Munn,C.N. Ironside,2012-12-06 Nonlinear optics is a topic of much current interest that exhibits a great diversity Some publications on the subject are clearly physics while others reveal an engineering bias some appear to be accessible to the chemist while others may appeal to biological understanding Yet all purport to be non linear optics so where is the underlying unity The answer is that the unity lies in the phenomena and the devices that exploit them while the diversity lies in the materials used to express the phenomena This book is an attempt to show this unity in diversity by bringing together contributions covering an unusually wide range of materials preceded by accounts of the main phenomena and important devices Because of the diversity individual materials are treated in separate chapters by different expert authors while as editors we have shouldered the task of providing the unifying initial chapters

Most main classes of nonlinear optical solids are treated semiconductors glasses ferroelectrics molecular crystals polymers and Langmuir Blodgett films However liquid crystals are not covered Each class of material is enough for a monograph in itself and this book is designed to be an introduction suitable for graduate students and those in industry entering the area of nonlinear optics It is also suitable in parts for final year undergraduates on project work It aims to provide a bridge between traditional fields of expertise and the broader field of nonlinear optics *Contemporary Nonlinear Optics* Govind P.

Agrawal, Robert W. Boyd, 1992 This book provides an up to date account of current trends in nonlinear optics It is intended for researchers already engaged in the field of nonlinear optics It may also be used by graduate students due to its comprehensive coverage and pedagogical presentation *Introduction to non-Kerr Law Optical Solitons* Anjan

Biswas, Swapan Konar, 2006-11-10 Despite remarkable developments in the field a detailed treatment of non Kerr law media has not been published Introduction to non Kerr Law Optical Solitons is the first book devoted exclusively to optical soliton propagation in media that possesses non Kerr law nonlinearities After an introduction to the basic features of fiber optic com

*Nonlinear, Tunable and Active Metamaterials* Ilya V. Shadrivov, Mikhail Lapine, Yuri S. Kivshar, 2014-11-01 Metamaterials artificial electromagnetic media achieved by structuring on the subwave length scale were initially suggested for the negative index and superlensing They became a paradigm for engineering electromagnetic space and controlling propagation of waves The research agenda is now shifting on achieving tuneable switchable nonlinear and sensing functionalities The time has come to talk about the emerging research field of metadevices employing active and tunable metamaterials with unique functionalities achieved by structuring of functional matter on the subwave length scale This book presents the first systematic and comprehensive summary of the reviews written by the pioneers and top class experts in the field of metamaterials It addresses many grand challenges of the cutting edge research for creating smaller and more efficient photonic structures and devices *Contemporary Optoelectronics* Oleksiy Shulika, Igor Sukhoivanov, 2015-09-11 This book presents a collection of extended contributions on the physics and application of optoelectronic materials and metamaterials The book is divided into three parts respectively covering materials metamaterials and optoelectronic devices Individual chapters cover topics including phonon polariton interaction semiconductor and nonlinear organic materials metallic dielectric and gyrotropic metamaterials singular optics parity time symmetry nonlinear plasmonics microstructured optical fibers passive nonlinear shaping of ultrashort pulses and pulse preserving supercontinuum generation The book contains both experimental and theoretical studies and each contribution is a self contained exposition of a particular topic featuring an extensive reference list The book will be a useful resource for graduate and postgraduate students researchers and engineers involved in optoelectronics photonics quantum electronics optics and adjacent areas of science and technology
