Modern Methods Of Inducing Abortion:

Abortion and Contraception in Modern Greece, 1830-1967 Violetta Hionidou, 2020-05-15 The book examines the history of abortion and contraception in Modern Greece from the time of its creation in the 1830s to 1967 soon after the Pill became available. It situates the history of abortion and contraception within the historiography of the fertility decline and the question of whether the decline was due to adjustment to changing social conditions or innovation of contraceptive methods. The study reveals that all methods had been in use for other purposes before they were employed as contraceptives. For example, Greek women were employing emmenagogues well before fertility was controlled; they did so in order to put themselves right and to enhance their fertility. When they needed to control their fertility, they employed abortifacients, some of which were also emmenagogues, while others had been used as expellants in earlier times. Curettage was also employed since the late nineteenth century as a cure for sterility; once couples desired to control their fertility, curettage was employed to procure abortion. Thus, couples did not need to innovate but rather had to repurpose old methods and materials to new birth control methods. Furthermore, the role of physicians was found to have been central in advising and encouraging the use of birth control for health reasons, thus facilitating and speeding fertility decline in Greece. All this occurred against the backdrop of a state and a church that were at times neutral and at other times disapproving of fertility control. **Induced**

Abortion and Spontaneous Early Pregnancy Loss Igor Lakhno, 2020-04-22 This book is focused on the protection of female reproductive health. Artificial pregnancy termination is known to be associated with an increased risk of infertility, spontaneous pregnancy loss, and other gestational pathologies. Since family planning is a system for the prevention of unwanted pregnancy, the current situation of the spread of induced abortion in different parts of the world is analyzed. Early pregnancy loss is a wide-ranging problem in medicine, and habitual abortion is a real tragedy for women in their childbearing years. The different pathogenetic scenarios of spontaneous pregnancy termination are described, and the possible interventions for prevention contributing to beneficial outcomes are discussed.
