Management Of Common Property Natural Resources:

The Management of Common Property Natural Resources Daniel W. Bromley, Michael M. Cernea, 1989 This popular technical paper is currently in its sixth reprinting 10 97 Many development projects require that people be involuntarily resettled to other locations to live and work Governments need adequate policies to minimize the negative effects of this relocation both on the individuals involved and on the national economy This report presents policy guidelines and procedures for World Bank financed projects requiring involuntary resettlement Designed for development specialists social anthropologists and sociologists this volume discusses past Bank projects to illuminate the responsibilities of the governments and the needs of resettlers and host populations during resettlement Among the topics addressed are types of involuntary resettlement basic sociological principles in approaching resettlement policy objectives and strategies reconstruction of the resettlers homes production bases and social organizations and the effects of resettlement on the environment Annexes to this report contain technical checklists for preparing and appraising resettlement plans in projects and for monitoring and evaluating resettlement Michael M Cernea has published and edited several books on the sociological aspects of development Among these books is *Putting People First Sociological Variables in Rural Development* which describes culturally sensitive approaches to the preparation planning and implementation of development projects Other books include *Social Organization and Development Anthropology Social Assessments for Better Development Case Studies in Russia and Central Asia and Urban Environment and Population Relocation* *Common Property Resources* International Union for Conservation of Nature and Natural Resources, 1989

Natural Resources Conservation Law Sairam Bhat, 2010-11-10 This book presents a critical analysis of India's environment pollution and protection scenario following the State Pressure Response framework to analyze the parameters of conservation It advocates that the role of environmental law should not be restricted to mere prevention and control of pollution but should encompass conservation and regeneration of natural resources too The book also reflects on India's management policy regarding resource conservation and highlights the international laws on arbitration in environmental matters It is a one stop reference for all debates and discussions on environment with a global perspective

Managing the Commons, Second Edition John A. Baden, Douglas S. Noonan, 1998-04-22 Garrett Hardin's seminal essay *The Tragedy of the Commons* appeared in 1968 and has been at the center of the debate on commonly owned ground or resources such as Western public grazing or the oceans This is the second edition of a book exploring the issues raised in Hardin's essay As scarce resources are increasingly strained It is ever more crucial to identify those resources which are held in common and are therefore prone to tragic waste and abuses The essay in this volume focus on alternate institutional approaches to managing these resources to prevent such tragedy

Public and Private in Natural Resource Governance Thomas Sikor, 2013-05-13 This volume develops the rich conceptual and empirical content of public private relationships increasingly acknowledged as the dominant realm of natural resource

governance Ten wonderful studies from around the world illuminate opportunities for advancing the theory analysis and effective formation of sustainable systems of resource use The book is excellent for courses in governance and public policy in any resource and environmental field JEFF ROMM PROFESSOR FOR RESOURCE POLICY UNIVERSITY OF CALIFORNIA AT BERKELEY US The book addresses the theoretically and politically most important division of social organization into public and private The authors bring an exciting multidisciplinary perspective to bear on changing and multiple publics and the strength of relationships connecting these two spheres in rural development and natural resource governance The contributions range from consumer health and food safety soil science forestry and water management to sociological and economic aspects of natural resource property and governance FRANZ VON BENDA BECKMANN MAX PLANCK INSTITUTE FOR SOCIAL ANTHROPOLOGY GERMANY Natural resources have historically been considered as being governed in public or private spheres that is by the state on behalf of the people or by companies or individuals driven by the market This dichotomy between private and public is now recognized as overly simplistic and it is clear that publics and privates operate at a range of levels and with differing degrees of separation or overlap Bringing together a group of internationally respected researchers this book provides a new perspective on prominent issues in resource governance including the state NGOs civil society communities participation devolution privatization and hybrid institutions highlighting the three dimensional nature of relations between public and private It builds on empirical analyses from six fields of natural resource governance agri environment biodiversity bioenergy food quality and safety forestry and rural water and employs a comparative approach that goes beyond the specificities of individual policy fields recognizing shared elements and allowing for a greater understanding of the dynamics underlying governance processes Introductions to the volume and to each section summarize the key debates and highlight linkages between chapters This is essential reading for academics students and policy experts in natural resource governance development and environmental policy

