and discusses the factors associated with these poor healing trajectories. These factors include age, chronic inflammation, phenotypic changes in such cells as macrophages, fibroblasts and keratinocytes, colder alkaline wound milieu, wound related hypoxemia and diabetes. Other factors implicated include reperfusion injury, poor patient compliance, presence of undiagnosed and therefore unmanaged biofilms and wound pain. The past decades have yielded reliable evidence based guidelines and standardized care but the healing of diabetic foot wounds continues to be unpredictable notwithstanding these advances while the recurrence rates are also high. The benefits of technology in wound diagnosis are evidence based and the use of this technology also features in guidelines. However the same argument cannot be extended to adjuvant devices to facilitate wound closure even though many devices potentially benefit wound healing. Chronic Wound Management describes how innovation is based on technology that itself informs evidence, the gap between the evidence available, the performance of technology and how do we bridge this gap. It reviews the lessons learnt from the COVID 19 pandemic and whether traditional medicine systems offer us real or imaginary benefits. Consequently this book is an important addition to the literature in the area and an essential read for all healthcare professionals working with these patients. *Management of Diabetes Mellitus* Debra Haire-Joshu, 1992. MANAGEMENT OF DIABETES MELLITUS is a comprehensive approach to diabetes care across the life span. It is distinctive in its interdisciplinary approach to diabetes self management, its focus on patient care and education appropriate to developmental stage and emphasis on the team approach to care with the patient as the primary team member. The text is divided into four main parts: a clinical overview of the components of diabetes care, special issues in diabetes management, diabetes care and education and management of diabetes across the life span.
