Catalog of Books and Reports in the Bureau of Mines Technical Library, Pittsburgh, Pa United States. Bureau of Mines. Technical Library, Pittsburgh, 1968 The Last Man Who Knew Everything David N. Schwartz, 2017-12-05 The definitive biography of the brilliant charismatic and very human physicist and innovator Enrico Fermi In 1942 a team at the University of Chicago achieved what no one had before a nuclear chain reaction At the forefront of this breakthrough stood Enrico Fermi Straddling the ages of classical physics and quantum mechanics equally at ease with theory and experiment Fermi truly was the last man who knew everything at least about physics But he was also a complex figure who was a part of both the Italian Fascist Party and the Manhattan Project and a less than ideal father and husband who nevertheless remained one of history's greatest mentors Based on new archival material and exclusive interviews The Last Man Who Knew Everything lays bare the enigmatic life of a colossus of twentieth century physics Publications of Goddard Space Flight Center Goddard Space Flight Center, **Theory, Evidence, Data: Themes from George E. Smith** Marius Stan, Christopher Smeenk, 2023-11-27 This book builds on the path breaking work of George E Smith and further explores the notions of evidence and confirmation in the exact sciences from two perspectives conceptual and historical Contributions in this volume investigate the philosophical presuppositions explanatory scope and historical precursors of evidence in mathematical physics and related disciplines The papers are written by and of interest to philosophers and historians of science Catalogue of Title-entries of Books and Other Articles Entered in the Office of the Librarian of Congress, at Washington, Under the Copyright Law ... Critique of the Psycho-Physical Identity Theory Eric P. Polten,2019-05-20 No detailed description available for Critique of the Psycho Physical Identity Theory **Quantum Mechanics and Objectivity** Patrick A. Heelan,2012-12-06 Quantum mechanics has raised in an acute form three problems which go to the heart of man's relationship with nature through experimental science 1 the public objectivity of science that is its value as a universal science for all investigators 2 the empirical objectivity of scientific objects that is man's ability to construct a precise or causal spatio temporal model of microscopic systems and finally 3 the formal objectivity of science that is its value as an expression of what nature is independently of its being an object of human knowledge These are three aspects of what is generally called the crisis of objectivity or the crisis of realism in modern physics This crisis is studied in the light of Werner Heisenberg's work Heisenberg was one of the architects of quantum mechanics and we have chosen his writings as the principal source material for this study Among physicists of the microscopic domain no one except perhaps Bohr has expressed himself so abundantly and so profoundly on the philosophy of science as Heisenberg His writings both technical and non technical show an awareness of the mysterious element in scientific knowledge far from the facile positivism of Bohr and others of his contemporaries The mystery of human knowledge and human Subjectivity is for him an abiding source of wonder **Mary B. Hesse (1924-2016): Metaphors, Models, and the Growth of Scientific Knowledge** Pietro Gori,2025-08-20 This

volume explores the work of Mary B Hesse 1924 2016 a pivotal figure in twentieth century philosophy of science At a time when the foundations of an integrated approach to the history and philosophy of science were being established Hesse as a female philosopher offered a distinctive and influential contribution grounded in a post empiricist understanding of the natural sciences Central to her thought was a focus on the metaphorical and analogical value of scientific language in contrast to views assessing its literal significance Hesse also departed from traditional hypothetico deductive accounts of scientific methodology and theory structure advancing instead perspectives rooted in both historical and contemporary scientific practices To mark the centenary of her birth this book brings together an international group of scholars to re examine and engage with Hesse s intellectual legacy The chapters address the central themes of her work and situate them within her broader philosophical context Each contribution adopts a cross disciplinary perspective highlighting the continued relevance of Hesse s ideas to current debates in the philosophy of science This volume will be of particular interest to scholars in the history and philosophy of science as well as those engaged in gender studies and the study of women in philosophy

Genius James Gleick, 1993-11-02 To his colleagues Richard Feynman was not so much a genius as he was a full blown magician someone who does things that nobody else could do and that seem completely unexpected The path he cleared for twentieth century physics led from the making of the atomic bomb to a Nobel Prize winning theory of quantum electrodynamics to his devastating expos of the Challenger space shuttle disaster At the same time the ebullient Feynman established a reputation as an eccentric showman a master safe cracker and bongo player and a wizard of seduction Now James Gleick author of the bestselling *Chaos* unravels the dense skein of Feynman s thought as well as the paradoxes of his character in a biography which was nominated for a National Book Award of outstanding lucidity and compassion

El-Hi Textbooks in Print, 1962 **Concepts of Classical Optics** John Strong, 2012-04-26 An intermediate course in optics this volume explores both experimental and theoretical concepts offering a practical knowledge of geometrical optics with a minimum of mathematical detail 1958 edition
