Searching Multimedia Databases By Content:

Searching Multimedia Databases by Content Christos Faloutsos, 2012-12-06 Searching Multimedia Databases by Content bridges the gap between the database and signal processing communities by providing the necessary background information for the reader and presenting it along with the intuition and mechanics of the best existing tools in each area The first half of Searching Multimedia Databases by Content reviews the most successful database access methods in increasing complexity reaching up to spatial access methods and text retrieval In all cases the emphasis is on practical approaches that have been incorporated in commercial systems or that seem very promising The second half of the book uses the above access methods to achieve fast searching in a database of signals A general methodology is presented which suggests extracting a few good features from each multimedia object thus mapping objects into points in a metric space Finally the book concludes by presenting some recent successful applications of the methodology on time series and color images Searching Multimedia Databases by Content is targeted towards researchers and developers of multimedia systems The book can also serve as a textbook for a graduate course on multimedia searching covering both access methods as well as the basics of signal processing

[Handbook of Video Databases](#) Borko Furht, Oge Marques, 2003-09-30 Technology has spurred the growth of huge image and video libraries many growing into the hundreds of terabytes As a result there is a great demand among organizations for the design of databases that can effectively support the storage search retrieval and transmission of video data Engineers and researchers in the field demand a comprehensive reference that will help them design and implement the most complex video database projects Handbook of Video Databases Design and Applications presents a thorough overview in 45 chapters from more than 100 renowned experts in the field This book provides the tools to help overcome the problems of storage cataloging and retrieval by exploring content standardization and other content classification and analysis methods The challenge of these complex problems make this book a must have for video database practitioners in the fields of image and video processing computer vision multimedia systems data mining and many other diverse disciplines

[Database Management System](#) Manish Soni, 2024-11-13 Welcome to the world of Database Management System This book is your gateway to understanding the fundamental concepts principles and practices that underpin the efficient and effective management of data in modern information systems In today's data driven age where information is often referred to as the new oil the role of DBMS cannot be overstated Whether you are a student embarking on a journey of discovery a professional seeking to enhance your knowledge or an entrepreneur aiming to harness the power of data for your business this book will serve as your comprehensive guide This Book Matters because Databases are the backbone of nearly every organization from multinational corporations to small start ups They store organize and retrieve data critical for decision making customer service product development and more Understanding how to design implement and manage databases is a vital skill in the digital age

Digital Media Information Base: Proceedings Of The

International Symposium Masatoshi Yoshikawa, Yahiko Kambayashi, Shunsuke Uemura, 1998-03-12 With the rapid growth of computer and communication technologies the creation modification and distribution of digital multimedia information have become easier than ever Such multimedia information includes still images video audio texts and artifacts in virtual space The efficient storage of valuable information and rapid access to it is crucial to all modern organizations This proceedings volume consists of papers by researchers and academicians which explore the various aspects of the digital media information base A special emphasis is placed on new database system technologies *Database System Concepts (Volume 2)* N.B. Singh, 2020 Database System Concepts Volume 2 is a continuation of the foundational principles introduced in Volume 1 offering a deeper exploration into advanced topics of database systems Building upon the basics of data storage organization and management covered previously this volume delves into specialized areas such as distributed databases real time transaction systems main memory databases and advanced query processing techniques Through clear relatable examples readers will gain a robust understanding of how modern databases handle complex challenges such as maintaining consistency availability and security in distributed and cloud based environments Designed for readers with foundational knowledge and those looking to specialize further Database System Concepts Volume 2 is an indispensable resource for mastering the intricacies of database design implementation and maintenance in today's data driven world *Nearest Neighbor Search:* Apostolos N. Papadopoulos, Yannis Manolopoulos, 2006-11-22 Modern applications are both data and computationally intensive and require the storage and manipulation of voluminous traditional alphanumeric and nontraditional data sets images text geometric objects time series Examples of such emerging application domains are Geographical Information Systems GIS Multimedia Information Systems CAD CAM Time Series Analysis Medical Information Systems On Line Analytical Processing OLAP and Data Mining These applications pose diverse requirements with respect to the information and the operations that need to be supported From the database perspective new techniques and tools therefore need to be developed towards increased processing efficiency This monograph explores the way spatial database management systems aim at supporting queries that involve the space characteristics of the underlying data and discusses query processing techniques for nearest neighbor queries It provides both basic concepts and state of the art results in spatial databases and parallel processing research and studies numerous applications of nearest neighbor queries

