**Disintegration** Andrei Martyanov, 2021-05-01 The United States is undergoing a profound and radical transformation all features of which point to the fact of its departure at an accelerated rate from its largely self proclaimed status as a global hegemon The United States has lost ground in every single category that defines the power and status of a nation in relation to its rivals This book delves into the reasons for a catastrophic decline of the American nation addressing a range of factors from the economic especially energy to cultural technological and military factors America's deindustrialized economy is now deeply affected by what can only be described as a massacre of her small and middle size businesses and the implosion of the US commercial aerospace industry America's only driver of real growth the shale oil industry is facing realities which may make the Great Depression pale in comparison Disintegration also seeks answers to the precipitous moral and professional decline of the always mediocre qualities of the American elites from the corridors of political power to those of the military and business now spiraling out of control More alarmingly the trend also points to the possibility of the actual physical disintegration of the United States as a unified entity whether the divisions are ethnic or ideological The most profound fault line is cultural between the Coastal self proclaimed elites backed by the secular liberal media and deep state who promote the most radical ideologies as it concerns gender and race and the working class majority whom the former polemicize as deplorables Christian fundamentalists white supremacists and climate and science denialists Investigating these factors sheds light on America's future which holds very little promise for the country which had once proclaimed itself to be a shining city on the hill The American collapse is not just coming we are presently experiencing it How can we deal with a catastrophe which is

unfolding before our very eyes Disintegration lays out some possibilities      **Aircraft Design Projects** Lloyd R. Jenkinson, Jim Marchman, 2003-04-28 Written with students of aerospace or aeronautical engineering firmly in mind this is a practical and wide ranging book that draws together the various theoretical elements of aircraft design structures aerodynamics propulsion control and others and guides the reader in applying them in practice Based on a range of detailed real life aircraft design projects including military training commercial and concept aircraft the experienced UK and US based authors present engineering students with an essential toolkit and reference to support their own project work All aircraft projects are unique and it is impossible to provide a template for the work involved in the design process However with the knowledge of the steps in the initial design process and of previous experience from similar projects students will be freer to concentrate on the innovative and analytical aspects of their course project The authors bring a unique combination of perspectives and experience to this text It reflects both British and American academic practices in teaching aircraft design Lloyd Jenkinson has taught aircraft design at both Loughborough and Southampton universities in the UK and Jim Marchman has taught both aircraft and spacecraft design at Virginia Tech in the US Demonstrates how basic aircraft design processes can be successfully applied in reality Case studies allow both student and instructor to examine particular design challenges Covers commercial and successful student design projects and includes over 200 high quality illustrations
