustration we assess the effects of a unilateral increase of US tariffs on Chinese imports by 10 percentage points and document that the estimated effects on real bilateral trade flow changes would be largely underestimated by standard approaches **Quantifying the Trade Impact of Non-tariff Measures** Mike Webb,2018 **The Evolution of Non-tariff Measures and Their Diverse Effects on Trade** Mahdi Ghodsi,Julia Grübler,Oliver Reiter,Robert Stehrer,2017 **The Evolution of Non-tariff Measures and Their Diverse Effects on Trade** Mahdi Ghodsi,Julia Grübler,Oliver Reiter,Robert Stehrer,2017

The Effects of Non-Tariff Measures on Prices, Trade, and Welfare Soamiely Andriamananjara,Judith M. Dean,Michael J. Ferrantino,Robert M. Feinberg,Rodney D. Ludema,Marinos E. Tsigas,2004 The global economic effects of eliminating certain significant categories of non tariff measures NTMs are estimated in a CGE context As a first step a database of institutional information identifying alleged instances of NTMs for particular products and countries is constructed based on WTO U S Government and EU sources and compared with the UNCTAD policy inventory This database is then concorded to a GTAP feasible multiregion multisector aggregation Retail price data from the EIU CityData database similarly concorded are analyzed econometrically taking into account systematic deviations from purchasing power parity to determine whether and to what extent the presence of alleged NTMs is associated with significantly higher prices The estimated price effects are then used to calibrate a CGE simulation in order to obtain simulation estimates of trade and welfare effects of their removal which can be disaggregated Removal of the categories of NTMs under consideration yields global gains on the order of 90 billion These gains arise notably from liberalization by Japan and the European Union by region and from liberalization of apparel and machinery equipment by sector
