Manage For The Long Term Present:

Alternative Strategies for the Long-Term Management and Use of Depleted Uranium Hexafluoride, Programmatic EIS [KY,TN,OH] Paducah Site, McCracken County, KY; Portsmouth Site, Pike County, OH and K-25 Site on the Oak Ridge Reservation, Anderson County ,1999 Managed Realignment : A Viable Long-Term Coastal Management Strategy?
Luciana S. Esteves,2014-07-14 Managed realignment has been a preferred coastal management strategy in England in the 21st century and has also been increasingly implemented elsewhere Climate change and environmental and financial concerns have led to a shift from the traditional hold the line approach of coastal protection towards more flexible soft engineering options Managed realignment is a relatively new soft engineering alternative aiming to provide sustainable flood risk management with added environmental and socio economic benefits by creating space for coastal habitats to develop more dynamically The natural adaptive capacity of coastal habitats and the ecosystem services they provide underpin the sustainability of managed realignment However many definitions of managed realignment exist and the understanding of what the term actually represents in practice has evolved through time and varies regionally This book clarifies the definitions and terminology used in the literature and proposes that managed realignment is used as a general term that encompasses the many different methods of implementation worldwide including removal breach and realignment of defences controlled tidal restoration which includes regulated tidal exchange and controlled reduced tide and managed retreat These methods of implementation are explained and illustrated with examples from around the world In addition to a general overview of emerging policies and current practices specific chapters discuss approaches adopted in different locations including the Netherlands the UK and Maui USA The UK experience is presented from the perspectives of three sectors the National Trust a charity organisation that owns 10% of the coastline of England and Wales the Environment Agency the organisation responsible for implementing government policy concerning flood and erosion risk and a private consultant involved in the planning design and delivery of managed realignment projects Taking a wider perspective to consider the range of implementation methods the viability of managed realignment as a long term coastal management strategy is discussed Recent national and regional strategies worldwide give managed realignment an increasing role in climate change and flood risk management Gaining stakeholders and public support is fundamental for the success of emerging coastal management strategies However public perception and stakeholders engagement are often cited as a factor limiting the wider uptake of managed realignment Results from a recent survey are used to benchmark the current thinking about the potential the performance and the limitations of managed realignment in the UK and elsewhere Current opinions about managed realignment are often not clearly defined partly due to many projects being relatively recent There is a general perception of great potential to provide sustainable flood risk management with added environmental benefits However the views of stakeholders are considerably more negative and notably contrast with the views of practitioners and

researchers The only clear and dominant agreement across all groups of respondents is that better understanding about the long term evolution of sites is needed *Long-Term Institutional Management of U.S. Department of Energy Legacy Waste Sites* National Research Council, Commission on Geosciences, Environment, and Resources, Board on Radioactive Waste Management, Committee on the Remediation of Buried and Tank Wastes, 2000-11-09 It is now becoming clear that relatively few U S Department of Energy DOE waste sites will be cleaned up to the point where they can be released for unrestricted use Long term stewardship activities to protect human health and the environment from hazards that may remain at its sites after cessation of remediation will be required for over 100 of the 144 waste sites under DOE control U S Department of Energy 1999 After stabilizing wastes that remain on site and containing them as well as is feasible DOE intends to rely on stewardship for as long as hazards persist in many cases indefinitely Physical containment barriers the management systems upon which their long term reliability depends and institutional controls intended to prevent exposure of people and the environment to the remaining site hazards will have to be maintained at some DOE sites for an indefinite period of time The Committee on Remediation of Buried and Tank Wastes finds that much regarding DOE s intended reliance on long term stewardship is at this point problematic The details of long term stewardship planning are yet to be specified the adequacy of funding is not assured and there is no convincing evidence that institutional controls and other stewardship measures are reliable over the long term Scientific understanding of the factors that govern the long term behavior of residual contaminants in the environment is not adequate Yet the likelihood that institutional management measures will fail at some point is relatively high underscoring the need to assure that decisions made in the near term are based on the best available science Improving institutional capabilities can be expected to be every bit as difficult as improving scientific and technical ones but without improved understanding of why and how institutions succeed and fail the follow through necessary to assure that long term stewardship remains effective cannot reliably be counted on to occur Long Term Institutional Management of U S Department of Energy Legacy Waste Sites examines the capabilities and limitations of the scientific technical and human and institutional systems that compose the measures that DOE expects to put into place at potentially hazardous residually contaminated sites *Proposed Monument Resource Management Plan and Final Environmental Impact Statement* , 1984 *Environmental Management Technology-Development Program at the Department of Energy* Committee on Environmental Management Technologies, Commission on Geosciences, Environment and Resources, Division on Earth and Life Studies, National Research Council, 1996-04-12 This book provides the National Academy of Sciences 1995 review of the technology development program for the remediation of the Department of Energy s weapons complex facilities It makes scientific technical and programmatic recommendations to strengthen technology development within DOE and ensure that it meet its goals of cost effectiveness safety and decreased risk The recommendations address DOE s five focus areas landfill stabilization contaminant plume containment and remediation facility transitioning decommissioning and final
