Sea Dragons Richard Ellis,2003 In the days when dinosaurs dominated the earth their marine counterparts every bit as big and ferocious reigned supreme in prehistoric seas In this book Richard Ellis takes us back to the Mesozoic era to resurrect the fascinating lives of these giant seagoing reptiles fierce predators speculates on their habits and tells how they eventually became extinct or did they He traces the 200 million year history of the great ichthyosaurs plesiosaurs and mosasaurs who swam the ancient oceans and who may according to some still frequent the likes of Loch Ness animal that looked like a crocodile crossed with a shark the size of a small yacht With its impossibly long neck Plesiosaurus conybeari has been compared to a giant snake threaded through the body of a turtle At a length of nearly 60 feet Mosasaurus hoffmanni boasted powerful jaws that could crunch up even the hardest shelled giant sea turtle And Kronosaurus queenslandicus perhaps the most formidable of the lot had a skull nine feet long more than twice that of Tyrannosaurus rex with teeth to

match reconstruct their lives and habitats Their fossils have been found all over the world in Europe Australia Japan and even Kansas in lands that once lay on the floors of Jurassic and Triassic seas Along the way the book also provides intriguing insights into and entertaining tales about the work discoveries and competing theories that compose the world of vertebrate paleontology The text is also accompanied by Ellis own illustrations of how these creatures probably appeared and through these likenesses we are invited to speculate on their locomotion their predatory habits and their lifestyles
