Search in Artificial Intelligence Leveen Kanal,Vipin Kumar,2012-12-06 Search is an important component of problem solving in artificial intelligence AI and more generally in computer science engineering and operations research Combinatorial optimization decision analysis game playing learning planning pattern recognition robotics and theorem proving are some of the areas in which search algorithms play a key role Less than a decade ago the conventional wisdom in artificial intelligence was that the best search algorithms had already been invented and the likelihood of finding new results in this area was very small Since then many new insights and results have been obtained For example new algorithms for state space AND OR graph and game tree search were discovered Articles on new theoretical developments and experimental results on backtracking heuristic search and constraint propagation were published The relationships among various search and combinatorial algorithms in AI Operations Research and other fields were clarified This volume brings together some of this recent work in a manner designed to be accessible to students and professionals interested in these new insights and developments

Hands-On Artificial Intelligence for Search Devangini Patel,2018-08-30 Make your searches more responsive and smarter by applying Artificial Intelligence to it Key Features Enter the world of Artificial Intelligence with solid concepts and real world use cases Make your applications intelligent using AI in your day to day apps and become a smart developer Design and implement artificial intelligence in searches Book Description With the emergence of big data and modern technologies AI has acquired a lot of relevance in many domains The increase in demand for automation has generated many applications for AI in fields such as robotics predictive analytics finance and more In this book you will understand what artificial intelligence is It explains in detail basic search methods Depth First Search DFS Breadth First Search BFS and A Search which can be used to make intelligent decisions when the initial state end state and possible actions are known Random solutions or greedy solutions can be found for such problems But these are not optimal in either space or time and efficient approaches in time and space will be explored We will also understand how to formulate a problem which involves looking at it and identifying its initial state goal state and the actions that are possible in each state We also need to understand the data structures involved while implementing these search algorithms as they form the basis of search exploration Finally we will look into what a heuristic is as this decides the quality of one sub solution over another and helps you decide which step to take What you will learn Understand the instances where searches can be used Understand the algorithms that can be used to make decisions more intelligent Formulate a problem by specifying its initial state goal state and actions Translate the concepts of the selected search algorithm into code Compare how basic search algorithms will perform for the application Implement algorithmic programming using code examples Who this book is for This book is for developers who are keen to get started with Artificial Intelligence and develop practical AI based applications Those developers who want to upgrade their normal applications to smart and intelligent versions will find this book useful A
