Management Control Systems, Decision-Making, and Innovation Development Dawid Szutowski, 2021-10-03 The systematic approach to innovation development today is one of the world's most prominent scientific fields and with good reason. When applied correctly, such a system produces regular outcomes which consistently drive lasting competitive advantage. Unlike other books on the subject, it proposes an original representation of the CDI model of the relationships between management control system, decision making, quality and innovation system efficiency and explains why management control is fundamental to innovation management. In addition to that, inside the reader will find several original developments. These include the info deficiency I-D model depicting the various parameters hindering decision making in innovation development, the product innovation development PID system offering the original function-based approach to innovation management and the composite innovation index, a specially designed tool intended to evaluate the efficiency of an innovation development system. It will be of interest to researchers, academics, practitioners and advanced students in the fields of management strategy and innovation. Management Control System in Smart and Sustainable Firms Domenica Lavorato, 2025-02-26 In today's competitive environment, smart technologies are increasingly recognized as key enablers of corporate sustainability. In this new context, corporate management control systems integrate with the issues of smart technologies, sustainability and inter and intra-organizational collaboration as the driving elements of the firm of the future. This book proposes a management control framework for today's firms. It investigates the effectiveness of traditional management control systems in today's competitive environment and identifies potential limitations that may hinder their ability to effectively monitor modern organizations. Furthermore, the book explores whether these systems can be improved with complementary tools or if entirely new mechanisms are required. The book argues the need to adopt a new approach to control and a different lens for evaluating the activity of guiding the achievement of corporate objectives, paving the way for the conceptualization of a new management control system.
