

## Early medical nutrition (EN / PN)

### Early enteral nutrition

6) If oral intake is not possible, early EN (within 48 hours) in critically ill adult patients should be performed/initiated rather than delaying EN (R4, B, 100%)

7) If oral intake is not possible, early EN (within 48 hours) shall be performed/initiated in critically ill adult patients rather than early PN (R5, A, 100%)

8) Early EN should be performed

- in patients receiving extracorporeal membrane oxygenation (ECMO)
- in patients with traumatic brain injury
- in patients with stroke (ischemic or hemorrhagic)
- in patients with spinal cord injury
- in patients with severe acute pancreatitis
- in patients after gastrointestinal surgery
- in patients after abdominal aortic surgery
- in patients with abdominal trauma when the continuity of the GI tract is confirmed/restored
- in patients receiving neuromuscular blocking agents
- in patients managed in prone position
- In patients with open abdomen
- regardless of the presence of bowel sounds unless bowel ischemia or obstruction is suspected
- in patients with diarrhea

(R40, B, 96%)

### Early parenteral nutrition

9) Early and progressive PN can be provided instead of no nutrition in case of contraindications for EN in severely malnourished patients. (R7, O, 95%)

10) In patients who do not tolerate full dose EN during the first week in the ICU, the safety and benefits of initiating PN should be weighed on a case-by-case basis. (R20, GPP, 96%)

## **Nutrition In Medical Practice:**

**Nutrition and Medical Practice** Lewis A. Barness, Yank D. Coble, Donald Ian MacDonald, George Christakis, 2012-12-06  
All forms of life require food materials in certain minimum amounts to insure an active life and successful reproduction. Nutrition is concerned with what these materials are, how they function, what effects they have when absent, and what happens to them when ingested. During the past two centuries, such nutritional disorders as scurvy, beriberi, rickets, and pellagra have been discovered, successfully treated, and eradicated by physicians in developed countries. In this century, such noted researchers as Rose, Meyerhof, and Krebs have contributed enormously to the field of nutrition. Currently, research is evolving new concepts and facts so rapidly that the average practitioner can hardly keep current even in his own field of medicine. Bona fide research by universities and governmental agencies has produced voluminous information, much of which seems contradictory and therefore tends to confuse the general public, particularly in the area of potential carcinogens. This confusion has prompted consumer groups, politicians, and social welfarists to bring pressures and demands on medical schools and practitioners of medicine to increase their knowledge and concern in the field of nutrition. Taking advantage of and adding to this confusion are the health food faddists and cultists, some only for monetary gain and others with a real religious zeal.

**Nutrition in Medical Practice** Robert Edgar Hodges, Raymond D. Adelman, 1980 Abstract The traditional curriculum in American medical schools neglects nutrition education. The scatter approach of acquiring nutrition education from peripheral sources during medical school and in active practice is inadequate. The book is organized as an accessible overview of the nutritional aspects of medical practice as they apply to major organ systems. The need for courses in applied nutrition for medical students is emphasized.
