Looking Beneath The Surface The Story Of Archaeology In New Jersey:

Looking Beneath the Surface R. Alan Mounier, 2003 For more than ten thousand years humans have lived in New Jersey From Summit to Cape May from Trenton to the Jersey Shore the state is a treasure trove of archaeological artifacts revealing much about those who occupied the region prior to European settlement As a rule only the most durable of human creations 3 4 items of stone and pottery 3 4 survive the ravages of time To complicate matters the onslaught of our own culture and the indiscriminate looting of sites by greedy collectors have further diminished the cultural materials left behind The task of the archaeologist is to gather and interpret these scraps for the benefit of science and the public But digging up relics is a trivial pursuit if the only outcome is a collection of artifacts however attractive or valuable they may be Understanding what those relics mean in human terms is crucial In *Looking beneath the Surface* R Alan Mounier looks at the human past of New Jersey With particular focus on the ancient past and native cultures the author tells the story of archaeology in the state as it has unfolded and as it continues to unfold New investigations and discoveries continually change our views and interpretations of the past In jargon free language Mounier provides an in depth introduction offering information to understand general archaeological practices as well as research in New Jersey Subsequent chapters describe artifact types archaeological settlements and burial practices in detail He concludes with vignettes of twenty one archaeological investigations throughout the state to illustrate the variability of sites and the accomplishments of dedicated archaeologists both professional and amateur

Historical Archaeology of the Delaware Valley, 1600-1850 Richard Veit, David Orr, 2014-02-01 The Delaware Valley is a distinct region situated within the Middle Atlantic states encompassing portions of Delaware Pennsylvania New Jersey and Maryland With its cultural epicenter of Philadelphia its surrounding bays and ports within Maryland and Delaware and its conglomerate population of European settlers Native Americans and enslaved Africans the Delaware Valley was one of the great cultural hearths of early America The region felt the full brunt of the American Revolution briefly served as the national capital in the post Revolutionary period and sheltered burgeoning industries amidst the growing pains of a young nation Yet despite these distinctions the Delaware Valley has received less scholarly treatment than its colonial equals in New England and the Chesapeake region In Historical Archaeology of the Delaware Valley 1600 1850 Richard Veit and David Orr bring together fifteen essays that represent the wide range of cultures experiences and industries that make this region distinctly American in its diversity From historic period American Indians living in a rapidly changing world to an archaeological portrait of Benjamin Franklin

from an eighteenth century shipwreck to the archaeology of Quakerism this volume highlights the vast array of research being conducted throughout the region Many of these sites discussed are the locations of ongoing excavations and archaeologists and historians alike continue to debate the region's multifaceted identity The archaeological stories found within Historical Archeology of the Delaware Valley 1600 1850 reflect the amalgamated heritage that many American regions experienced though the Delaware Valley certainly exemplifies a richer experience than most it even boasts the palatial home of a king Joseph Bonaparte elder brother of Napoleon and former King of Naples and Spain This work thoroughly based on careful archaeological examination tells the stories of earlier generations in the Delaware Valley and makes the case that New England and the Chesapeake are not the only cultural centers of colonial America [The Archaeology of New Netherland](#) Craig Lukezic, John P. Archaeologies of Mobility and Movement Mary C Beaudry, Travis G. Parno, 2013-02-06 This collection of essays in *Archaeologies of Mobility and Movement* draws inspiration from current archaeological interest in the movement of individuals things and ideas in the recent past *Movement* is fundamentally concerned with the relationship's among time object person and space The volume argues that understanding movement in the past requires a shift away from traditional fieldwork based archaeological ontologies towards fluid trajectory based studies *Archaeology* by its very nature locates objects frozen in space literally in their three dimensional matrices at sites that are often stripped of people An archaeology of movement must break away from this stasis and cut new pathways that trace the boundary crossing contextuality inherent in object person mobility Essays in this volume build on these new approaches confronting issues of movement from a variety of perspectives They are divided into four sections based on how the act of moving is framed The groups into which these chapters are placed are not meant to be unyielding or definitive The first section *Objects in Motion* includes case studies that follow the paths of material culture and its interactions with groups of people The second section of this volume *People in Motion* features chapters that explore the shifting material traces of human mobility Chapters in the third section of this

book *Movement through Spaces* illustrate the effects that particular spaces have on the people and objects who pass through them Finally there is an afterward that cohesively addresses the issue of studying movement in the recent past At the heart of *Archaeologies of Mobility and Movement* is a concern with the hybridity of people and things affordances of objects and spaces contemporary heritage issues and the effects of movement on archaeological subjects in the recent and contemporary past

Acorns and Bitter Roots Timothy C. Messner, 2011-04

Starch grain analysis in the temperate climates of eastern North America using the Delaware River Watershed as a case study for furthering scholarly understanding of the relationship between native people and their biophysical environment in the Woodland Period

People regularly use plants for a wide range of utilitarian spiritual pharmacological and dietary purposes throughout the world

Scholarly understanding of the nature of these uses in prehistory is particularly limited by the poor preservation of plant resources in the archaeological record

In the last two decades researchers in the South Pacific and in Central and South America have developed microscopic starch grain analysis a technique for overcoming the limitations of poorly preserved plant material

Messner's analysis is based on extensive reviews of the literature on early historic prehistoric native plant use and the collation of all available archaeobotanical data a review of which also guided the author

in selecting contemporary botanical specimens to identify and in interpreting starch residues recovered from ancient plant processing technologies The evidence presented here sheds light on many local ecological and cultural developments as ancient people shifted their subsistence focus from estuarine to riverine settings These archaeobotanical datasets Messner argues illuminate both the conscious and unintentional translocal movement of ideas and ecologies throughout the Eastern Woodlands **Bulletin of the Archaeological Society of New Jersey** Archaeological Society of New Jersey,2007