Natural Resources as Capital Larry Karp, 2017-11-24 An introduction to the concepts and tools of natural resource economics including dynamic models market failures and institutional remedies This introduction to natural resource economics treats resources as a type of capital their management is an investment problem requiring forward looking behavior within a dynamic setting Market failures are widespread often associated with incomplete or nonexistent property rights complicated by policy failures The book covers standard resource economics topics including both the Hotelling model for nonrenewable resources and models for renewable resources The book also includes some topics in environmental economics that overlap with natural resource economics including climate change The text emphasizes skills and intuition needed to think about dynamic models and institutional remedies in the presence of both market and policy failures It presents the nuts and bolts of resource economics as applied to nonrenewable resources including the two period model stock dependent costs and resource scarcity The chapters on renewable resources cover such topics as property rights as an alternative to regulation the growth function

steady states and maximum sustainable yield using fisheries as a concrete setting Other less standard topics covered include microeconomic issues such as arbitrage and the use of discounting policy problems including the Green Paradox foundations for policy analysis when market failures are important and taxation Appendixes offer reviews of the relevant mathematics The book is suitable for use by upper level undergraduates or with the appendixes masters level courses Halting Degradation of Natural Resources Jean-Marie Baland, Jean-Philippe Platteau, 1996 Stress is then laid on the global context within which user groups operate including the nature and the forms of state intervention and the effects of increasing market integration To date this context has generally been uncongenial to community based resource management therefore the authors recommend that whenever a co management approach is feasible the concrete institutional form adopted is tailored to the specific features of local cultures Managing the Commons John A. Baden, Douglas S. Noonan, 2017-08-15 Managing natural resources that are held in common is a great and grave challenge It requires addressing the community of users beneficiaries and managers It also requires consideration of how those communities interact with the commons itself At stake is the prosperity and even survival of both the people and the environment Understanding and improving how we relate to commons has been the focus of much scholarly and practical research in the last 30 years A quick look at the various natural resource commons surrounding us indicates that this will no doubt continue Pacific Northwest salmon fisheries represent a system of commons both complex and illustrative My past history as administrator of the US Environmental Protection Agency and my fisherman s interest in salmon has heightened my sensitivity to the plight of the salmon and the people whose lives they affect Recently my wife and I moved back to the Pacific North west something the salmon try to do every year as they live out their inspiring life cycles Unlike us the salmon do not always find a hospitable environment when they return There are many reasons Simply put there are more people in the salmon s way and they struggle more with the problems that come with expanding human populations A number of reports issued over the past few years have chronicled the broad declines and local extinction of many salmon steelhead and sea run cutthroat stocks in the region The people who fish for a living and the communities in which they live have been hit hard Our resource agencies are in danger of being overwhelmed by the complexity and magnitude of the problem Why are salmon faring so poorly Who is responsible What can be done to reverse the recent declines in salmon populations When tragedy befalls a commons as it has the salmon I come to no conclusion about who is at fault and I don t intend to The one thing that I am certain of is that the only truly innocent parties in all of this are the salmon and the generations of people yet to come It seems to me that the responsibility falls upon all of us fishermen resource managers and concerned citizens alike to take the steps necessary to ensure that salmon populations recover to the point that our children will be able to enjoy the quality of life we once took for granted While many people focus on how to get the most from commons groups like the Sustainable Fisheries Foundation emphasize providing and maintaining those natural resources Their goal is deceptively simple We are trying to put more

salmon back in the rivers and lakes of the Pacific Northwest Determining exactly how to accomplish this goal has defied the efforts of a great many dedicated and talented people Many papers and panel discussions especially reports on the status and trend of wild salmon populations in the North Pacific make it clear that many salmon stocks in parts of the lower United States southern British Columbia and the west coast of Vancouver Island are not faring well The decline in salmon numbers in these areas corresponds with a rapidly expanding human population alterations in land and water use increasing sediment and containment loads and heavy fishing pressure by a combination of sport commercial and tribal groups **DAC**
