Nutrition Cancer And You:

Nutrition, Cancer and You Susan Calhoun, Jane Bradley, 1997 Nutrition Cancer and You provides specific questions to ask of the medical professionals and it debunks some myths about eating. Written in easy to read terms not medical jargon this nutritional planning guide is a must for every cancer patient and care provider whether professional family or friend.

Cancer Nutrition and Recipes For Dummies Maurie Markman, Carolyn Lammersfeld, Christina T.

Loguidice, 2013-07-01 Fight cancer from the inside out. Cancer treatments such as surgery, chemotherapy and radiation can be as hard on the body as the disease itself and detailed nutritional advice is usually not part of the program. Yet eating the right foods can actually help lessen the strength of some of the most powerful symptoms of cancer and the side effects of treatment, allowing the patient to better fight the disease. Now Cancer Nutrition Recipes For Dummies is your trusted informative guide to fighting cancer from the inside out. Designed for cancer patients and their families, Cancer Nutrition Recipes For Dummies focuses on foods best tolerated during and that can ease side effects of cancer treatment. It also offers advice for menu planning, nutritional analysis, diabetic exchanges and much more. Serves as a guide for cancer nutrition before, during and after treatment. Gives you a wealth of easy, immediate steps to speed up the healing process through diet. Offers advice on treatment as well as solutions to common side effects like dehydration, fatigue and nausea. Enables cancer patients to put their strongest foot forward when starting treatment. Cancer Nutrition Recipes For Dummies targets those dealing with cancer and the loved ones who take care of them, aiding both parties in alleviating some of the side effects of the cancer treatment through change in diet.

Cancer and Nutrition J. Mason, G.

Nitenberg, 2000-07 Estimates suggest that approximately 35% of cancers are a consequence of suboptimal diet. In this publication, epidemiologists, basic scientists and clinicians review both the epidemiology and mechanistic aspects of nutrition in the prevention of lung, breast, colorectal and prostate cancer. Moreover, an update on the status of the European EPIC study is given. Protein-calorie malnutrition of a clinically significant degree is common among cancer patients and contributes significantly to both morbidity and mortality. Besides causing death solely from progressive cachexia, malnutrition leads to diminished cardiac performance, an increased susceptibility to infection and a diminished response to chemotherapy. Reversing or even attenuating this cachexia is an extremely problematic issue. Topics covered here include mechanisms by which malnutrition evolves in cancer patients, animal models of cancer wasting, controversial nutritional interventions in cancer patients and nutritional support in pediatric patients and bone marrow transplantation. It has become clear that nutritional oncology must be regarded as a part of oncology and that it should be integrated with genetics and molecular biology in the care of the cancer patient. This book will appeal to a wide spectrum of professionals concerned with the prevention and treatment of cancer, especially clinical and basic researchers and clinicians.
