Abstract: Nutritional and inflammatory disorders are factors that increase the risk of adverse clinical outcomes and mortality in elderly hemodialysis (HD) patients. This study aimed to examine nutritional and inflammation status as well as body composition in older adults on HD compared to matched controls. A case–control study was conducted on 168 older participants (84 HD patients (cases) and 84 controls) age- and sex-matched. Demographic, clinical, anthropometric, and laboratory parameters were collected from medical records. The primary outcome was nutritional status assessment using a combination of nutritional and inflammatory markers along with the geriatric nutritional risk index (GNRI). Sarcopenic obesity (SO) was studied by the combined application of anthropometric measures. Body composition and hydration status were assessed by bioelectrical impedance analysis (BIA). Univariate and multivariate regression analyses were performed to identify nutritional and inflammatory independent risk indicators in elderly HD patients and controls. A significantly high prevalence of nutritional risk measured by the GNRI was found in HD patients (32.1%) compared to controls (6.0%) ($p < 0.001$). Elderly HD patients were overweight and had lower percent arm muscle circumference, phase angle (PA), serum albumin (s-albumin), as well as higher percent extracellular body water (ECW%) and serum C-reactive protein (s-CRP) than controls (all at least, $p < 0.01$). SO was higher in HD patients (15.50%) than in controls (14.30%). By multi-regression analyses, age < 75 years (OR: 0.119; 95%CI: 0.006 to 0.388), ECW% (OR: 1.162; 95%CI: 1.061 to 1.273), PA (OR: 0.099; 95%CI: 0.036 to 0.271), as well as BMI, s-albumin ≥ 3.8 g/dL, and lower s-CRP were independently related between cases and controls (all at least, $p < 0.05$). Elderly HD patients had increased nutritional risk, SO, inflammation, overhydration, and metabolic derangements compared to controls. This study highlights the importance of identifying nutritional risk along with inflammation profile and associated body composition disorders in the nutritional care of elderly HD patients. Further studies are needed to prevent nutritional disorders in elderly HD patients.

1. Introduction

The global aging of the population, with special attention to the elderly, favors the development of chronic non-communicable diseases and nutritional disorders. By the mid-century, the world's population over the age of 65 is expected to increase from 10% in 2022 to 16% in 2050 [1].

Chronic kidney disease (CKD) represents a growing public health problem in the world's aging population. The number of people receiving renal replacement therapy (RRT) is expected to reach 5439 million dialysis patients by 2030 [2]. The most common

Barness,Yank D. Coble,Donald Ian MacDonald,George Christakis,2012-12-06 All forms of life require food materials in certain minimum amounts to insure an active life and successful reproduction Nutrition is concerned with what these materials are how they function what effects they have when absent and what happens to them when ingested During the past two centuries such nutritional disorders as scurvy beriberi rickets and pellagra have been discovered successfully treated and eradicated by physicians in developed countries In this century such noted researchers as Rose Meyerhof and Krebs have

contributed enormously to the field of nutrition. Currently research is evolving new concepts and facts so rapidly that the average practitioner can hardly keep current even in his own field of medicine. Bona fide research by universities and governmental agencies has produced voluminous information much of which seems contradictory and therefore tends to confuse the general public particularly in the area of potential carcinogens. This confusion has prompted consumer groups, politicians and social welfarists to bring pressures and demands on medical schools and practitioners of medicine to increase their knowledge and concern in the field of nutrition. Taking advantage of and adding to this confusion are the health food faddists and cultists, some only for monetary gain and others with a real religious zeal.

Toxicological Risk Assessment and Multi-System Health Impacts from Exposure Aristidis M. Tsatsakis, 2021-08-01. *Toxicological Risk Assessment and Multisystem Health Impacts From Exposure* highlights the emerging problems of human and environmental health attributable to cumulative and multiple sources of long term exposure to environmental toxicants. The book describes the cellular, biological, immunological, endocrinologic, genetic and epigenetic effects of long term exposure. It examines how the combined exposure to nanomaterials, metals, pharmaceuticals, multifrequency radiation, dietary mycotoxins and pesticides accelerates ecotoxicity in humans, animals, plants and the larger environment. The book goes on to also offer insights into mixture risk assessments, protocols for evaluating the risks and how this information can serve the regulatory agencies in setting safer exposure limits. The book is a go to resource for scientists and professionals in the field tackling the current and emerging trends in modern toxicology and risk assessment. Bridges basic research with clinical, epidemiological, regulatory and translational research conveying both an introductory understanding and the latest developments in the field. Evaluates real life human health risk assessment for long term exposures to xenobiotic mixtures and the role they play in contributing to chronic disease. Discusses advances in predictive in silico toxicology tools and the benefits of using omics technologies in toxicology research.

