Modeling Farm Decisions For Policy Analysis:

Modeling Farm Decisions For Policy Analysis Kenneth H Baum, 2019-03-08 Microeconomic modeling has been an important tool for agricultural economists for several decades and promises to be important for addressing the research problems of the 1980s as well. This volume explores the possibilities for using micromodeling to analyze how individual farm businesses react to and are affected by farm policies. Although this purpose represents only one potential use of micro modeling, effective modeling for policy analysis necessitates a broad look from several historical, analytical, and institutional perspectives. The Micromodeling Conference held November 18-20, 1981, at Airlie House, Virginia, under the auspices of the U.S. Department of Agriculture's Economic Research Service and the Farm Foundation, reflected these concerns.

Agricultural Economics Research, 1985 **Journal of Agricultural Economics Research**, 1985 **Applications of Systems Approaches at the Farm and Regional Levels** P.S. Teng, M.J. Kropff, H.F.M. ten Berge, J.B. Dent, F.P. Lansigan, H.H. Van Laar, 2012-12-06 Systems approaches for agricultural development are needed to determine rational strategies for the role of agriculture in national development. Mathematical models and computer simulation provide objective tools for applying science to determine and evaluate options for resource management at field, farm, and regional scales. However, these tools would not be fully utilizable without incorporating social and economic dimensions into their application. The second international symposium, Systems Approaches for Agricultural Development, held in Los Baños, 6-8 December 1995, fostered this link between the bio-physical sciences and the social sciences in the choice of keynote papers and oral presentations, a selection of which is included in this book. The book's contents further reflect how systems approaches have definitely moved beyond the research mode into the application mode. The large number and high quality of interdisciplinary research projects reported from different parts of the globe to determine land use options that will meet multiple goals and yet sustain natural resource bases is a key indicator of this coming of age. At the farm level, where trade-off decisions between processes and products commodities feature strongly, much progress is also evident in the development of systems-based tools for decision making. This book will be of particular interest to all agricultural scientists and planners as well as students interested in multidisciplinary and holistic approaches for agricultural development. **Agricultural Finance Review**, 1989 *Mathematical Modeling in Agriculture* Sabyasachi Pramanik, Niranjanamurthy M., Ankur Gupta, Ahmed J. Obaid, 2024-10-16 The main goal of the book is to explore the idea behind data modeling in smart agriculture using information and communication technologies and tools to make agricultural practices more functional, fruitful, and profitable. The research in the book looks at the likelihood and level of use of implemented technological components with regard to the adoption of different precision agricultural technologies. To identify the variables affecting farmers' choices to embrace more precise technology, zero-inflated Poisson and negative binomial count data regression models were utilized. Outcomes from the count data analysis of a random sample of various farm operators show that various aspects including

farm dimension farmer demographics soil texture urban impacts farmer position of liabilities and position of the farm in a state were significantly associated with the approval severity and likelihood of precision farming technologies Farm management information systems FMIS have constantly advanced in complexity as they have incorporated new technology the most recent of which is the internet However few FMIS have fully tapped into the internet s possibilities and the newly developing idea of precision agriculture receives little or no support in the FMIS that are now being sold FMIS for precision agriculture must meet a few more criteria beyond those of regular FMIS which increases the technological complexity of these systems deployment in a number of ways In order to construct an FMIS that meet these extra needs the authors here evaluated various cutting edge web based methods The goal was to determine the requirements that precision agriculture placed on FMIS

Agricultural System Models in Field Research and Technology Transfer Lajpat R. Ahuja, Liwang Ma, Terry A Howell, 2016-04-19 Most books covering the use of computer models in agricultural management systems target only one or two types of models There are few texts available that cover the subject of systems modeling comprehensively and that deal with various approaches applications evaluations and uses for technology transfer

a guide to information and policy analysis for agricultural decision making in latin america and the caribbean , *Modelling the Efficiency of Family and Hired Labour* Prem Jung Thapa, 2017-11-01 This title was first published in 2003 The principal economic units in most developing countries are family based farm households Empirical models that recognize the dual role of the farm household as producer and consumer in a theoretically consistent manner are essential tools for policy analyses This book provides an important extension of the

conventional farm household model by developing an analytical framework that allows for efficiency differences between family and hired labour as inputs in farm production. The model is estimated with survey data from the southern lowland region of Nepal. The estimation strategy is a two-step process. The first step estimates a farm-level production function in which is embedded a test for heterogeneity between family and hired labour. The labour heterogeneity detected in the production function estimation is incorporated at the second step in the labour supply estimation in a theoretically consistent manner. The methodological novelty is to relate the shadow wage rate for family labour to the observed market wage rate for hired labour adjusted for the differential productivity of family and hired labour detected in the production function estimation.
