Plant Growth Substances 1988:

Plant Growth Substances 1988 Richard P. Pharis, Stewart B. Rood, 2012-12-06 The 13th International Conference on Plant Growth Substances was held from the 17th to the 26th July 1988 in Calgary Alberta Canada under the auspices of the IPGSA International Plant Growth Substances Association and the University of Calgary Over 550 participants from all over the world attended along with 70 Associates and 25 University of Calgary graduate students who assisted in audiovisual presentations when not attending the scientific sessions Fine weather prevailed as was usual for summer on the eastern slopes of the Canadian Rockies and participants arriving early visited the famous Calgary Stampede A hosted buffet opened the Conference on Sunday evening On Wednesday evening following an afternoon field trip into the mountains of the Kananaskis Valley the IPGSA traditional banquet became a western barbecue on Richards Ghost River Ranch in the foothills of the Rockies with folk and country and western music provided by the Great Western Orchestra The fine Alberta weather continued through the weekend and the Conference ended with a field trip to Sun Shine Meadows a World Heritage Site in Banff National Park

Progress in Plant Growth Regulation C.M. Karssen, L.C. van Loon, D. Vreugdenhil, 2012-12-06 The current growing interest of molecular biologists in plant hormone research is undoubtedly the most promising development of recent times Many papers were presented during the 14th International Conference on Plant Growth Substances illustrating the impact of this new approach on our understanding of hormone controlled processes The specific character is the integrated study of plant growth regulation at all levels ranging from single molecules to the entire plant and its functioning in the environment Hormones play an essential role in the regulation but not an exclusive one Other compounds and factors such as Ca^{2+} for instance are often of equal relevance because they may take part in the signal transduction pathway Moreover regulation of the regulator by non hormonal factors is an essential part of any control mechanism The present volume reflects the change in interest from plant growth substances to plant growth regulation

Mechanisms of Plant Growth and Improved Productivity Modern Approaches Amarjit Basra, 2021-04-29 Discusses the mechanisms of plant productivity and the factors limiting net photosynthesis describing techniques to isolate characterize and manipulate specific plant genes in order to enhance productivity The uptake of carbon and the practical aspects of plant nutrition are discussed

Annual Plant Reviews, The Gibberellins Peter Hedden, Stephen G. Thomas, 2016-03-11 First discovered as fungal metabolites the gibberellins were recognised as plant hormones over 50 years ago They regulate reproductive development in all vascular plants while their role in flowering plants has broadened to include also the regulation of growth and other developmental processes This timely book covers the substantial and impressive recent advances in our understanding of the gibberellins and their roles in plant development including the biosynthesis inactivation transport perception and signal transduction of these important hormones An introductory chapter traces the history of gibberellin research describing the many discoveries that form the basis for the recent progress The exciting emerging evidence for the

interaction of gibberellin signalling with that of the other hormones is critically evaluated The occurrence of gibberellins in fungal bacterial and lower plant species is also discussed with emphasis on evolution Manipulation of gibberellin metabolism and signal transduction through chemical or genetic intervention has been an important aspect of crop husbandry for many years The reader is presented with important information on the advances in applying gibberellin research in agriculture and horticulture Annual Plant Reviews Volume 49 The Gibberellins is an important resource for plant geneticists and biochemists as well as agricultural and horticultural research workers advanced students of plant science and university lecturers in related disciplines It is an essential addition to the shelves of university and research institute libraries and agricultural and horticultural institutions teaching and researching plant science

Cytokinins David W. S. Mok, 2019-07-23 Cytokinins are hormones involved in all aspects of plant growth and development and are essential for in vitro manipulation of plant cells and tissues Much information has been gathered regarding the chemistry and biology of cytokinins while recent studies have focused on the genetics and cytokinin related genes However other than proceedings of symposia no single volume on cytokinins has been written This book is the first of its kind homing in on the key subject areas of cytokinin chemistry biosynthesis metabolism activity function genetics and analyses These areas are comprehensively reviewed in individual chapters by experts currently active in the field In addition a personal history on the discovery of cytokinin is presented by Professor Folke Skoog This volume summarizes previous findings and identifies future research directions **1988-89**

