Jones, 2018-02-15 Offering readers much to ponder Richard H Jones approaches the big questions of philosophy such as the nature of reality consciousness free will the existence of God and the meaning of life not by weighing the merits of leading arguments in these debates but instead by questioning the extent to which we are even in a position to answer such questions in the first place Regardless of continuous technical and even groundbreaking advances in knowledge there will always be gaps in what we can fully understand Distinguishing true mysteries from problems yet to be solved but within the scope of our intellectual grasp Jones provides a penetrating and high level overview of the scope and limits of scientific and philosophical inquiry **Metaphysics and Epistemology** Stephen Hetherington, 2013-06-25 Metaphysics and Epistemology A Guided Anthology presents a comprehensive introductory overview of key themes thinkers and texts in metaphysics and epistemology Presents a wide ranging collection of carefully excerpted readings on metaphysics and epistemology Blends classic and contemporary works to reveal the historical development and present directions in the fields of metaphysics and epistemology Provides succinct insightful commentary to introduce the essence of each selection at the beginning of chapters which also serve to inter link the selected writings **Fundamentals of Philosophy** John Shand, 2004-03-01 Fundamentals of Philosophy is a comprehensive and accessible introduction to philosophy Based on the

Making Things Up Karen Bennett, 2017-05-19 A certain kind of talk is ubiquitous among both philosophers and so called ordinary people talk of one phenomenon generating or giving rise to another or talk of one phenomenon being based in or constructed from another For example your computer screen is built of atoms in a complex configuration and the picture on the screen is based in the local illumination of various individual pixels Karen Bennett calls the family of relations invoked by such talk building relations Grounding is one currently popular such relation so too are composition property realization and controversially causation In chapters 2 and 3 Bennett argues that despite their differences building relations form an interestingly unified family and characterizes what all building relations have in common In chapter 4 she argues that it's a mistake to think there is a strict divide between causal and noncausal determination Chapters 5 and 6 turn to the connections between building and fundamentality Bennett argues at length that both absolute and relative fundamentality are best understood in terms of building and that to say that one thing is more fundamental than another is to say no more than that certain patterns of building obtain In chapter 7 Bennett argues that facts about what builds what must be themselves built if a builds b there is something in virtue of which that is the case She also argues that the answer is a itself Finally in chapter 8 she defends an assumption that runs throughout the rest of the book namely that there indeed are nonfundamental built entities Doing so involves substantive discussion about the scope of Ockham's Razor Bennett argues that some nonfundamentalia are among the proper subject matter of metaphysics and thus that metaphysics is not best understood as the study of the fundamental nature of reality
