Hans-Gill,2012-12-06 The Indian National Science Academy on the occasion of the Golden Jubilee Celebration Fifty years of India s Independence decided to publish a number of monographs on the selected fields The editorial board of INS A invited us to prepare a special monograph in Number Theory In reponse to this assignment we invited several eminent Number

Theorists to contribute expository research articles for this monograph on Number Theory. Although some of those invited due to other preoccupations could not respond positively to our invitation, we did receive a fairly encouraging response from many eminent and creative number theorists throughout the world. These articles are presented herewith in a logical order. We are grateful to all those mathematicians who have sent us their articles. We hope that this monograph will have a significant impact on further development in this subject.

R. P. Bambah, V. C. Dumir, R. J. Hans Gill, A Centennial History of the Prime Number Theorem, Tom M. Apostol, The Prime Number Theorem. Among the thousands of discoveries made by mathematicians over the centuries, some stand out as significant landmarks. One of these is the prime number theorem, which describes the asymptotic distribution of prime numbers. It can be stated in various equivalent forms, two of which are $\pi(x) \sim \frac{x}{\log x}$ and $\sum_{p \leq x} \frac{1}{p} \sim \log \log x$. In $\pi(x)$, π denotes the number of primes $P \leq x$ for any $x > 0$.

Number Theory and Related Fields Jonathan M. Borwein, Igor Shparlinski, Wadim Zudilin, 2013-05-16. Number Theory and Related Fields collects contributions based on the proceedings of the International Number Theory Conference in Memory of Alf van der Poorten, hosted by CARMA and held March 12-16th 2012 at the University of Newcastle, Australia. The purpose of the conference was to promote number theory research in Australia while commemorating the legacy of Alf van der Poorten, who had written over 170 papers on the topic of number theory and collaborated with dozens of researchers. The research articles and surveys presented in this book were written by some of the most distinguished mathematicians in the field of number theory, and articles will include related topics that focus on the various research interests of Dr. van der Poorten.

Number Theory Takashi Aoki, Shigeru Kanemitsu, Jianya Liu, 2010. This volume aims at collecting survey papers which give broad and enlightening perspectives of various aspects of number theory. Kitaoka's paper is a continuation of his earlier paper published in the last proceedings and pushes the research forward. Browning's paper introduces a new direction of research on analytic number theory. O'Connor's quantitative theory of some surfaces and Bruedern et al.'s paper details the state of the art affairs of additive number theory. There are two papers on modular forms: O'Connor's paper describes generalized modular forms (GMF) which has some applications in conformal field theory, while Liu's paper is very useful for readers who want to have a quick introduction to Maass forms and some analytic number theoretic problems related to them. Matsumoto et al.'s paper gives a very thorough survey on functional relations of root system zeta functions. Hoshi's paper is a continuation of Miyake's long and fruitful research on generic polynomials and gives rise to related Diophantine problems, and Jia's paper surveys some dynamical aspects of a special arithmetic function connected with the distribution of prime numbers. There are two papers of collections of problems: by Shparlinski on exponential and character sums, and Schinzel on polynomials, which will serve as an aid for finding suitable research problems. Yamamura's paper is a complete bibliography on determinant expressions for a certain class number and will be useful to researchers. Thus, the book gives a good balance of classical and modern aspects in number theory and will be useful to researchers, including enthusiastic graduate students.
