Quantitative Techniques in Geography Robert Hammond, Patrick McCullagh, 1974 An Introduction to Statistical Problem Solving in Geography J. Chapman McGrew, Jr., Charles B. Monroe, 2009-04-22 Written for undergraduate geography majors and entry level graduate students with limited backgrounds in statistical analysis and methods McGrew and Monroe provide a comprehensive and understandable introduction to statistical methods in a problem solving framework Engaging examples and problems are drawn from a variety of topical areas in both human and physical geography and are fully integrated into the text Without compromising statistical rigor or oversimplifying the authors stress the importance of written narratives that explain each statistical technique After introducing basic statistical concepts and terminology the authors focus on nonspatial and spatial descriptive statistics They transition to inferential problem solving including probability sampling and estimation before delving deeper into inferential statistics for geographic problem solving The final chapters examine the related techniques of correlation and regression A list of major goals and objectives is included at the end of each chapter allowing students to monitor their own progress and mastery of geographic statistical materials An epilogue offering over 150 geographic situations gives students a chance to figure out which statistical technique should be used for a particular situation *The Geographical Magazine* Michael Huxley, 1978 Vols for 19 include a separate section called GM news and reviews **Statistical Methods and the Geographer** S Gregory, 2014-09-25 First published in 1978 For the non mathematician however even the simpler introductory books on statistics often raise considerable problems In this second edition First some attention has been given to the problem of the transformation of data in order to reinforce the appreciation of the need for normally distributed data for the use of so many techniques Secondly the use of probability paper at least in simple terms has been introduced to illustrate the ways in which the labour of probability assessments can be circumvented Thirdly radical changes have been made plus considerable expansion added to the theme of non parametric testing to provide a more systematic approach to what is a most important group of possible techniques for geographers Fourthly change and expansion are also reflected in the sections on correlation and regression including some simple consideration of curvilinear relationships and the presentation of computational techniques more geared to the use of desk calculators rather than long hand methods Finally the bibliography has also been expanded to incorporate a wider range of books on techniques and a selection of research papers using such techniques in a geographical or near geographical context