Artificial Intelligence Techniques for Computer Graphics Dimitri Plemenos, Georgios Miaoulis, 2008-10-02 The purpose of this volume is to present current work of the Intelligent Computer Graphics community a community growing up year after year Indeed if at the beginning of Computer Graphics the use of Artificial Intelligence techniques was quite unknown more and more researchers all over the world are nowadays interested in intelligent techniques allowing substantial improvements of traditional Computer Graphics methods The other main contribution of intelligent techniques in Computer Graphics is to allow invention of completely new methods often based on automation of a lot of tasks assumed in the past by the user in an

imprecise and human time consuming manner The history of research in Computer Graphics is very edifying At the beginning due to the slowness of computers in the years 1960 the unique research concern was visualisation The purpose of Computer Graphics researchers was to find new visualisation algorithms less and less time consuming in order to reduce the enormous time required for visualisation A lot of interesting algorithms were invented during these first years of research in Computer Graphics The scenes to be displayed were very simple because the computing power of computers was very low So scene modelling was not necessary and scenes were designed directly by the user who had to give coordinates of vertices of scene polygons

Advances in Databases Suzanne M. Embury, 1998-06-15 This book consists of the refereed proceedings of the 15th British National Conference on Databases BNCOD 15 held in London in July 1997 The 12 revised full papers presented were selected from more than 30 submissions Also included are 10 poster presentations and the invited lecture on The Role of Intelligent Software Agents in Advanced Information Systems by Larry Kerschberg The papers are organized in topical sections on transaction processing optimization object orientation and the Internet and database integration

Three-Dimensional Model Analysis and Processing Faxin Yu, Zheming Lu, Hao Luo, Pinghui Wang, 2011-02-03 With the increasing popularization of the Internet together with the rapid development of 3D scanning technologies and modeling tools 3D model databases have become more and more common in fields such as biology chemistry archaeology and geography People can distribute their own 3D works over the Internet search and download 3D model data and also carry out electronic trade over the Internet However some serious issues are related to this as follows 1 How to efficiently transmit and store huge 3D model data with limited bandwidth and storage capacity 2 How to prevent 3D works from being pirated and tampered with 3 How to search for the desired 3D models in huge multimedia databases This book is devoted to partially solving the above issues Compression is useful because it helps reduce the consumption of expensive resources such as hard disk space and transmission bandwidth On the downside compressed data must be decompressed to be used and this extra processing may be detrimental to some applications 3D polygonal mesh with geometry color normal vector and texture coordinate information as a common surface representation is now heavily used in various multimedia applications such as computer games animations and simulation applications To maintain a convincing level of realism many applications require highly detailed mesh models However such complex models demand broad network bandwidth and much storage capacity to transmit and store To address these problems 3D mesh compression is essential for reducing the size of 3D model representation

Reconfigurable Computing: Architectures, Tools and Applications Pedro C. Diniz, Eduardo Marques, Koen Bertels, Marcio Merino Fernandes, Joao M.P. Cardoso, 2007-06-04 This book constitutes the refereed proceedings of the Third International Workshop on Applied Reconfigurable Computing ARC 2007 held in Mangaratiba Brazil in March 2007 The 27 full papers and 10 short papers presented together with a late comer contribution from ARC 2006 are organized in topical sections on architectures mapping techniques and tools arithmetic and applications
