Scrutinizing Science Empirical Studies Of Scientific Change:

Scrutinizing Science A Donovan, R Laudan, 1988-05-31 Kuhn's 'The Structure of Scientific Revolutions' John Preston, 2008-06-07 Thomas Kuhn's *The Structure of Scientific Revolutions* is arguably one of the most influential books of the twentieth century and a key text in the philosophy and history of science. Kuhn transformed the philosophy and history of science in the twentieth century in an irrevocable way and still provides an important alternative to formalist approaches in the philosophy of science. In Kuhn's *The Structure of Scientific Revolutions* A Reader's Guide John Preston offers a clear and thorough account of this key philosophical work. The book offers a detailed review of the key themes and a lucid commentary that will enable readers to rapidly navigate the text. The guide explores the complex and important ideas inherent in the text and provides a cogent survey of the reception and influence of Kuhn's work.

Defining Science Charles Alan Taylor, 1996 The most interesting entry point to the demarcation problem in science since Popper's seminal formulation. Steve Fuller, Professor of Sociology, Social Policy, Durham University. What is science? What isn't science? And who draws the line between them? These are rhetorical concerns, as Charles A. Taylor demonstrates in this ambitious book about the theoretical and cultural underpinnings of scientific practice. By showing how boundaries between science and nonscience are rhetorically constructed and socially enforced, *Defining Science* reveals the political and philosophical significance of such distinctions. Taylor examines the traditional demarcation problem, the problem of defining the boundaries of science as an ongoing rhetorical negotiation involving a full range of historical interests and social actors, from researchers and lab technicians to governmental and industrial patrons, program administrators, political representatives, journalists, and educators. His case studies of the recent debates over creationism and cold fusion clearly demonstrate how the rhetorical dynamics of science operate within different fields. In both cases presented here, with concision and insight, prevailing demarcations or defining portrayals of science emerge as far more nuanced than traditional accounts allow. Taylor analyzes traditional approaches to demarcation in science in order to incorporate their insights into his larger rhetorical view. His reformulation of philosophical, historical, and sociological accounts of science clearly illustrates the intellectual value of an interdisciplinary rhetoric of demarcation. Furthermore, *Defining Science* suggests how we as a community can positively influence future constructions of science and society. This book confronts what is arguably the late twentieth century's definitive problem in a provocative and interesting way. It will be of interest to anyone engaged with the question of knowledge in public life. Charles Arthur Willard, Professor and Chair of the Department of Communication, University of Louisville.

Critical Appraisal of Physical Science as a Human Enterprise Mansoor Niaz, 2009-02-07 It is generally believed that doing science means accumulating empirical data with no or little reference to the interpretation of the data based on the scientist's theoretical framework or presuppositions. Holton (1969a) has deplored the widely accepted myth of experimenticism, according to which progress in science is presented as the inexorable result of the pursuit of logically sound conclusions from unambiguous experimental data.

Surprisingly some of the leading scientists themselves Millikan is a good example have contributed to perpetuate the myth with respect to modern science being essentially empirical that is carefully tested experimental facts free of a priori conceptions leading to inductive generalizations Based on the existing knowledge in a field of research a scientist formulates the guiding assumptions Laudan et al 1988 presuppositions Holton 1978 1998 and hard core Lakatos 1970 of the research program that constitutes the imperative of presuppositions which is not abandoned in the face of anomalous data Laudan and his group consider the following paraphrase of Kant by Lakatos as an important guideline philosophy of science without history of science is empty Starting in the 1960s this historical school has attempted to redraw and replace the positivist or logical empiricist image of science that dominated for the first half of the twentieth century Among other aspects one that looms large in these studies is that of guiding assumptions and has considerable implications for the main thesis of this monograph Chapter 2

Dictionary of Modern American Philosophers John R. Shook, 2005-01-01 The Dictionary of Modern American Philosophers includes both academic and non academic philosophers and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in the development of psychology pedagogy sociology anthropology education theology political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought

How Successful is Naturalism?
Georg Gasser,2013-05-02 Naturalism is the reigning creed in analytic philosophy Naturalists claim that natural science provides a complete account of all forms of existence According to the naturalistic credo there are no aspects of human existence which transcend methods and explanations of science Our concepts of the self the mind subjectivity human freedom or responsibility is to be defined in terms of established sciences The aim of the present volume is to draw the balance of naturalism s success so far Unlike other volumes it does not contain a collection of papers which unanimously reject naturalism Naturalists and anti naturalists alike unfold their positions discussing the success or failure of naturalistic approaches How successful is naturalism shows where the lines of agreement and disagreement between naturalists and their critics are to be located in contemporary philosophical discussion With contributions of Rudder Lynne Baker Johannes Brandl Helmut Fink Ulrich Frey Georg Gasser Matthias Stefan Peter S M Hacker Winfried L ffler Nancey Murphy Josef Quitterer Michael Rea Thomas Sukopp Konrad Talmont Kaminski and Gerd Vollmer