The Importance of Vitamins to Human Health J.A. Taylor, 2012-12-06. The Kellogg Company ranks among the world's leading food manufacturers and it follows therefore that our corporate policies are important to human health. Indeed food manufacturers as a combined industrial force must bear a major responsibility for the health of mankind because commercially processed foods are increasingly an indispensable part of the mosaic of human nutrition. This is particularly true in advanced industrialised societies. Here in Great Britain 40% of the people live in major conurbations and 41 % of the food they eat is either pre cooked or preserved, compounded or frozen, dehydrated or concentrated or modified in some other way to satisfy a consumer need or preference. These preferences are communicated to the manufacturer through the competitive forces of the market and are then translated into products in their most attractive and saleable form. However it is questionable how far consumer choice, depending largely on sight and taste, can be relied upon to ensure a correctly balanced and nutritionally adequate diet. The probable answer is that if we all relied solely on our senses and our appetites many of us would be suffering from some form of nutritional imbalance. A serious nutritional responsibility

therefore rests with the modern food manufacturer We at Kellogg s are conscious of the need not only to make the foods we produce attractive to the purse and palate but to ensure that they make a sound contribution in nutritional terms

Nutritional Status Assessment and its Links with Chronic Disease Prognosis and Surgical Outcomes Gabriela Villaça Chaves, Barbara Perez Vogt, Geórgia das Graças Pena, Rodolfo Espinoza, 2024-11-06 Nutritional disorders are related to poor health outcomes including longer hospital stays postoperative complications cancer treatment toxicity shorter survival and reduced quality of life The use of nutritional assessment tools for both diagnostic and outcome measure purposes has been widely explored However understanding of their responsiveness to nutritional interventions is still in its incipient stages There has been increasing awareness of the importance of nutritional screening and assessment especially the integration of skeletal muscle mass evaluation into clinical practice In this context a standardized definition of low muscle mass myosteatosis and muscle strength is still under debate Since there is no clear definition of proper cut off

points for each assessment tool the understanding and synthesis of the literature results are hindered Moreover the interplay among nutritional disorders has been under explored in literature research Efforts should be made to assess the association between comprehensive nutritional diagnosis and the prognosis of chronic diseases and surgical outcomes as most studies provide information on one feature of nutritional status and do not explore standardized nutritional assessment widely

Nutritional Value of Amaranth Viduranga Yashasvi Waisundara,2020-03-18 Pseudocereals belonging to the genus *Amaranthus* have been cultivated for their grains for 8 000 years or more The grain was a staple food of the Aztecs and was also considered an integral part of Aztec religious ceremonies The book primarily focuses on the nutrient properties of amaranth and expresses its viewpoint in considering this crop as a remedy for many nutrient deficiencies and curbing food insecurity The functional properties of the grain are immense and it is clear that the crop would be a valuable agricultural product around the world

Daily and Nocturnal Hemodialysis Robert M. Lindsay,2004-01-01 As the frequency of hemodialysis sessions has always been a concern it is not astonishing that interest in quotidian daily hemodialysis appears to be growing worldwide The main reasons for more frequent dialysis are to maximize well being and minimize both intra and interdialytic symptoms as well as to improve the treatment of patients with severe underlying medical problems particularly cardiovascular disease Moreover studies also indicate overall potential cost savings as compared with current conventional hemodialysis There are two options available namely short daily and long nightly treatments The main difference centers on the ability of the nightly regimen to remove greater amounts of phosphate and beta 2 microglobulin Even so there is no doubt that both treatments are highly preferable to conventional three times weekly dialysis Further issues which are discussed include the requirements necessary to run dialysis programs vascular access requirements and the management of complications and risks such as calcium and phosphorus control This is the first publication devoted solely to daily hemodialysis therapies Concentrating on clinical and technical issues it is an important contribution to the practical development of daily hemodialysis and is highly recommended to nephrologists nurses managers of renal programs and others involved in renal care
