Management Of Aneurysmal Subarachnoid Hemorrhage:

Neurosurgical Management of Aneurysmal Subarachnoid Haemorrhage I.A. Langmoen, Tryggve Lundar, Rune Aaslid, Hans-J. Reulen, 1999-04-19 The small neck of the aneurysm afforded an easy surgical attack An ordinary flat silver clip was placed over the sac and tightly compressed obliterated it completely The clip was flush with the wall of the carotid artery The sac lateral to the silver clip was then picked up with the forceps and thrombosed by the electrocautery Walter Dandy reporting his successful operation of a posterior communicating aneurysm on March 23 1937 Walter Dandy's patient left the hospital in good health 2 weeks later and from his report one may gain the impression that the operation was an easy task Despite continuous developments during the following decades it was not until the introduction of the operating microscope and microsurgical techniques that surgical treatment was generally accepted During the microsurgical era surgical results have continued to improve due to diagnostical neuroanaesthesiological and microsurgical refinements and improved neurointensive care Endovascular obliteration has become an important treatment alternative but this has not been included in this particular volume The purpose of the present supplement of the ACTA NEUROCHIRURGICA is to review some of the elements in the neurosurgical management of patients with aneurysmal subarachnoid haemorrhage that are important for a successful outcome Professor Helge Nornes has been a major force in the development of new techniques and research strategies in this area for a number of years and has recently retired from the National Hospital in Oslo

Guidelines for the Management of Aneurysmal

Subarachnoid Hemorrhage American Heart Association, 1994 **Management of Subarachnoid Hemorrhage** Adel E. Ahmed Ganaw, Nissar Shaikh, Nabil A. Shallik, Marco Abraham E. Marcus, 2021-11-26 This book focuses on subarachnoid hemorrhage SAH describing in detail the neurophysiology anatomy epidemiology grading anesthesia management coiling and interventional treatment of this dangerous disease Written by leading international experts it highlights the state of the art techniques for the diagnosis and treatment non surgical and surgical of SAH and the clinical variations It also examines the reliability of the new techniques versus the standard clinical methods to predict problems related to SAH and its recent diagnosis and management The book starts with a brief discussion of the epidemiology of SAH cerebral circulation anatomy of brain blood vessels and neurophysiology related to this fatal disease Then in the following chapters it covers grading of subarachnoid hemorrhage anesthesia management of SAH treatment subarachnoid hemorrhage coiling and radiological intervention Lastly it explores surgical treatment of intracranial aneurysms in more detail and addresses complications critical care management and headache in SAH traumatic SAH and prognosis Featuring numerous images tables schema illustrations and videos the book is intended for junior and senior anesthesiologists neuroscientists intervention radiologists intensivists and neurosurgeons *Improving aneurysmal Subarachnoid hemorrhage management, what's new?* Massimo Del Sette, Emanuela Crobeddu, Marcello Egidi, Luca Valvassori, 2024-08-12 Aneurysmal subarachnoid hemorrhage aSAH still represents a significant cause of morbidity and mortality around the world and its outcome can be dramatically impacted by early and expert care SAH treatment comprises early neurosurgical or endovascular treatment of the ruptured aneurysm strategies to reduce further neurological injury and managing systemic complications In fact management of aSAH is a multidisciplinary issue and the current state of knowledge is in rapid evolution Nevertheless the guidelines are not up to date The last American aSAH guidelines were issued in 2012 and covered literature up until May 2010 and in 2013 members of the Guidelines Committee of the European Stroke Organization reviewed them from a European standpoint Since then considerable advances have been made in diagnostic methods surgical and endovascular techniques and clinical management paradigms Subarachnoid hemorrhage is still a relevant health problem and although its incidence varies among populations a quarter of patients affected by aSAH die and approximately half of survivors are left with some persistent neurological deficit Taking into account the fact that the prognosis of aSAH patients is affected by multiple factors and that some of them can be influenced by therapeutic strategies and management procedures we believe that there is a need to reassess which interventions provide the greatest benefit to patients **Subarachnoid Hemorrhage** Joshua B. Bederson, 1997 Readers of this book will find up to date presentations by experts from several medical specialities on the incidence clinical manifestations and neuropathology of Subarachnoid Hemorrhage SAH The various mechanisms of brain injury caused by SAH and detailed management strategies are presented Finally future directions are discussed

Controversies in Intensive Care Medicine Ralf Kühlen, 2008 In recent years many clinical interventions in intensive care medicine have been based on clear scientific evidence However at least as many clinical interventions still remain the subject of controversy either due to a lack of rigorous data or due to the existence of conflicting data In this book these controversies are discussed by experts of international renown in their respective fields The goal is twofold To provide us with a balanced and unbiased presentation of the subject explaining the different schools of thought relevant to the controversy To summarise the data with a clinically useful and valid recommendation for our practice Virtually all fields of intensive care medicine are covered in over 50 chapters dealing with controversies over treatment options in acute illness states organising and providing care for acutely ill patients as well as how to answer ethical questions arising in critical care medicine every day

Arterial Treatment of Neurological Diseases Shailendra Joshi, 2025-05-06 Drug delivery by

injecting them through arteries poses unique challenges The first attempts to treat malignant brain tumors by arterial injections were undertaken soon after World War II Yet the applications of arterial delivery in treating neurological diseases have not advanced significantly over the last seventy years Although arterial drug delivery is used to treat several neurological conditions its applications other than for localization of brain functions remain experimental and are unproven in robust scientific studies Over the last two decades interventional radiology has significantly advanced by developing catheter based devices but arterial drug development has largely been ignored This book makes the case for arterial drug development Unless drugs are developed explicitly for arterial injections the vast potential of arterial treatments of neurological diseases will remain untapped This multi author book brings together experienced researchers and clinicians to investigate various applications of arterial drug delivery for treating neurological diseases It s an essential resource for various medical subspecialties related to the field and to advance pharmacological and clinical research with this mode of drug delivery

Treatment-Related Stroke Alexander Tsiskaridze,Arne Lindgren,Adnan I. Qureshi,2016-12-01 Up to 15% of all strokes occur in hospitalized patients many of whom are there for surgical procedures or cardiac disorders Outcomes can be poor with high mortality possibly related to co morbidities and the complexities of hospital care Risk factors for in hospital stroke include specific operations and procedures such as cardiac surgery previous medical disorders especially a history of stroke or transient ischemic attack and certain physiological characteristics including fever and dehydration More rapid diagnosis and evaluation for interventional therapies is needed This major new book examines the causes of treatment related stroke in most hospital based situations Therapeutic approaches including interventional therapies and intra arterial thrombolysis are highlighted including experimental agents and interventions where other treatment possibilities are limited Increasing the awareness of such interventions is an important factor in reducing delays in the assessment of patients who have strokes while in hospital thus decreasing morbidity and reducing costs
