These six volumes include approximately 20 000 reviews of items in number theory that appeared in Mathematical Reviews between 1984 and 1996 This is the third such set of volumes in number theory The first was edited by W J LeVeque and included reviews from 1940 1972 the second was edited by R K Guy and appeared in 1984 **Automatic Sequences**
Jean-Paul Allouche,Jeffrey Shallit,2003-07-21 Uniting dozens of seemingly disparate results from different fields this book combines concepts from mathematics and computer science to present the first integrated treatment of sequences generated by finite automata The authors apply the theory to the study of automatic sequences and their generalizations such as Sturmian words and k regular sequences And further they provide applications to number theory particularly to formal power series and transcendence in finite characteristic physics computer graphics and music Starting from first principles wherever feasible basic results from combinatorics on words numeration systems and models of computation are discussed Thus this book is suitable for graduate students or advanced undergraduates as well as for mature researchers wishing to know more about this fascinating subject Results are presented from first principles wherever feasible and the book is supplemented by a collection of 460 exercises 85 open problems and over 1600 citations to the literature *The Cumulative Book Index* ,1991 A world list of books in the English language International Books in Print, 1995 Barbara Hopkinson,[Anonymus AC01401231],1995 **Pacific Journal of Mathematics** ,1997 □□□□□□□□□□□□□□□□ □□□□□ □ (Japan),1900 *Bibliographic Guide to Conference Publications* New York Public Library.
