Ecological Effects of Prescribed Fire Season Eric E. Knapp, 2010-10 Historical and prescribed fire regimes for different regions in the continental U S were compared and literature on season of prescribed burning synthesized In regions and vegetation types where considerable differences in fuel consumption exist among burning seasons the effects of prescribed fire season appears to be driven more by fire intensity differences among seasons than by phenology or growth stage of organisms at the time of fire Where fuel consumption differs little among burning seasons the effect of phenology or growth stage of organisms is often more apparent because it is not overwhelmed by fire intensity differences Species in ecosystems that evolved with fire appear to be resilient to one or few out of season prescribed burns Illus

**Fire and the Environment**, 1991 **Wildland Fire in Ecosystems**, 2008 This state of knowledge review of information on relationships between wildland fire and nonnative invasive plants can assist fire managers and other land managers concerned with prevention detection and eradication or control of nonnative invasive plants The 16 chapters in this volume synthesize ecological and botanical principles regarding relationships between wildland fire and nonnative invasive plants identify the nonnative invasive species currently of greatest concern in major bioregions of the United States and describe emerging fire

invasive issues in each bioregion and throughout the nation This volume can help increase understanding of plant invasions and fire and can be used in fire management and ecosystem based management planning The volume s first part summarizes fundamental concepts regarding fire effects on invasions by nonnative plants effects of plant invasions on fuels and fire regimes and use of fire to control plant invasions The second part identifies the nonnative invasive species of greatest concern and synthesizes information on the three topics covered in part one for nonnative invasives in seven major bioregions of the United States Northeast Southeast Central Interior West Southwest Coastal Northwest Coastal including Alaska and Hawaiian Islands The third part analyzes knowledge gaps regarding fire and nonnative invasive plants synthesizes information on management questions nonfire fuel treatments postfire rehabilitation and postfire monitoring summarizes key concepts described throughout the volume and discusses urgent management issues and research questions

**Grassland Management for Sustainable Agroecosystems** Abad Chabbi, Gianni Bellocchi, 2020-04-01 This book is a remarkable work that brings together the most recent international research on grassland management covering a broad range of topics and geographical areas The different contributions explore the complex relationships between landscape climate features and soil fertility with the support of observational data and modeling Clearly this is a wide and multifaceted area of research that opens up new prospects for the management of a biome which should no longer be considered only as a feed resource for domestic herbivore farming but also and above all as a source of ecosystem services to society and a contributor to the sustainability of agriculture Textbooks like this positively demonstrate the importance and significance of how grassland science when viewed in this way can make tangible the progress in understanding the complexity of grassland management and its current and future challenges

**Ecology and Conservation of Great Plains Vertebrates** Fritz L. Knopf, Fred B. Samson, 2013-04-17 The frontier images of America embrace endless horizons majestic herds of native ungulates and romanticized life styles of nomadic peoples The images were mere reflections of vertebrates living in harmony in an ecosystem driven by the unpredictable local and regional effects of drought fire and grazing Those effects often referred to as ecological disturbances are rather the driving forces on which species depended to create the spatial and temporal heterogeneity that favored ecological prerequisites for survival A landscape viewed by European descendants as monotony interrupted only by extremes in weather and commonly referred to as the Great American Desert this country was to be rushed through and cursed a barrier that hindered access to the deep soils of the Oregon country the rich minerals of California and Colorado and the religious freedom sought in Utah Those who stayed for lack of resources or stamina spent a century trying to moderate the ecological dynamics of Great Plains prairies by suppressing fires planting trees and exotic grasses poisoning rodents diverting waters and homogenizing the dynamics of grazing with endless fences all creating bound an otherwise boundless vista arises in Historically travelers and settlers referred to the area of tallgrasses along the western edge of the deciduous forest and extending midway across Kansas as the True Prairie The grasses thinned and became

shorter to the west an area known then as the Great Plains
