Matsumoto, 1997 Reviews the indications contra indications anatomical and technical considerations devices techniques potential pitfalls and complications associated with radiological procedures involving the non cardiac portions of the thorax The section on vascular interventions considers the basic vascular anatomy of the thorax acute pulmonary emboli transcatheter embolotherapy for hemoptysis endovascular therapy for pulmonary arteriovenous malformations and other topics Those in the non vascular section include biopsies of the lung mediastinum pleura breast managing pleural and non pleural fluid collections and managing esophageal strictures and foreign bodies Addressed to practicing radiologists Annotation copyrighted by Book News Inc Portland OR Mulliken and Young's Vascular Anomalies John B. Mulliken, Patricia E. Burrows, Steven J. Fishman, 2013-07 Based on the key concept that vascular anomalies can be classified separately as tumours or malformations this comprehensive and interdisciplinary volume furthers the understanding of the biological and behavioural differences of cutaneous vascular lesions *Optimal perioperative care for thoracoabdominal and descending thoracic aortic aneurysm repair: a review* Abraham Katz, Orlando R. Suero, Vicente Orozco-Sevilla, Ourania Preventza, Marc R. Moon, Joseph S. Coselli, Subhasis Chatterjee, 2023-01-06 In this review the authors discuss the perioperative management of patients who undergo thoracoabdominal aortic aneurysm or descending thoracic aortic aneurysm repair All major organ systems are potentially vulnerable to complications from these repairs meticulous preoperative attention to optimizing relevant comorbidities diligent performance of intraoperative anesthetic and surgical techniques and careful postoperative management are necessary to maximize the likelihood of successful outcomes Specific attention should be given to reducing the risk for spinal cord ischemia and for paraplegia Of note renal and respiratory systems are especially vulnerable to major complications and require a thoughtful multidisciplinary approach Because preventing complications is the primary goal of perioperative management deviations from the normal course must be recognized promptly and addressed aggressively to reduce the likelihood of major morbidity and death Interventional Radiology of the Spine J. Kevin McGraw, 2003-11-24 A panel of world renowned experts presents a complete course on evaluating and treating patients with back pain including interventional spinal procedures spinal imaging and the clinical evaluation of the spine patient The authors focus on all the critical spinal procedures ranging from such traditional methods as selective nerve root blocks epidural injections facet injections sacroiliac joint injections to such state of the art techniques as spinal biopsy percutaneous vertebroplasty spinal imaging nucleoplasty discography intradiscal electrothermal therapy and transcatheter therapy for tumors of the spine Additional material is provided on basic spinal anatomy CT MRI the nuclear medicine of the spine and the pharmacology of the medications used in injection procedures *Emergency Radiology* Borut Marincek, Robert F.
