Numeral Philosophy A Study Of Numeral:

Research in History and Philosophy of Mathematics Maria Zack, Dirk Schlimm, 2020-01-02 This volume contains ten papers that have been collected by the Canadian Society for History and Philosophy of Mathematics Société canadienne d'histoire et de philosophie des mathématiques It showcases rigorously reviewed contemporary scholarship on an interesting variety of topics in the history and philosophy of mathematics from the seventeenth century to the modern era The volume begins with an exposition of the life and work of Professor Bolesław Sobociński It then moves on to cover a collection of topics about twentieth century philosophy of mathematics including Fred Sommers's creation of Traditional Formal Logic and Alexander Grothendieck's work as a starting point for discussing analogies between commutative algebra and algebraic geometry Continuing the focus on the philosophy of mathematics the next selections discuss the mathematization of biology and address the study of numerical cognition The volume then moves to discussing various aspects of mathematics education including Charles Davies's early book on the teaching of mathematics and the use of Gaussian Lemniscates in the classroom A collection of papers on the history of mathematics in the nineteenth century closes out the volume presenting a discussion of Gauss's Allgemeine Theorie des Erdmagnetismus and a comparison of the geometric works of Desargues and La Hire Written by leading scholars in the field these papers are accessible not only to mathematicians and students of the history and philosophy of mathematics but also to anyone with a general interest in mathematics [Numeral Philosophy](#) Albert Christy, 1928 *Kant: Studies on Mathematics in the Critical Philosophy* Emily Carson, Lisa Shabel, 2017-12-22 There is a long tradition in the history and philosophy of science of studying Kant's philosophy of mathematics but recently philosophers have begun to examine the way in which Kant's reflections on mathematics play a role in his philosophy more generally and in its development For example in the Critique of Pure Reason Kant outlines the method of philosophy in general by contrasting it with the method of mathematics in the Critique of Practical Reason Kant compares the Formula of Universal Law central to his theory of moral judgement to a mathematical postulate in the Critique of Judgement where he considers aesthetic judgment Kant distinguishes the mathematical sublime from the dynamical sublime This last point rests on the distinction that shapes the Transcendental Analytic of Concepts at the heart of Kant's Critical philosophy that between the mathematical and the dynamical categories These examples make it clear that Kant's transcendental philosophy is strongly influenced by the importance and special status of mathematics The contributions to this book explore this theme of the centrality of mathematics to Kant's philosophy as a whole This book was originally published as a special issue of the Canadian Journal of Philosophy **The Origin of Letters and Numerals** Phineas Mordell, 1914 *Boston Studies in the Philosophy of Science* Marx W. Wartofsky, 2012-12-06 The broad range of interdisciplinary concerns which are encompassed by the philosophy of science have this much in common 1 they arise from reflection upon the fundamental concepts the formal structures and the methodology of the sciences 2 they touch upon the characteristically philosophical questions of

ontology and epistemology in a unique way bringing to traditional conceptions the analytic apparatus of modern logic and the new content and conceptual models of active scientific investigations These sources are reflected in the present volume which consists of the major portion of the papers presented to the Boston Colloquium for the Philosophy of Science in the academic year 1961 1962 There is no central theme nor any dominant approach in this colloquium Initiated in 1960 as an inter university interdisciplinary faculty group the Colloquium is intended to foster creative and regular exchange of research and opinion to provide a forum for professional discussion in the philosophy of science and to stimulate the development of academic programs in philosophy of science in the colleges and universities of metropolitan Boston The base of the Colloquium is our philosophic and scientific community as broad and heterodox as the academic cultural and technological complex in and about this city The Colloquium has been supported in its first full year as an inter institutional cooperative association by a generous grant to Boston University from the U S National Science Foundation We are most grateful for this help
