*Raising the Acceptance of Rank Reversing Redistributions* Patricia F. Zauchner, 2024-07-31 Redistribution is a major objective of welfare states In certain cases redistribution not only reduces the financial differences between some individuals or groups but also changes their positions in a financial ranking Prior studies have indicated that such rank reversals can reduce support for redistribution This book addresses this issue by arguing that if redistribution is aimed at meeting needs rather than promoting equality the negative effect of rank reversals on the acceptance of redistribution can be reduced The argument is first supported by a theoretical exploration which among others endeavors to incorporate a no reranking principle into the well established list of distributive justice principles It shows that although individuals may apply the no reranking principle the principle is normatively weak especially compared to the need principle The argument is further supported by evidence from an online third party dictator game in which each decision maker had to redistribute money between two other participants It varied whether those participants were above or below a specific needs threshold and whether a transfer would reverse ranks or not The results showed that when redistribution was required to satisfy the poorer person's needs the negative effect of rank reversals on the acceptance of redistribution almost vanished

Multi-Criteria Decision Making in Maritime Studies and Logistics Paul Tae-Woo Lee, Zaili Yang, 2017-10-24 This book describes a wide range real case applications of Multi Criteria Decision Making MCDM in maritime related subjects including shipping port maritime logistics cruise ports waterfront developments and shipping finance etc In such areas researchers students and industrialists in general felt struggling to find a step by step guide on how to apply MCDM to formulate effective solutions to solving real problems in practice This book focuses on the in depth analysis and applications of the most well known MCDM methodologies in the aforementioned areas It brings together an eclectic collection of twelve chapters which seek to respond to these challenges The book begins with an introduction and is followed by an overview of major MCDM techniques The next chapter examines the theory of analytic hierarchy process AHP in detail and investigates a fuzzy AHP FAHP approach and its capability and rationale in dealing with decision problems of ambiguous information Chapter 4 proposes a generic methodology to identify the key factors influencing green shipping and to establish an evaluation system for the assessment of shipping greenness In Chapter 5 the authors describe a new function of fuzzy Evidential Reasoning ER to improve the vessel selection process in which multiple criteria with insufficient and ambiguous information are evaluated and synthesized Chapter 6 presents a novel methodology by using an Artificial Potential Field APF model and the ER approach to estimate the collision probabilities of monitoring targets for coastal radar surveillance Chapter 7 develops the inland port performance assessment model IPPAM using a hybrid of AHP ER and a utility function The next chapter showcases a challenging approach

to address the risk and uncertainty in LNG transfer operations by utilizing a Stochastic Utility Additives UTA method with the help of the philosophy of aggregation disaggregation coupled with a robustness control procedure Chapter 9 uses Entropy and Grey Relation Analysis GRA to analyze the relative weights of financial ratios through the case studies of the four major shipping companies in Korea and Taiwan Evergreen Yang Ming Hanjin and Hyundai Merchant Marine Chapter 10 systemically applies modern heuristics to solving MCDM problems in the fields of operation optimisation in container terminals Arguing that bunkering port selection is typically a multi criteria group decision problem and in many practical situations decision makers cannot form proper judgments using incomplete and uncertain information in an environment with exact and crisp values in Chapter 11 the authors propose a hybrid Fuzzy Delphi TOPSIS based methodology with a sensitivity analysis Finally Chapter 12 deals with a new conceptual port performance indicators PPIs interdependency model using a hybrid approach of a fuzzy logic based evidential reasoning FER and a decision making trial and evaluation laboratory DEMATEL

**Toward a Theory of Governance** Jacques Lenoble, Marc Maesschalck, 2003-01-01 For more than a century Western democracies have struggled to keep faith with both economic efficiency and social justice Yet reconciliation of these factors remains as baffling as ever Among the many voices clamoring today for a theory of collective action we hear most often of the great chasm between legitimacy and efficiency It is the contention of the authors of this ground breaking book that these antinomies can be seen as distinct moments of application in the operation of normative judgement and that a reflexive treatment of norms of collective action by clarifying limitations in rules and beliefs allows us to develop mechanisms to correct the limiting effects of such judgements and act accordingly Drawing on and developing recent trends in the social sciences The Action of Norms presents a powerful new theory of governance with far reaching implications for the future of law the judiciary and justice itself Among the contributing modern ideas that are explained and developed as pillars of the authors thesis are the following critiques of the political theory of interest groups the economic theory of efficiency deliberative democracy rational choice theory the evolutionist debate learning process theory and the theory of risk Lenoble and Maesschalck achieve a remarkable synthesis of relevant thought about forms of social organization from Kant and Fichte through Hayek Rawls and Habermas to current theory and place it at the service of a new and effective theory of the norm that promises to greatly elucidate the role of law and legal practice in the continuing development of democratic institutions

**New Concepts and Trends of Hybrid Multiple Criteria Decision Making** Gwo-Hsiung Tzeng, Kao-Yi Shen, 2017-08-15 When people or computers need to make a decision typically multiple conflicting criteria need to be evaluated for example when we buy a car we need to consider safety cost and comfort Multiple criteria decision making MCDM has been researched for decades Now as the rising trend of big data analytics in supporting decision making MCDM can be more powerful when combined with state of the art analytics and machine learning In this book the authors introduce a new framework of MCDM which can lead to more accurate decision making Several real world cases will be included to illustrate the new hybrid approaches