NASA Space/gravitational Biology Accomplishments, 1990 *NASA Technical Memorandum*, 1991 *Plant Physiology* 10 F.C. Steward, 2012-12-02 Plant Physiology A Treatise Volume X Growth and Development explores the physiology of plant growth and development considering the morphogenesis and morphogenetic systems dormancy environmental cues in plant growth and development plant senescence the role of hormones in growth regulation cell division and growth and development in space This volume is organized into eight chapters and begins with an introduction to morphogenesis as a developmental phenotype emphasizing the cell and the shoot The next chapters cover events in the life of the plant reflecting the importance of the whole plant concept to the subject and the ways in which these events are controlled and integrated into environmental signals and events An experimental approach to a model system for dormancy is described and then the discussion shifts to senescence and death of plants as aspects of plant development This volume also presents a clear and illuminating overview of the major plant growth regulators and their modes of action This book also introduces the reader to cell division and its effect on most major developmental events after fertilization along with the genetic analysis of development and its control by genes The final chapter focuses on the integration of plant growth studies with the technology of space travel which permits analysis of plant behavior in the complete absence of gravity This book is intended for researchers students and specialists in related fields who wish to gain insight on the concepts and research trends in plant growth and development

Gibberellins Nobutaka Takahashi, Bernard O. Phinney, Jake

MacMillan,2012-12-06 The cultivation of rice in Japan has suffered from damage caused by baka nae disease in which rice seedlings show abnormal growth elongation as the result of infection by a plant pathogen Investigation of the taxonomy of this pathogen led to the commencement of gibberellin GA research among Japanese plant pathologists who later identified it as *Gibberella jujikuroi* its other name being *Fusarium moniliforme* In 1926 Kurosawa demonstrated the occurrence of an active principle in the culture media of fungus that showed the same symptoms as those of the rice disease In 1938 this finding was followed by the successful isolation of the active principles as crystals from the culture filtrate This was achieved by the Japanese agricultural chemists Yabuta and Sumiki of The University of Tokyo who named these active principles gibberellins A and B Following World War II this discovery attracted the interest of scientists around the world and research on GA was pursued on a worldwide scale One of the most outstanding discoveries in GA research after the isolation of GA as the metabolite of the plant pathogen must be the isolation and characterization of GAs from tissues of higher plants by the MacMillan group West and Phinney and the Tokyo University group in 1958 and 1959 Thus GAs have been recognized as one of the most important classes of plant hormones

Advances in Plant Cold Hardiness Paul H. Li,2018-01-10 *Advances in Plant Cold Hardiness* provides a detailed up to date discussion of plant cold hardiness research The molecular mechanisms of plant cold hardiness development a subject not covered in any other low temperature stress book is examined in depth Other major topics addressed include the freezing tolerance and injury of plant tissues in vivo and in vitro in addition to how research findings impact agricultural applications The articles featured in *Advances in Plant Cold Hardiness* were presented as key papers at the 4th International Plant Cold Hardiness Seminar held at the Swedish University of Agricultural Sciences in Uppsala in July 1991 The book will appeal to all researchers students and instructors in plant biology agriculture and forestry

Progress in Botany H.-Dietmar Behnke,Karl Esser,Klaus Kubitzki,Michael Runge,Hubert Ziegler,2012-12-06

Plant Stems ,1995-07-19 Stems of various sizes and shapes are involved in most of the organic processes and interactions of plants ranging from support transport and storage to development and protection The stem itself is a crucially important intermediary it links above and below ground organs connecting roots to leaves An international team of leading researchers vividly illustrate that stems are more than pipes more than simple connecting and supporting structures rather stems are critical anatomically distinct structures of enormous variability It is to an unappreciated extent this variability that underpins both the diversity and the success of plants in myriad ecosystems *Plant Stems* will be a valuable resource on form function relationships for researchers and graduate level students in ecology evolutionary biology physiology development genetics agricultural sciences and horticulture as they unravel the mechanisms and processes that allow organisms and ecosystems to function Syntheses of structural physiological and ecological functions of stems Multiple viewpoints on how stem structure relates to performance Highlights of major areas of plant biology long neglected

Signals and Signal Transduction Pathways in Plants Klaus Palme,2012-12-06 Plants offer exciting opportunities to understand major

biological questions i.e the regulation of development and morphogenesis How are changes of the environment developmental cues and other signals perceived and transduced in physiological responses What are the elements of plant signalling pathways and what is their organization The panoply of molecular tools and techniques as well as the blossoming field of plant genetics are providing an exciting ground for major breakthroughs in unravelling the fundamental mechanisms of plant signalling The present book establishes a state of the art framework spanning the wide spectrum of perception signal transduction events and transport processes including cell proliferation and cell cycle regulation embryogenesis and flowering Moreover the volume emphasizes the role of the major plant signalling substances known to date the phytohormones and more recently studied substances and summarizes what we know on their molecular mechanisms of action The book emphasizes how the use of molecular technology has made plant signalling processes accessible to experimental test *Biochemistry and Molecular Biology of Plant Hormones* P.J.J. Hooykaas, M.A. Hall, K.R.

