Medical Reasoning Erwin B. Montgomery (Jr.), 2019 Modern medicine is one of humankind's greatest achievements Yet today frequent medical errors and irreproducibility in biomedical research suggest that tremendous challenges beset it Understanding these challenges and trying to remedy them have driven considerable and thoughtful critical analyses but the apparent intransigence of these problems suggests a different perspective is needed Now more than ever when we see options and opportunities for healthcare expanding while resources are diminishing it is extremely important that healthcare professionals practice medicine wisely In Medical Reasoning neurologist Erwin B Montgomery Jr offers a new and vital perspective He begins with the idea that the need for certainty in medical decision making has been the primary driving force in medical reasoning Doctors must routinely confront countless manifestations of symptoms diseases or behaviors in their patients Therefore either there are as many different diseases as there are patients or some economical set of principles and facts can be combined to explain each patient's disease The response to this epistemic conundrum has driven medicine throughout history the challenge is to discover principles and facts and then to develop means to apply them to each unique patient in a manner that provides certainty This book studies the nature of medical decision making systematically and rigorously in both an analytic and historical context addressing medicine's unique need for certainty in the face of the enormous variety of diseases and in the manifestations of the same disease in different patients The book also examines how the social legal and economic circumstances in which medical decision making occurs greatly influence the nature of medical reasoning Medical Reasoning is essential for those at the intersection of healthcare and philosophy
