Modern Invention Of Information:

The Modern Invention of Information Ronald E Day, 2008-02-20 In *The Modern Invention of Information Discourse History and Power* Ronald E Day provides a historically informed critical analysis of the concept and politics of information. Analyzing texts in Europe and the United States his critical reading method goes beyond traditional historiographical readings of communication and information by engaging specific historical texts in terms of their attempts to construct and reshape history. After laying the groundwork and justifying his method of close reading for this study Day examines the texts of two pre World War II documentalists Paul Otlet and Suzanne Briet. Through the work of Otlet and Briet Day shows how documentation and information were associated with concepts of cultural progress. Day also discusses the social expansion of the conduit metaphor in the works of Warren Weaver and Norbert Wiener. He then shows how the work of contemporary French multimedia theorist Pierre L vy refracts the earlier philosophical writings of Gilles Deleuze and Félix Guattari through the prism of the capitalist understanding of the virtual society. Turning back to the pre World War II period Day examines two critics of the information society Martin Heidegger and Walter Benjamin. He explains Heidegger's philosophical critique of the information culture's model of language and truth as well as Benjamin's aesthetic and historical critique of mass information and communication. Day concludes by contemplating the relation of critical theory and information particularly in regard to the information culture's transformation of history historiography and historicity into positive categories of assumed and represented knowledge.

Birth of Modern Facts James W. Cortada, 2023-01-09 For over twenty years James W Cortada has pioneered research into how information shapes society. In this book he tells the story of how information evolved since the mid nineteenth century. Cortada argues that information increased in quantity became more specialized by discipline e g mathematics science political science and more organized. Information increased in volume due to a series of innovations such as the electrification of communications and the development of computers but also due to the organization of facts and knowledge by discipline making it easier to manage and access. He looks at what major disciplines have done to shape the nature of modern information devoting chapters to the most obvious ones. Cortada argues that understanding how some features of information evolved is useful for those who work in subjects that deal with their very construct and application such as computer scientists and those exploring social media and most recently history. *The Birth of Modern Facts* builds on Cortada's prior books examining how information became a central feature of modern society most notably as a sequel to *All the Facts A History of Information in the United States since 1870* OUP 2016 and *Building Blocks of Society History Information Ecosystems and Infrastructures* R L 2021.

The Oxford Handbook of Early Modern European History, 1350-1750 Hamish Scott, 2015-07-23 This Handbook re-examines the concept of early modern history in a European and global context. The term early modern has been familiar especially in Anglophone scholarship for four decades and is securely established in teaching research and scholarly publishing. More recently however the unity implied in the

notion has fragmented while the usefulness and even the validity of the term and the historical periodisation which it incorporates have been questioned The Oxford Handbook of Early Modern European History 1350 1750 provides an account of the development of the subject during the past half century but primarily offers an integrated and comprehensive survey of present knowledge together with some suggestions as to how the field is developing It aims both to interrogate the notion of early modernity itself and to survey early modern Europe as an established field of study The overriding aim will be to establish that early modern is not simply a chronological label but possesses a substantive integrity Volume I examines Peoples and Place assessing structural factors such as climate printing and the revolution in information social and economic developments and religion including chapters on Orthodoxy Judaism and Islam