Libbenga, 1999-05-13 This book provides up to date coverage at an advanced level of a range of topics in the biochemistry and molecular biology of plant hormones with particular emphasis on biosynthesis metabolism and mechanisms of action Each contribution is written by acknowledged experts in the field providing definitive coverage of the field No other modern book covers this subject matter at such an advanced level so comprehensively It will be invaluable to university libraries and scientists in the plant biotechnology industries **Highlights of Nitrogen Fixation Research** Esperanza

Martínez, Georgina Hernández, 2012-12-06 For 31 years the North American Symbiotic Nitrogen Fixation Conference for merly Rhizobium Conference has been a forum for scientists and graduate students to discuss their research advances extending from basic aspects to agricultural applications and dealing with topics ranging from bacterial genetics and metabolism to plant genetics and physiology Nitrogen fixation being a major life supporting process on this planet has attracted the interest of researchers for more than one century Nitrogen fixation is responsible for the conversion of inert dinitrogen N₂ gas from the atmosphere into usable ammonia replacing the fixed nitrogen constantly being lost to the atmosphere by the denitrification process Worldwide agricultural productivity is determined by the availability of fixed nitrogen in all its forms which the continually increasing human population depends upon for survival An international momentum is developing in the use of biofertilizers to improve legume and non legume crop yields and in the study of genomics in this area New studies are being undertaken in several laboratories to study novel nitrogen fixing systems including non legume crops The North American Conferences on Symbiotic Nitrogen Fixation have periodically chronicled the advances in our knowledge of this area For the first time this conference was held in Mexico Thus all three North American countries have been hosts for this event This year conference brought nearly 200 scientists from 18 different countries presenting lectures and over 80 posters **Photoassimilate Distribution Plants and Crops Source-Sink Relationships**

Eli Zamski, Arthur A. Schaffer, 2017-09-29 Adopting an interdisciplinary approach to the study of photoassimilate partitioning

and source sink relationships this work details the major aspects of source sink physiology and metabolism the integration of individual components and photoassimilate partitioning and the whole plant source sink relationships in 16 agriculturally important crops The work examines in detail the components of carbon partitioning such as ecology photosynthesis loading transport and anatomy and discusses the impact of genetic environmental and agrotechnical factors on the parts of whole plant source link physiology

Plant Membranes Y.Y. Leshem,2013-03-09 The plasma membrane is at once the window through which the cell senses the environment and the portal through which the environment influences the structure and activities of the cell Its importance in cellular physiology can thus hardly be overestimated since constant flow of materials between cell and environment is essential to the well being of any biological system The nature of the materials moving into the cell is also critical since some substances are required for maintenance and growth while others because of their toxicity must either be rigorously excluded or permitted to enter only after chemical alteration Such alteration frequently permits the compounds to be sequestered in special cellular compartments having different types of membranes This type of homogeneity plus the fact that the wear and tear of transmembrane molecular traffic compels the system to be constantly monitored and repaired means that the membrane system of any organism must be both structurally complex and dynamic Membranes have been traditionally difficult to study because of their fragility and small diameter In the last several decades however remarkable advances have been made because of techniques permitting the bulk isolation of membranes from homogenized cells From such isolated membranes have come detailed physical and chemical analyses that have given us a detailed working model of membrane We now can make intelligent guesses about the structural and functional interactions of membrane lipids phospholipids proteins sterols and water

Plant Production on the Threshold of a New Century Paul C. Struik,Willem J. Vredenberg,Jan A. Renkema,Jan E. Parlevliet,2012-12-06 Plant Production on the Threshold of a New Century describes and compares problems and frontier developments in the different sectors of plant production integrating developments in basic plant sciences crop science and socioeconomic science leading to sustainable plant production Hence the book formulates goals and constraints in policy economy production environment and land use indicates how these goals and constraints may be translated into farming styles and cropping systems and describes how the fundamental plant sciences can contribute to the implementation

of such farming styles and cropping systems
